Chapter 1: Executive Summary

The Pune Sholapur Highway being managed by PSRDCL (An ITNL Group SPV) and the Company has mandated LSI Engineering & Consultants Ltd. to undertake detailed Technical Due Diligence of the Asset and advise the Company on Future Major Maintenance & O&M Costs.

In this regard, LSI has undertaken detailed study of the Project Highway including the study of existing & past secondary data as well as undertaking certain Field Investigations such as Condition Survey, Trial Pits, FWD Tests, etc.

Based on the detailed Analysis of data collected and field investigations conducted, the following is being concluded:

1.1 Major Maintenance:

a. The Pavement has been designed for a life of 10 years only and at some stage an additional 50mm DBM would be required to strengthen the pavement to meet the Design Traffic as stipulated at the time of conducting pavement design.

b. The FWD Data also suggest that the Pavement is nearing its design life

c. In the balance 13 years of Concession, two major overlay would be required in order to ensure reasonable quality of Service.

d. As the actual traffic has been lower than the estimated traffic, resulting in the extension of concession period by 4 years, immediate requirement of strengthening is not considered except for few stretches where Rutting has occurred.

e. It would therefore be necessary to strategically provide two or three overlay in such a manner so that immediate DBM requirement is eliminated.

f. Considering the above strategy, a Major Maintenance Plan has been recommended.

g. The Cost of such Major Maintenance on Main Carriageway would be Rs. 414.78 Crores while the NPV @12% discounting Rate for the same shall be Rs. 170.68 Crs.

h. On Service Road an Overlay is required immediately which shall require 3.322km of DBM and 58.346 Kms of BC.

i. Subsequently in 2034 another overlay shall be required in the entire 83.050km length.

j. The Cost of immediate overlay and DBM shall be Rs. 24.12 Crs and the Cost of future overlay shall be 43.73 Crs. It is proposed that half of the initial Maintenance amounting to Rs. 12.06 Crs, is undertaken in the current Financial Year (FY 2023-24) and the remaining cost (Rs.12.06 Crs) is incurred in FY 2024-25.

k. Thus the total Major Maintenance Cost on Service Road shall be Rs. 67.85 Crs while the NPV of the same shall be Rs. 31.01 Crs at 12% discounting rates.

l. In addition to the Pavement, there is no Major Maintenance envisaged as the all the structures and assets are in good condition and can be taken care of as part of Routine Maintenance.

1.2 O&M Costs:

a. The O&M Costs has been estimated based on first principles and has been found comparable with the current costs being incurred by the Company.

b. The Total Cost of FY 2023-24 works out to be Rs. 15.34 Crores. However, only 50% of the costs for FY 2023-24 & FY 2035-36 has been considered for the purpose of this analysis for a period between Oct 2023 to Mar 2024 & Apr 2035 to September 2035. Thus the Total Cost to be incurred on O&M is estimated as Rs. 285.03 Crores (NPV@12% 130.33 Crores) for the period between FY2023-24 – FY2035-36, while considering a price escalation of 5%.

1.3 Overall Costs:

The Overall Costs of the Project O&M including Major Maintenance Cost has been estimated to be Rs. 746.87 Crs which includes Major Maintenance Works on Main Carriageway as well as Service Roads along with comprehensive O&M Costs up to the end of Concession Period (2036-37) starting from 2023-24. The NPV of the same at 12% Discounting Rate is Estimated to Rs. 351.06 Crs.

The summary of Overall Maintenance Costs till 2036-37 is summarised below which includes all the major components of Operations & Maintenance including Major Maintenance (Overlay) of Main Carriageway as well as Service Road:

ITNL PSRDCL PUNE SHOLAPUR HIGHWAY

Chapter 2: Background

2.1 INTRODUCTION

National Highway No. 65 (Old NH 9) is one of the Major arteries of the road network system of the Country connecting the city of Peshwas, Pune with Solapur, the Second largest city of South Maharashtra. It traverses through four States viz., Maharashtra, Andhra Pradesh, Karnataka and Tamil Nādu. It connects a number of Major urban centers like Pune, Solapur, Hyderabad, etc. on its way to Machilipatnam. The start (km 0+000) of the Pune-Solapur Section of NH-65 is situated at Pune. Total Length of Highway 690 km.

Nearly 102.078 Km. long Project Highway section of NH-65, starts from Km. 150.050 near Bhima Nagar village on Pune side and traverses in a North-South direction and ends at 252.+200 near Solapur at Solapur by pass which is an existing 4 - lane divided toll road. In order to provide a better motorable road with improved level of service to the vehicular traffic, it was decided to augment the capacity of the Bhima Nagar (Km. 150.050) – Solapur (Km. 251.325) section of NH-65 in State of Maharashtra. The project highway was planned to be developed to four lane in most of the rural sections (Km 150+050 to km 235+000) while the urban section near Sholapur City including the Sholapur Bypass section was planned for widening to six lanes (Km 235+000 to Km 252+200). The above section is developed as partially access controlled toll-way.

This Project has been executed on the site, which is described in this report as per the development done in lines with the schedule – B & C of Concession agreement.

NHAI has appointed M/s K & J Projects Pvt. Limited as the Independent Consultant for the Project, and the scope includes performance and execution by the Concessionaire of all Design, Engineering, Financing, Procurement, Construction, Completion, Operation and Maintenance of the Project Highway. It includes Improvement, Operations, Maintenance, Rehabilitation and Strengthening of the Existing 2- lane road and widening it to a 4-lane divided Highway of Bhima Nagar-Solapur section of NH-65 from Km. 150.050 to Km. 252+200 in the State of Maharashtra on Design, Build, Finance Operate and Transfer (DBFOT) basis.

After completion of the project and undertaking Operation & Maintenance of the Project Highway post completion in 2013, the Company (PSRDCL) intends to transfer the asset to one of a Road INVIT Entity "Roadstar" and to this end the Company has mandated LSI Engineering & Consultants Ltd. to undertake detailed Technical Due

Diligence as well as the assessment of future Major Maintenance & O&M Costs by undertaking detailed Technical Evaluation of the Project Highway.

2.2 SCOPE OF SERVICES:

As mentioned above, LSI Engineering and Consultants ltd (LSIEC) has been mandated by Pune Sholapur Road development company limited (PSRDCL), to act as technical consultants for the preparation of the due diligence report for the project "design, engineering, construction, development, finance, operation and maintenance of 4 laning of Pune-Solapur section of NH-9 (new NH. 65) from km144.400 (new km 150.050) to km 249.000 (new km 252+200) in the state of Maharashtra".

The main objective of the study is to critically review the current status of project corridor including details pertaining to its construction and maintenance and to provide requisite technical information. The objective of the study can be broadly defined as follows:

2.2.1 Operations Phase:

- Undertake detailed reconnaissance to appreciate the Project corridor characteristics.
- Collection of relevant records and documents and critical review of same
- Undertake field investigations visual as well as test mentioned under asset condition assessment and to collect first-hand information on present condition of Project Road and establish the requirements for rehabilitation and up-gradation.
- Review of safety aspects.
- Undertake preliminary designs for immediate rehabilitation requirements based on condition assessment and Concession Agreement specifications.
- Prepare maintenance schedule for entire duration of concession period based on a technical analysis.
- Review and Preparation major maintenance cost schedule for the concession period.
- Study and highlight other relevant details like penalties, claims, petition, deviations etc. which may have impact on future maintenance and cost of project.

2.2.2 Asset Condition Assessment

- Assessment of road assets in conformance with specifications, standards and codes stipulated in Concession Agreement and O&M manual etc.
- A detailed inventory survey of road assets including main carriageway, structures, service roads, lightings, drains, road furniture including signage, MBCB, guard rails etc., other safety measures, toll collection infrastructure, buildings, plantation, vehicles and other objects. Comparison between requirement and actual availability at site on sampling basis based on the insurance of assets.
- Assessment of condition of the structures including but not limited to visual inspections of bearings, expansion joints, superstructure, substructures, foundations, associated components, pre-stress anchorages (if any)

2.2.3 Conducting following tests

- Trial pits for crust verification at every 15 kms
- Falling Weight Deflectometer (FWD) test of the stretch to ascertain the existing strength of the pavement. The frequency of the FWD will be as specified in the IRC.

2.2.4 Technical Analysis & Recommendations

- Assessment of condition of the road pavement including but not limited to visual inspections of the pavement, review as-built design and assess design assumptions and provide a detailed report thereon.
- Reviewing of test certificates & outcomes of past few years along with visual road condition
- Assessment of physical dimensions condition of the infrastructure to determine useful lives of the materials and equipment requiring rehabilitation and/or replacement.
- Critical review of Pavement Condition Survey to suggest the pavement condition and probable rehabilitation treatment.
- Preparation of detailed Pavement inspection report and analysis with chainages wise pavement condition and rectification strategies
- Pavement inspection report & rectification strategies to be provided in 100mtr interval for both MCW & SR (LHS & RHS side).

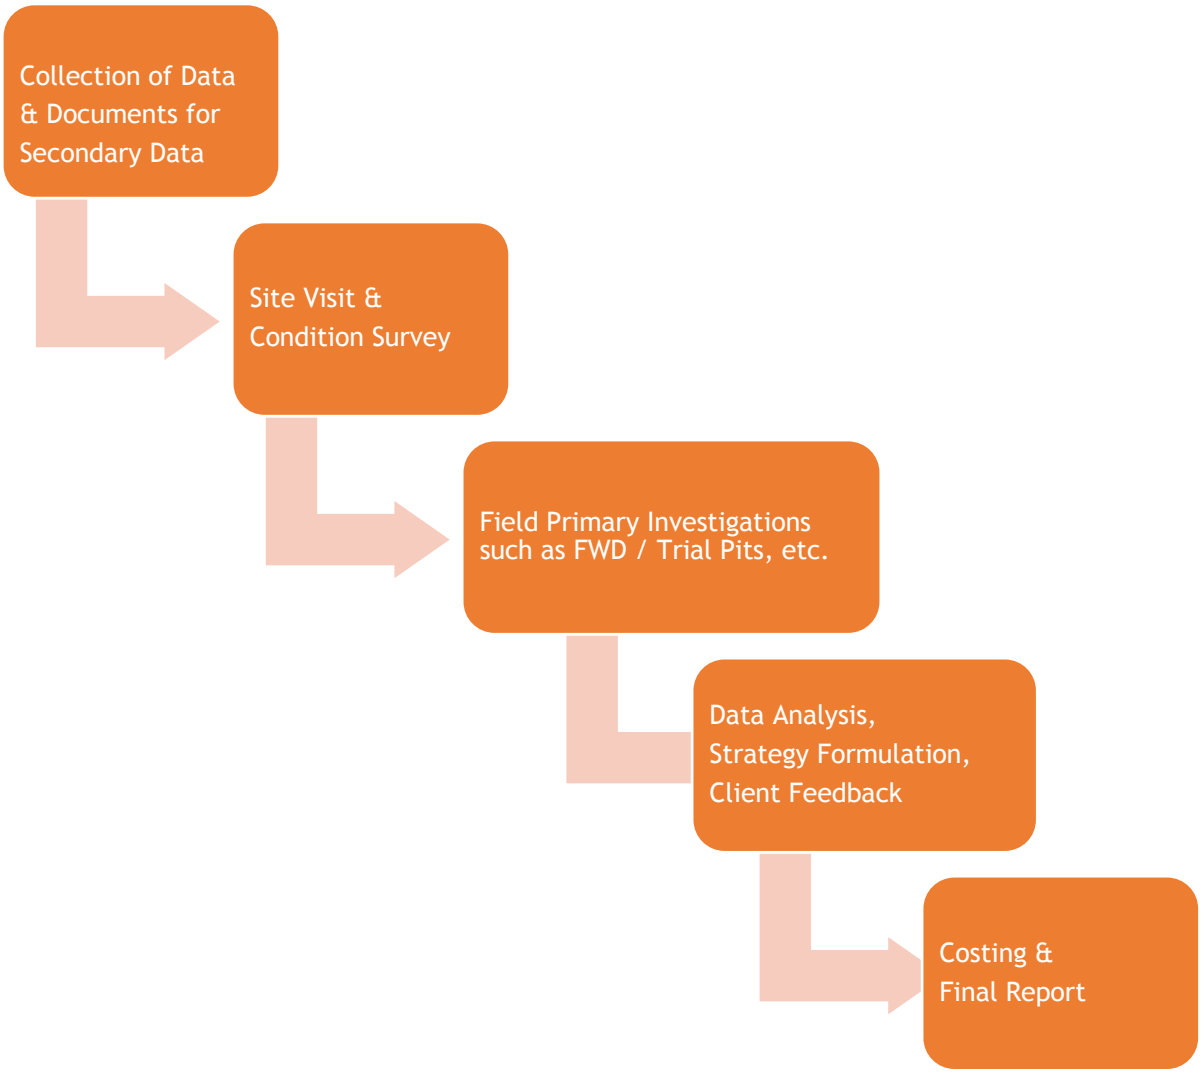
- In continuation to above point the existing Pavement need to be categorized as Good, Average, and Poor based on their estimated life span. For 5 years or more (Good), 2-5 years (Average), and less than 2 years (Poor).
- Recommendations for any major repair, rehabilitation and strengthening based on the condition survey and design reports.
- To provide a detailed photographic report of the infrastructure assets and its condition to withstand till end of concession period. Suggestion and cost evaluation for any additional repair/rectification /modification required.
- Determine the appropriate level and frequency of routine and major maintenance activities required to keep the road assets in good condition and to meet the performance and O&M standards, specifications, and requirements.
- Review the major maintenance work undertaken if any, and prepare projections for future.
- Major maintenance expenses (incl. any hand-back requirements), so as to ensure compliance with the terms of Concession Agreement
- Review of condition of SPV assets including ails equipment and vehicles etc.
- Review of past accidents reports, identification of black spots, deficiency of safety requirement if any and preparation of proposal to curb accidents and safety hazard to road users.
- Detailed major maintenance cost forecast along with estimation of costs towards handover requirements.
- Review availability of labour, material and machinery at the project site and provide an assessment of operational challenges involved, if any as well as estimated costs for these.

2.3 APPROACH AND METHODOOLGY

Our basic approach to the project is based on the fact that the operation and maintenance of the Project as conceived should be straightforward as long as the issues that arise from the complex interrelationships of the various players are well understood by all concerned. The understanding of the contracts and their implications, the respective roles of all parties concerned will be essential in the successful and smooth functioning of the Project, as these contractual relationships contain certain areas for potential conflict of interests.

Our approach to the project also will be to act similarly by providing sufficient details of the operation and maintenance phase and the relevant cost, of the Concessionaire.

The detailed methodology has already been captured in th Inception report submitted. The same can be broadly represented as below:

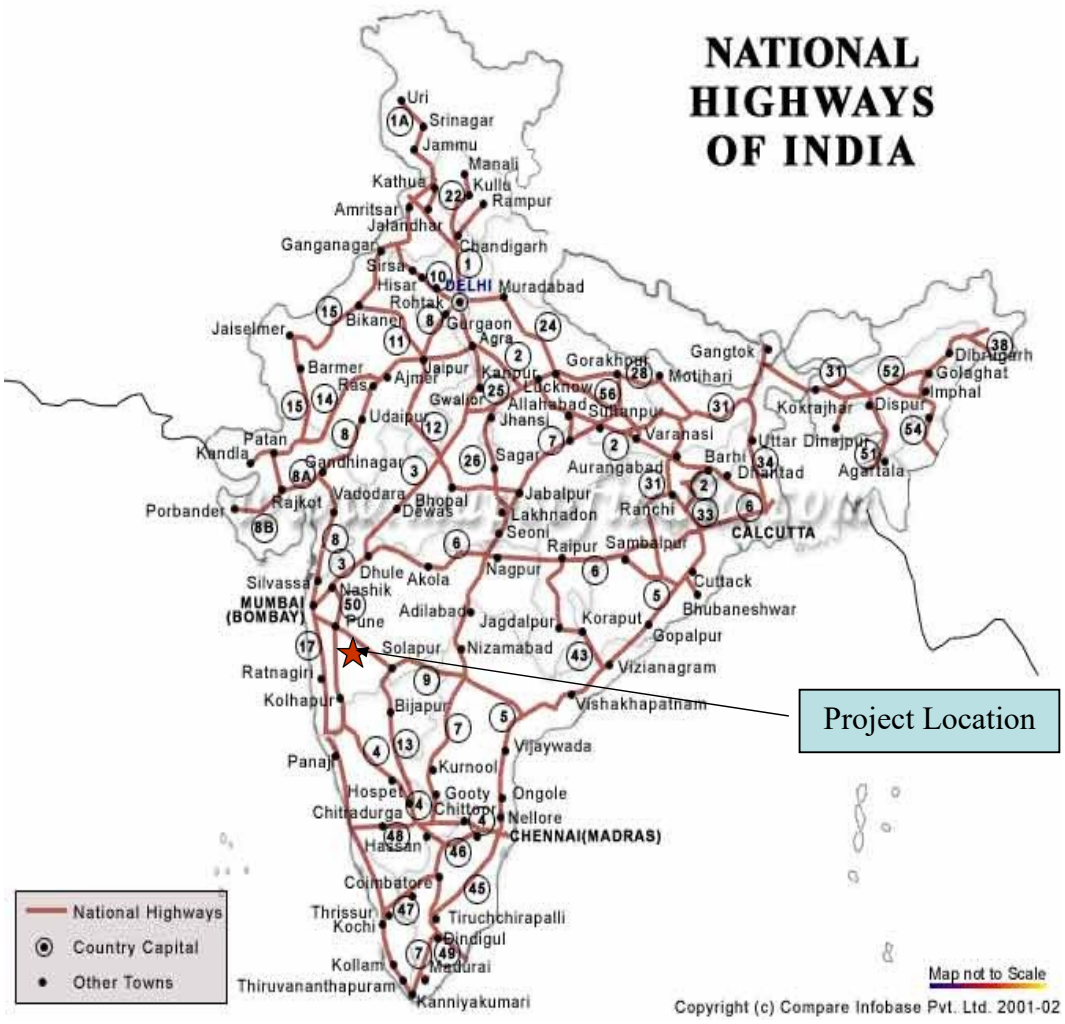


Chapter 3: Project Appreciation

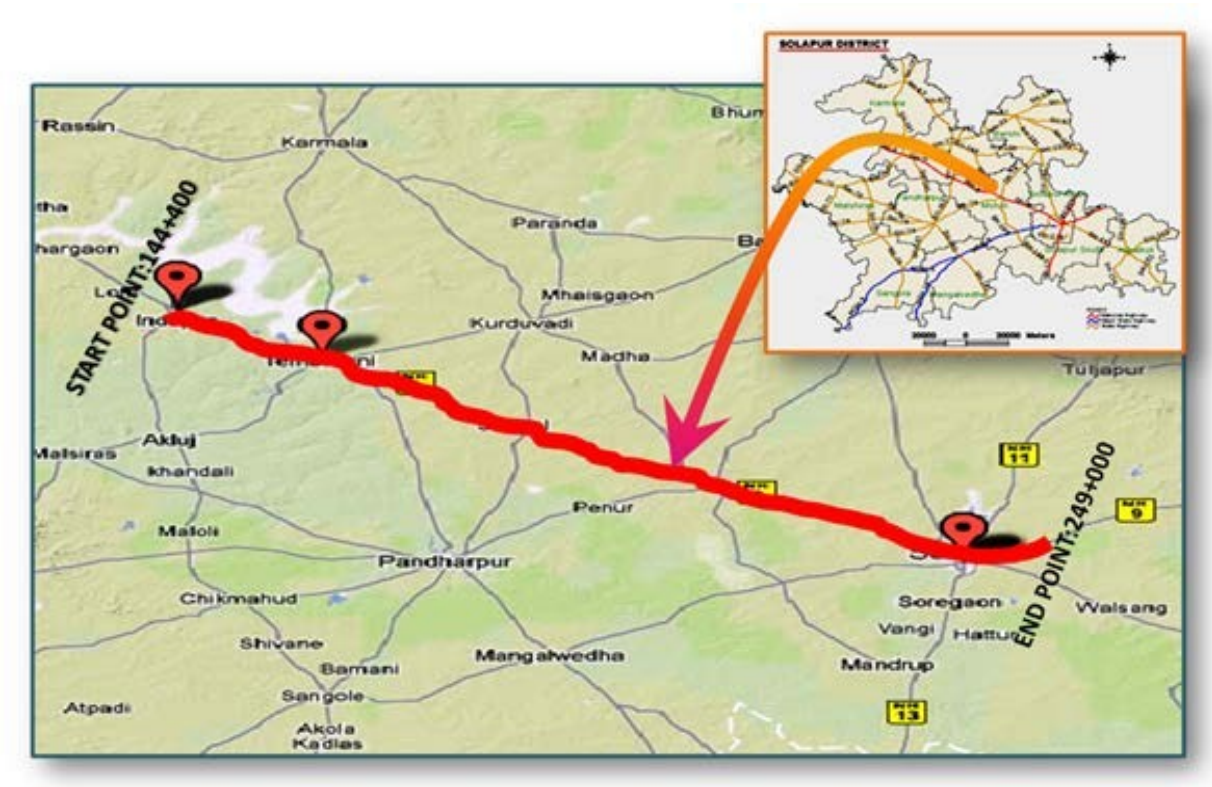
3.1 PROJECT BRIEF

Project Description:

The project is a 102.078 Km. long Project Highway section of NH-65, starts from Km. 150.050 near Bhima Nagar village on Pune side and traverses in a North-South direction and ends at 251.325 near Solapur at Solapur by pass which is an existing 4-lane divided toll road, which was chosen for implementation along with other DBFOT sections along this highway. The above section is developed as partially access controlled toll way, thus in order to provide a better motor able road with improved level of service to the vehicular traffic, it has been decided to augment the capacity of the Bhima Nagar (Km. 150.050) – Solapur (Km. 252.200) section of NH-65 in State of Maharashtra by widening the existing 2-lane to 4-lane divided carriageway facility. Concession Agreement dated 30-09-2009.



Location Map:



3.2 PROJECT DETAILS

The salient details of the contract dates of the project are mentioned here asunder.

Project	Design, Engineering, Construction, Development, Finance, Operation andMaintenance of the Existing 2-lane road and widening it to a 4-lane divided Highway of Bhima Nagar- Solapur section of NH-65 from Km.150.050 to Km. 251.325 in the State of Maharashtra on Design, Build, Finance, Operate and Transfer (DBOT) basis.
State	Maharashtra
National Highway No.	NH-09 (New NH – 65)
Section	Km. 150.050 to Km. 252.200 section on NH-65 (Bhima Nagar – Solapur)
Length of the Project	101.3 Km
Employer	National Highway Authority of India
Independent Consultant	M/s K & J Projects Pvt. Ltd.
Independent Auditor	M/s. Bansi S. Mehta & Co
Concessionaire	Pune- Sholapur Road Development Company Limited
Date of Award (LOA)	27-August-2009

Date of Concession Agreement	30th September 2009
Appointed Date	28th September 2011
Concession Period	19 years 295 days.
O&M Period (in Days)	6390
Construction Period	840 days.
Completion Date	3rd February 2016
Toll Commencement	31st August 2013

Other Features of the Project Highway:

Toll Plaza	2 Toll plazas located at: a) Varwade: TP-1 (Km 178+572) b) Swaleshwar TP-2 (Km 229+350)
Tolling System	Semi-automatic open toll collection System
O&M Contract	EMSL, ITNL and PSRDCL entered into a Novation Agreement on January 1, 2019; whereby ITNL novated all its rights and obligations as O&M Contractor for PSRDCLL; in favor of EMSL
Project Manager / O&M Contractor	Elsamex Maintenance Services Ltd (EMSL)
Toll Collection Contractor	EMSL is also entrusted the Toll Collection work on the Project Road
*O&M Fees (Year):	₹ 2,70,68,952/- (excluding tax) for the period from 1st April, 2020 up to 31st March 2021 with escalation@ 5% every year
*Toll Collection Fees (Year):	₹ 4,24,47,888/- (excluding tax) for the period from 1st April, 2020 up to 31st March 2021 with escalation@ 5% every year
DPR Consultant	Rites Ltd
Lead & Consortium Members of Banks	L&T finance

*Note: The figures are provided on the basis of the IE report on tolling and maintenance

The project has been developed as per the provisions of Schedule -B and C. The same is summarised below:

NH No. (New/ Old)	NH-65 (NH–9)	
Scheme/ Phase	O&M	
Mode of the Execution (BOT Toll/ BOT Annuity/ EPC/ HAM/ Item Rate/ Others)	DBOT (Design, Build, Finance, Operate and transfer (DBOT) basis	
No. of Lanes/ Configuration	Four Lanes (150+050 to 235+000) Six Lane (235+000 to 252+200)	
Length of the Project (in Km)	101.325 Km	
Total Project Cost (in Cr)	835 Crore (As per DPR)	
No. of Bypasses (Name of Town)	2 No's.	Tembhurni Bypass Sholapur Bypass
No. of Toll Plazas (Number and Location)	02 Nos.	Km. 178+572 Km. 229+350
No. of Major Bridges (Number and Location)	7 Bridges:	150+621 LHS 166+768 B/S 245+069 B/S 215+469 RHS 223+896 RHS 230+855 RHS 246+329 RHS
No. of VUP/LVUP (Numbers)	12 Nos.	
No. of ROB (Number and Location)	02 Nos.	Km. 187+ 929 Km 220+ 560
No. of GS (Number and Location)	01 Nos. (At Km. 215+990)	
No. of MNB (Number)	21 Nos.	
No. of Box/Slab/HPC (Number)	208 Nos.	
Carriageway Width (Six lane/Four lane)	12.50m (Six Lane) 8.75m (Four Lane)	
Design Speed	80 to 100 kmph	
Service Road	83.05 Km (both side)	
Slab / Box Culverts	142 Nos.	
Hume Pipe Culverts	66 Nos.	
Bus Bays	15 Nos.	
Bus Shelters	15 Nos.	
Rest Area	02 Nos.	Km 177+700 RHS Km 204+620 LHS
Pedestrian Underpass	12 Nos.	
Vehicular Underpass	11 Nos.	
Foot Over Bridge	04 Nos.	Km 152+400 (Not started) Km 161+822 (Functional) Km 240+400 (Functional) Km 245+750 (Functional)
Highway Lighting	In Working condition Street light poles: 900 No's High Mast: 38 No's.	
Automatic Traffic Counter cum Classifier	28	
Emergency Communications System (SOS)	101	
Variable Message Signs	-	
Closed Circuit Television Cameras	94	
Meteorological Stations	NA	

The configuration for the project to be developed is described as under:

The Road Width is developed as per the provisions of CA

Sr. No.	Description	Dimension
1	Carriageway width for Rural section	2 X 7.0 m
2	Carriageway width for Urban section	2 X 10.5 m
3	Paved Shoulders	2 X 1.50 m
4	Central Median Width	5.0 m
5	Earthen Shoulders	2 X 2 m

The pavement composition on the main carriageway and the Rehabilitation done as mentioned in the IE report is as given below:

S. No	Layer	New Carriage Way	Rehabilitation of Existing Carriageway
1	BC	50mm	50mm
2	DBM	125/130mm (in 2 layers)	Varies as per design and Profile Corrective Course (PCC)
3	WMM	250 mm (in 2 layers)	-
4	GSB	200mm	-
5	Sub grade	500Mm	-

The pavement composition on the service road and the Rehabilitation done as mentioned in the IE report is as

Sl. No	Layer	Thickness
1	BC	30 mm
2	DBM	50 mm
3	WMM	250 mm (in 2 Layers)
4	GSB	150 mm
5	Sub Grade	500mm

The pavement composition on the toll plaza as mentioned in the IE report is as

Sl. No	Layer	Thickness
1	PQC	340 mm
2	DLC	150 mm
3	GSB	200 mm

Based on VDF obtained from Traffic Survey by Traffic Expert of IE team and the AADT Furnished. In the Concessionaire's report, the revised Pavement Design recommendation would be as follows:

Vehicle Type	Km. 171	Km. 242	Adopted VDF in Design Recommendation
LCV	0.73	0.73	0.73

BUS	1.13	1.59	1.13
2 A	1.58	2.49	2.49
3 A	2.95	2.49	2.95
MAV	5.47	4.73	5.47

Section	Overall Design Traffic*	Design Traffic for Stage - 1	Design period for Stage - 1	Construction Thickness (mm)				
				First Stage			Second Stage	
				BC	WMM	GSB	BC	DBM
HS-A (Km.150.400 to214.600)	140	100	2012-2023	50	130	200	50	50
HS-B (Km.214.600 to 246.610)	94	90	2012-2026	50	125	200	50	50
HS-C (Km.246.610 to 251.325)	140	100	2012-2023	50	130	200	50	50

** For20 years MSA (2012-2032)*

Notes:

1. The tables are taken from the latest IE report made available by the client, hence the assumed figures are considered as correct.

2. The second stage construction (to extend the pavement's life up to the end of operation period of 20 years) will be taken up in the year 2024 for HS-A & HS-C and 2027for HS-B, when about 70% of the pavement life designed in first stage will be consumed

STRUCTURES/JUNCTIONS

The summarized details of Structures/Junctions developed along with the description of the structure, are as tabulated below:

S. No	Descriptions	Unit	Total	Remarks
1	Major Bridges	Nos	7	
2	Minor Bridges	Nos	21	
3	Culverts			
a	Pipe Culverts	Nos	142	

b	Box/Slab Culverts	Nos	62 + 4	4 Box Culverts are under COS
4	Underpasses			
a	Vehicular Underpass	Nos	11	
b	Pedestrian Underpass	Nos	12	
5	ROB	Nos	2	
6	Grade Separator	Nos	1	
7	At Grade Intersections	Nos	28	

Major Bridges – 7 nos. of the major bridges were proposed as New Major Bridges and Widening for Existing Major bridges-

Sr. No	Design Chainage	Type of Crossing	Proposed structural configuration	Proposed structure type	Proposed Span Details
1	150+664	Bhīma River	New 3 Lane Bridge	PSC Girder Bridge	14X30.00
2	166+768 LHS RHS	Nallah	Reconstruction with New 6 lane bridge	RCC T- Beam Bridge	6X17.50 = 105 m
3	215+465 RHS	Nallah	Rehabilitation Reconstruction	PSC Girder Bridge	3X26.40
4	223+896 RHS	Seena River	Rehabilitation and Widening		9X24.50
5	230+855	Nallah	Rehabilitation and Widening	RCC T- Beam Bridge	5X17.25
6	245+069 LHS RHS	Nallah	Reconstruction	PSC Girder Bridge	10X18.50
7	246+329 RHS	Nallah	Rehabilitation and Widening		8X13.2

Minor Bridges- 21 nos. of Minor bridges are being developed for the widening of existing 3 lane to 6 lane configurations;

S. No	Design Chainage	Type of Crossing	Proposed Works	Proposed structure	Proposed span arrangement
1	151+700	Nallah	Rehabilitation and Widening	RCC solid Slab	1X6.10
2	152+278	Canal			1X12.9+1 X13.3

3	162+197	Nallah		RCC T- beam	1X16.70
4	166+280	Nallah			1X12.80
5	172+506	Nallah			1X11.45+1X10.95+1X11.35
6	173+363	Nallah			1X17.6+1X23.01+1X16.7
7	183+654	Nallah		RCC solid Slab	1X7.40
8	185+040	Nallah		RCC T-beam	1X16.9+1X22.40
9	185+631	Nallah			1X11.40+1X16.40
10	186+978	Nallah			1X10.70+1X10.4+1X10.8
11	190+383	Nallah		RCC solid Slab	1X8.80+2 X8.60
12	190+838	Nallah		RCC T- beam	1X17.20
13	201+493	Nallah		RCC solid slab	1X7.50
14	209+241	Nallah		RCC T- beam	2X14.50
15	224+626	Nallah		RCC solid slab bridge	1X8.90+1 X9.0+1X 8.90
16	232+032	Nallah		RCC T- beam	13X 7.0
17	233+112	Canal			1 X 17.2
18	236+647	Nallah		RCC solid slab bridge	1X9.40
19	237+164	Nallah		RCC T- beam	1 X11.6+ 1X17.6
20	242+494	Canal			1X11.25
21	249+090	Nallah			1X8

Reconstruction/Widening Scheme for Pipe Culverts and Box culverts:

The following numbers of Reconstruction/Widening Scheme has been developed for the 6 lane carriageway configuration

Sr. No	Type	Nos	Remarks
1	New Construction	25	HP culverts
2	Widening	73	HP culverts

3	Reconstruction	44	HP culverts

Sr. No	Type	NO's	Remarks
1	Widening	30	Box Culverts
2	Reconstruction	32	Box Culverts

Change of scope (culverts): At 8 locations of culverts were proposed with the change of scope proposals and developed on site

S. No	Chainage (Km)	Type of Structure	Span Arrangement
1	0.310	Portal Frame	116.95 X 4.5 X 3.8
2	6.640	Portal Frame	108.47 X 3 X 3.8
3	159.000	Portal Frame	25.24 X 4.5 X 3.8
4	164.500	Portal Frame	33.24 X 3 X 3.8
5	178.681	Box (Irrigation Canal)	2 X 2.0
6	180.135	Box (Irrigation Canal)	2 X 2.0
7	223.675	Box (NTPC)	4 X 3.0
8	247.140	Box (SMC)	2 X 2.0

Vehicular Underpasses: 11 Nos of Vehicular underpasses have been developed on the project highway

S. No	Proposed Chainage	Location	Vent Size		Total Length of structure
			Proposed	Actual adopted	
1	161+383	Tembhurni - Ahmadnagar SH - 141 Crossing	1X25X5.5	1X25X5.5	26.8
2	163+595	Kurduwadi Road (Tembhurni bypass)	1X15X5.50	1X15X5.50	17.1

Pedestrian Underpasses (PUPs): 7 nos. of Pedestrian underpasses are developed and detailed as;

Sr. No	Proposed Chainage	As Built Chainage	Location	Vent Size	
				Proposed	Actual Adopted
1	152+750 183+420	184+220	From Bhimanagar Shifted to Aran	6X3.50	7.00 X 4.50 (*)
2	176+454	177.259	Varwade,-LHS Hole-RHS	6X3.50	7.00 x 4.50 (*)
3	220+382	221.187	Mohol Railway stn	6X3.50	6.00 X 3.50
4	224+373	225.178	Shirapur-LHS Lamboti - RHS	6X3.50	6.00 X 3.50
5	225+525	226.362	From 250+742 To Shifted 225+525	6X3.50	6.00 X 3.50
6	240+765	241+570	Kegaon / School	6X3.50	6.00 X 3.50
7	247+114	247+909	Karamba	6X3.50	6.00 X 3.50

(*) Modified under COS

Furthermore, 5 additional PUPs are developed in the approaches of the VUPs.

S. No.	Chainage (Km)	As Built Locations	Size	Remarks
1	244+560	245+455	4 X 2.50	
2	246+600	247+495	4 X 2.50	
3	248+975	249+631	4 X 2.50	
4	188+070	188+875	4 X 2.50	COS
5	215+700	216+535	4 X 2.50	COS

Railway Over bridge (ROB); 02 Nos of ROBs have been developed

S. No	Design Chainage	Type of Crossing	Existing Structure	Proposed Structural configuration	Proposed Structure type	Proposed span arrangement
1	187+ 929	Railway line	Level Crossing	New 6-Lane ROB	PSC girder	2X15.00+1X 26

2	220+ 560	Railway line	Existing 2 lane ROB	Widening and extension to 6- lane	PSC girder	2X12.00+1X 20

Grade Separated Intersections; One No of grade separated intersection was proposed to be developed as per the CA, however, the concessionaire had proposed to develop the same with a different span arrangement shown as and the difference was considered in the change of Scope;

S. No	Chainage	Location	Span	Remark
1	215+840 to 215+990	Mohol Town	As per CA 6X25X5.5 Proposed by Concessionaire 8X25X5.5	Change of Scope

Minor Intersections- 28 minor junctions are developed as per the provisions of the CA.

Toll Plaza; 02 Nos of toll plazas are developed and are functional

Sr. No	As per CA (Existing Km.)	Proposed Chainage	As built Chainage
1	224 + 400	229 + 230	230+155
2	173 + 500	178 + 572	179+377

Truck Lay Bays- 03 Nos truck lay bay has been developed on the project road section

Sr. No	As per CA (Existing Km.)	Proposed Chainage	As Built Chainage
1	145 + 200 (LHS)	151 + 800 (LHS)	152+103.52 (LHS)
2	233 + 000 (LHS)	233 + 000 (LHS)	233+525 (LHS)
3	245 + 300 (RHS)	233 + 300 (RHS)	234+255 (RHS)

Service roads – 83.05 km of the service road was to be developed but the final completed length of the service road as per the IE is 79.05 km.

3.3 OPERATION AND MAINTENANCE – KEY PROVISIONS

Preserving and keeping each type of roadway, roadside, structures as nearly as possible in its original condition as constructed or as subsequently improved and the operation of highway facilities and services to provide satisfactory and safe transportation, is called Road Maintenance or maintenance of highways

Highway maintenance is closely related to the quality of construction of original road. Insufficient pavement or base thickness or improper construction of these elements soon results in expensive patching or surface repair. Shoulder care becomes a serious problem where narrow lanes force heavy vehicle to travel with one set of wheels off the pavement.

Improperly designed drainage facilities, mean erosion or deposition of material and costly cleaning operation or other corrective measures. For regular highways maintenance and repair sharp ditches and steep slopes require manual maintenance as compare to cheap repair of flatter ditch and soil by machine.

Roadside and Highway Drainage maintenance

Depends on the characters of road side where the roadside is grassy it must be mowed; cutting, ploughing or spraying with weed killer must be done.

Drainage of Highways: Keeping ditch, culvert and other drainage structure, clean and ready to carry next flow water. Sediments deposited during period of heavy flow must be removed badly eroded channel and dikes properly protected to prevent recurrence.

Shoulders Maintenance:

The maintenance of shoulders depends on the surface character of the area where the maintenance and repair are performed. SOD shoulders (Sod shoulders are earth shoulders on which a solid turf has been established. Normally they require very little maintenance and holes, ruts, and settlements should be repaired with sod or stabilized material.) must be moved and occasionally bladed down to the level of the roadway so that water is not trapped in the travelled way. Grass must be kept in good condition. In maintenance of roads shoulders protected by bituminous blankets have surface treatments same as for roadway surface

Bridge maintenance:

Bridges maintenance is a major part of roads maintenance. Bridges can be maintained in good condition by following the below guidelines:

- Exposed steel work must be cleaned by sand blasting flame or other means followed by repainting.
- Deck joint may extrude or become filled with dirt so that cleaning and resealing is necessary.
- Out of control vehicle, causing damage to guard rail, must be repaired and strengthened.
- If bridge deck become rough resurfacing is required
- Remedial measures to correct serious scour around and under piers and abutments.

As per the scope, under the operation and maintenance, the O&M works are categorised into 2 heads

- Major Maintenance works and Routine Maintenance works

Summarised, the O&M Obligations of the Concessionaire (Clause 17.1)

- Permitting safe, smooth and uninterrupted flow of traffic on the Project Road
- Minimizing the disruption to traffic in the event of accidents
- Undertaking routine maintenance including prompt repairs of pot holes, cracks, joints, drains, embankments, structures, pavement markings, lighting, road signs and other traffic control devices

- Undertaking major maintenance such as resurfacing of pavements, repairs and refurbishments of tolling system and other equipment
- Preventing any unauthorized use of the Project Road.
- Protection of environment and provision of equipment and materials
- Complying with safety Requirements in accordance with the provisions of the CA.

As per the documents available, Supervision Consultancy for Maintenance works at PSRDC is being awarded to Elsamex Maintenance Services Ltd.(EMSL), and the broad scope is

- Review quality of aggregates, binder, JMF (Job Mix Formula) & suggest changes, if required. Site visit for source approval & quality verification, if required.
- Review of laboratory setup of Contractor, ensure that equipment in the laboratory is complete &is sufficient for all tests required for carrying out the awarded work
- Review the methodology and work plan submitted by the Contractor, and ensure that plants, equipment and machinery mobilised by the Contractor is sufficient to undertake the work as per the work plan
- Review and ensure the Traffic Diversion/Traffic Management Plan, BOQ provisions & specifications with respect to actual site conditions & suggest modifications, if required
- Monitor sample collection of materials, mix and overlay. Ensure that materials to be used in overlay conform to IRC, MoRTH and CA Specifications
- Supervise lab tests. Report all test results weekly and inform the Client about failed tests which are required for the execution of the project, if any, within 24 hours from the completion of such tests
- Ensure that the temperature of the mix at the plant and at Project site is as per specifications
- Ensure that contractor effects and implements a system for the quality assurance of the works.
- Carry out supervision of all works as per approved method statements of various items of work and ensure proper supervision as per requirement;
- Measurement of quantities and certification, recording of measurements; verify, certify and issue interim and final payment certificate of the contractor based on the conditions of the contract/approval of the Client
- Documentation related to quality records & measurements of works, and submission of DPR on daily basis

The observation as per the IE's latest report as per the maintenance requirements set forth in Schedule K of CA (The "Maintenance Requirements"), and the same being tabulated below:

S No	Nature of defect or deficiency	Time limit for repair/ rectification	As summarised in IE Report
	ROADS		
A	Carriageway and paved shoulders		
1	Breach or blockade	Temporary / restoration of traffic within 24 hours; permanent restoration within 15 days	Nil
2	Roughness value exceeding 2,500 mm in a stretch of I km (as measured by a standardised rough meter/bump integrator)	180 days	Nil
3	Pot holes	48 hours	16 locations
4	Cracking in more than 5% of road surface in a stretch of I km	30 Days	almost 1.5 km identified
5	Rutting exceeding 10 mm in more than 2% of road surface in a stretch of I km (measured with 3 m straight edge)	30 days	almost 2 km identified
6	Bleeding/skidding	7 days	almost 6 km identified
7	Ravelling/Stripping of bitumen surface exceeding 10sq m	15 days	Nil
8	Damage to pavement edges exceeding 10 cm	15 days	
9	Removal of debris	6 hours	6 locations identified
B	Hard/earth shoulders, side slopes, drains and culverts		
1	Variation by more than 2% in the prescribed slope of camber/cross fall	30 days	Nil
2	Edge drop at shoulders exceeding 40 mm	- 7 days	32.75 kim identified
3	Variation by more than 15% in the prescribed side (embankment) slopes	30 days	Nil
4	Rain cuts/gullies in slope	7 days	
5	Damage to or silting of culverts and side drains during and immediately preceding the rainy season	7 days	(i) 3-row pipe culvert of 300 mm dia. at Ch. 150+150 on Median. RHS Headwall not Constructed at Ch. 233.950 pipe culvert.
6	Desilting of drains in urban/semi-urban areas	48 hours	

S No	Nature of defect or deficiency	Time limit for repair/ rectification	As summarised in IE Report
C	Road side furniture including road signs and pavement marking		
1	Damage to shape or position;	48 hours	59 km Kerb Damaged
2	poor visibility or loss of retro-reflectivity		2.8 km kerb painting to be done 2.62 km pavement marking to be done
D	Street lighting and telecom (ATMS)		
1	Any major failure of the system	24 hours	
2	Faults and minor failures	8 hours	
E	Trees and plantation		
1	Obstruction in a minimum head-room of 5 m above carriageway or Obstruction in visibility of road signs	24 hours	Routine practice
2	Deterioration in health of trees and bushes	Timely watering and treatment	Not Regular
3	Replacement of trees and bushes	90 days	In progress
4	Removal of vegetation affecting sight line and road Structure	15 days	In progress
F	Rest Areas		
1	Cleaning of Toilets	Every 4 hours	Not cleaned
2	Defect in Electrical water and sanitary installations	24 hours	Water Not available
G	Toll Plazas		
1	Failure of toll collection equipment or lighting	8 hours	Nil
2	Damage to toll plaza	7 days	Nil
H	Other Project Facilities and Approach roads		
1	Damage or deterioration in Approach Roads, [pedestrian facilities, truck lay-bys, bus-bays, bus shelters, cattle crossings, Traffic Aid Posts, Medical Aid Posts and other works]	- 15 days	Needed attention on all Bus-Shelters and Bus- stops. Pick-up bus Stops need to be provided with litter bins.
	BRIDGES		
A	Superstructure of bridges		
1	Cracks		Nil
	Temporary measures	within 48 hours	Nil
	Permanent measures	within 45 days	Nil
	(ii) Spalling/scaling	15 days	Nil
B	Foundations of bridges		
1	Scouring and/or cavitation	15 days	Nil

S No	Nature of defect or deficiency	Time limit for repair/ rectification	As summarised in IE Report
C	Piers, abutments, return walls and wing walls of bridges		
1	Cracks and damages including settlement and tilting	30 days	Nil
D	Bearings (metallic) of bridges		
1	Deformation	15 days	Nil
E	Joints in bridges		
1	Loosening and malfunctioning of joints	15 days	Cleaning of all expansion joint needed of all major bridges.
F	Other items relating to bridges		
1	Deforming of pads in elastomeric bearings	7 days	Nil
2	Gathering of dirt in bearings and joints; or clogging of spouts, weep holes and vent holes	3 days	Nil
3	Damage or deterioration in parapets and handrails	3 days	168+200 to 168+205 Pipe Railing damage at Approach of VUP Major Bridge at Ch. 247+100 LHS Pipe Railing damaged in 60 m length
4	Rain-cuts or erosion of banks of the side slopes of approaches	15 days	Nil
5	Damage to wearing coat	15 days	Nil
6	Damage or deterioration in approach slabs, pitching, apron, toes, floor or guide bunds	30 days	Jerk at Approach: 1. Minor Bridge Ch. 233+960 RHS 2. Minor Bridge Ch. 225+400 RHS 3. PUP Ch. 189+730 RHS
7	Growth of vegetation affecting the structure or obstructing the waterway	15 days	Nil

Safety and Traffic Maintenance

The Concessionaire should have established Highway Safety Management Unit (HSMU) as per Para 6.2 of Schedule L of concession agreement. It should be functional & designate one of its officers to be in-charge of the HSMU, who should

have specialist knowledge & training in road safety by attending a course on Road Safety & Traffic Engineering by CRRI or any other reputed organization.

As observed, for the unit, the vehicles and equipment's deployed are with the requisite and designated manpower

Sweeping and Broome Machine:	01 No's
Tow Away Crane:	02 No's
Water Tanker:	05 No's
Provision for User Services: -	
Ambulances:	2 No's
Route Patrol vehicle	2 No's
Tow Away Vehicles	2 No's.

Chapter 4: Secondary Data Collected

4.0 DATA COLLECTION:

As part of the Consultants' Scope of Work, the following Data was collected and analysed:

4.1 Pavement Design Report:

The Original Pavement Design Report & the Letter of Approval from the IE for Pavement Design was collected from the Client and analysed. It was observed that the Pavement has been designed and constructed for Stage Construction where the pavement has been designed for 20 years as well as for 10 years and the final construction was undertaken for 10 Years design Traffic.

The VDF adopted based on Axle Load Survey are as under:

Vehicle Type	Km. 171	Km. 242	Adopted VDF in Design Recommendation
LCV	0.73	0.73	0.73
BUS	1.13	1.59	1.13
2 A	1.58	2.49	2.49
3 A	2.95	2.49	2.95
MAV	5.47	4.73	5.47

For the purpose of evaluation of actual traffic that has passed on the Project Highway post COD, has been evaluated based on the above VDF values.

The final Traffic used to design the pavement that has been adopted is as given below:

Section	Overall Design Traffic (MSA for 20 Yrs)	Design Traffic for Stage – 1 (MSA for 10 Years)	Design period for Stage - 1
HS-A (Km.150.400 to214.600)	140	100	2012-2023
HS-B (Km.214.600 to 246.610)	94	90	2012-2026
HS-C (Km.246.610 to 251.325)	140	100	2012-2023

From the above, it could be ascertained that the pavement in Section A & C has been designed till the Year 2023 only and the same shall be validated through FWD tests whether the pavement has reached its useful life or not.

Accordingly, the following crust thickness had been adopted during construction. Though the actual thicknesses shall be validated by undertaking Trial Pits.

Section	Pavement Layer Thickness Proposed for Construction			
	BC	DBM	WMM	GSB
HS-A (Km.150.400 to214.600)	50	130	250	200
HS-B (Km.214.600 to 246.610)	50	125	250	200
HS-C (Km.246.610 to 251.325)	50	130	250	200

The detailed Pavement Design Report & The Letter of Approval from IE are annexed in Appendix N1: Pavement Design Report & Appendix N2: IE's Letter of Approval for Pavement Design.

4.2 Actual Traffic Data: The actual Traffic Data had been collected from both the toll Plaza. Since section-wise traffic data was not available, the Traffic Data for TP2 was used for Section C as well. However, it is prudent to note that in the original traffic study, there was a major difference between the traffic in Section B (the Toll Plaza Locations falls in this section) and Section C (94 MSA in Section B vs 140 MSA in Section C). However, since Section C is only for a length of ~7 Kms, it is felt that this would not make any major impact on the overall analysis.

The Data collected provides month-wise total Traffic for different class of Vehicles, the same is summarised as under:

Traffic Data for Toll Plaza #1							
Year	Tractor	Car	LCV	Bus	Truck	MAV	OSV
2014	0	844012	269584	100718	266968	1279607	864
2015	10971	982011	282738	87124	255299	1405919	1659
2016	14823	997241	295639	82189	309106	1625798	3694
2017	6867	1662553	388561	199677	364141	1726184	7955
2018	12792	1918780	440262	252593	325876	1664362	18398
2019	8880	1899525	364738	211917	402183	1654925	4421
2020	9340	1695850	289746	116487	370656	1419052	1744
2021	13605	2255684	296034	181200	488393	1687557	2335
2022	14683	2901855	273646	230877	528878	1600898	2353

From this Data, it was evaluated that a total Traffic of 34.118 MSA has passed on the Project Highway in Section A. The Average Traffic Growth has been found to be 4.25%. However, since there were extreme variations in traffic during 2020 & 2021 due to Covid-19, It was considered that instead of adopting the average Traffic Growth, it would be prudent to calculate the CAGR Growth Rates based on Traffic in Year 2013 and year 2023 for future projections. This Rate of Traffic Growth was estimated to 3.70%.

Traffic Data for Toll Plaza #2							
Year	Tractor	Car	LCV	Bus	Truck	MAV	OSV
2014	0	1210397	262308	181723	198955	683853	351
2015	5382	1469661	306588	186563	231978	847958	334
2016	11098	1457568	290271	167793	221386	792989	931
2017	12119	2613600	399480	340027	273199	909483	3204
2018	17748	3150220	492486	412361	287085	1152355	5772
2019	15689	3222977	443578	409404	332022	1218187	2977
2020	15978	2516839	351250	206865	332673	1040714	1185
2021	18297	3454419	352301	271235	458501	1189457	1412
2022	12664	4423472	329318	370719	540666	1388254	1664

From this Data, it was evaluated that a total Traffic of 24.220 MSA & 19.376 MSA (Four Lane & Six Lane respectively) has passed on the Project Highway in Section B & Section C. The Average Traffic Growth has been found to be 10.55%. However, since there were extreme variations in traffic during 2020 & 2021 due to Covid-19, It was considered that instead of adopting the average Traffic Growth, it would be prudent to calculate the CAGR Growth Rates based on Traffic in Year 2013 and year 2023 for future projections. This Rate of Traffic Growth was estimated to 9.67%.

Here it is also noted that despite of such good growth rates in TP2, the overall traffic numbers in terms of the traffic passed through the toll Plaza is substantially low at 24.220 MSA (as against designed 90MSA, which can only be possible, if the original n]base traffic was too low. However, since such high growth Rate are unsustainable, the standard growth rate of 5% has been adopted for future projections at TP2.

Thus it can be summarised that for future traffic projections, the growth rates to be adopted for both the toll Plaza would be as given below:

Sl No	Toll Plaza/ Section	Traffic Growth Rates		
		Average Annual Growth Rate (2013-2023)	CAGR (2013-2023)	Rates Adopted for Projections
1	TP 1/ Section A	4.25%	3.75%	3.75%
2	TP 2/ Section B & C	10.55%	9.67%	5.00%

Further, it has also been noted that due to poor traffic on both the toll plaza vis-à-vis Target Traffic as specified under Clause 29 of the Concession Agreement, the Concession Period is expected to be extended by four years to 2036 from 2032. Accordingly the future traffic projections have been estimated till 2036.

4.3 Details of Past Overlay: In order to arrive at the future major maintenance (Overlay / strengthening) provisions, it was necessary to evaluate the past overlays, if any. Accordingly, the details of Past Overlays in terms of the thickness and date when the overlay has been undertaken, was collected and duly evaluated. The same has been taken into account while proposing future overlays.

4.4 Asset Register: The List of Assets provided on completion was also obtained from the client so as to identify the deficiencies, if any, so as to ascertain the cost of providing / repairing damages assets, if any (other than Routine Masintenance).

4.4 UI Values: Roughness Index is also a necessary information to arrive at the requirement of the overlay based on the roughness index of the various stretches of the project highways. Therefore, UI values was collected from the Client and have been used in arriving at immediate requirement of the Overlay / other treatments. The UI Values obtained are provided in Appendix C.

4.5 O&M Data: In order to arrive at the future O&M Costs, the following additional information was collected from the Client:

- SPV Costs, if any
- IE Fee
- Insurance Costs
- Energy Costs
- Maintenance Contract with Elsamax

These details has been subsequently used to project future O&M Costs for the Project Highway.

Chapter 5: Primary Investigations

As part of the Consultants' Scope of Work following Primary Investigations were carried out:

- Pavement Condition Survey of MCW & Service Road
- Condition Survey of Bridges / VUPs / Culverts
- FWD Tests
- Asset Inventory
- Trial Pits

The details of Visits and Investigations carried out are discussed briefly below:

5.1 Pavement Condition Survey of MCW & Service Road

Detailed Pavement Condition Survey was conducted by the Team of LSI and it was observed that most of the Pavement on Main Carriageway is in reasonably Good Condition with the exception of some stretches where rutting & minor cracking was observed. The details of the Pavement Condition Survey are provided in Appendix E: Graphical Representation of Pavement Condition Assessment, Appendix F: Representative Pictures of the Project Highway Main Carriageway and Appendix G: Representative Photographs of Service Road. The Pavement condition can overall be summarised as under:

	Inner	Middle	Outer	Inner	Middle	Outer
Good	70.24%	98.26%	70.24%	51.60%	97.09%	51.60%
Fair	29.76%	1.74%	29.76%	48.40%	2.91%	48.40%
Poor	0.00%	0.00%	0.00%	0.00%	0.00%	0.00%
Total	100.00%	100.00%	100.00%	100.00%	100.00%	100.00%

While undertaking the Condition Survey of the Service Road it was observed that a substantial Length ~25 Kms on RHS is obstructed due to ongoing Pipe Line laying being taken up by L&T. It is understood that the restoration of the same shall be undertaken by L&T post completion of pipeline. Consequently, these stretches has not been included in the Current Analysis for Overlay. However, for future overlays, entire length has been considered.

The visual condition of the Pavement on Service Road can be seen from the photographs provided in Appendix G.

5.2 Condition Survey of Bridges / VUPs / Flyovers / Culverts

As part of Field Investigations, condition of all the structures viz Major & Minor Bridges, Flyovers, VUPs, ROBs, Culverts, etc. was undertaken and most of the structures are found to be in satisfactory condition requiring no major repairs except for the routine maintenance activities such as Cleaning, Painting, etc.

Cost of such activities has been considered under Routine Maintenance and No major Maintenance activity was deemed necessary for inclusion.

The representative photographs along with observations of various structures are given in Appendices I, J, K, L & M.

5.3 FWD Tests:

Detailed Pavement Investigations were carried out using Falling Weight Deflectometer (FWD) and thereafter, the Data was analysed using IITPAVE software to arrive at the residual life of the existing Pavement.

The FWD results were found to be consistent with the expectations of the Pavement Design Report and the residual Life of the Pavement was found to be lacking substantially at many locations. However, since the actual traffic was deficient vis-à-vis expected traffic, the pavement was continuing to behave satisfactorily till date, except for certain stretches where rutting was also observed which evidently is on account of construction issues (Since Material Testing was not within the scope of this assignment, the specific nature of the issue could not be ascertained) and not on account of design deficiency.

From the analysis it became evident that at least two overlays would be required in almost entire stretch till 2036 and in some stretches, there may be a requirement of three overlays including strengthening by 50mm DBM.

The summary of FWD Results and Residual Life estimates are given below:

Sl. No.	Homogenous Sections, km		Remaining Life 80% reliability, MSA			Required MSA	Check
	From	To	Fatigue	Rutting	Final		
Existing Remaining Life							
LHS							
1	150+100	157+600	34.56	1512.82	11.12	75.488	Not safe
2	157+600	165+350	19.69	851.07	6.33	75.488	Not safe
3	165+350	183+100	22.60	947.33	7.27	75.488	Not safe
4	183+100	197+500	10.71	483.14	3.45	75.488	Not safe

The Detailed FWD Report is enclosed at Appendix B1 in PDF Format while the Raw Data and Analysis in Excel format is enclosed at Appendix B2.

5.4 Asset Inventory:

A detailed Asset Inventory assessment was undertaken and it was found that generally the Assets, especially the signages, Lighting, etc. are in reasonably good condition and maintenance, if any, can be taken care as part of routine maintenance maintenance. As such there was no requirement deemed necessary for inclusion as part of major ma9ntenance. The detailed List of Signages along with their condition is provided in Appendix H. Here it is significant to note that the current quantity of signages were found to be higher than the original list of signages provided by the client. It could be possible that due to certain site conditions, the additional signages were provided while the asset register was not updated suitably.

5.5 Trial Pits:

In order to ascertain the pavement composition actually provided and additional overlay layers provided subsequently, if any, number of trial pits were undertaken. From the trial Pits it was found that the thickness of Granular layers (GSB+WMM) was consistently

~450mm which is consistent with the Design. However, variance was found in the thickness of the Bituminous Layers which were varying from 165 mm to 190mm. The higher thickness could be on account of additional Overlay undertaken. As such as per reports the thickness of Bituminous Layers (DBM + BC) should ideally have been 225mm / 230mm (125/130 mm DBM +50 BC + 40 BC Overlay). Considering the regular wear & tear, erosion of 5-10mm of wearing surface is reasonable. It is understood that overlay has been undertaken after carrying out milling of the existing surface which had developed rutting. Consequently the thickness of the Bituminous Layers is consistent with the design.

The details of Trial Pits result are annexed at Appendix O.

Chapter 6: Pavement Analysis

The Pavement Analysis has been carried out based on four criteria:

- Roughness Index – Based on UI Values provided by the Client
- Visual Condition Survey
- Age of Last Overlay undertaken
- FWD Tests Results

6.1 Roughness Index:

Roughness Index analysis was carried out to ascertain whether any part of the highway has roughness Index beyond the acceptable limit of 2,500 as specified in the Concession Agreement. As such it was found that at no place the UI Value is beyond the specified limit of 2,500. The maximum value of UI was found to be 2162 for a length of 1.00 km on LHS between Km 175.000 to Km 176.000. As can be seen from the table below that a total of 7.20 Lane km out of total 443.20 Lane Km (1.6%) was found to have an unevenness Index above 2000 that also was high by only 8% above 2000.

UI	LHS			RHS		
	Outer	Middle	Inner	Inner	Middle	Outer
<2000	102.20	17.20	101.20	100.00	17.20	98.20
>2000	-	-	1.00	2.20	-	4.00
>2500	-	-	-	-	-	-

Accordingly, it was evident that at no location there is a requirement of Overlay on account of Roughness / Ride quality.

6.2 Visual Condition Survey:

6.2.1 Main Carriageway:

As mentioned earlier, approximately 36% of the Pavement was found to be under Fair Category and no portion was found as Poor. However, in certain stretches that has been classified as Fair, some rutting & Minor Cracking was observed. For the portion where rutting was observed, It would be prudent to undertake milling for levelling of the rut and provide 50mm thick DBM as a preventing maintenance.

A total of 9.1 km Length has been identified for DBM to rectify the DBM. Out of this 8.30km is required on Right Carriageway while 0.90 Km is required on Left Carriageway.

6.2.2 Service Road:

Based on the visual condition assessment it has been estimated that nearly entire length except for the length where pipeline works are in progress overlay shall be required. In few stretches repair with DBM is also proposed.

Out of total 83.050km Service Road, 58.346 Km Service Road length is available where the Pipeline work is not going on. Accordingly BC is proposed in 58.346 Kms. As mentioned earlier, in 3.322 Km length, there is a need to undertake DBM works as the pavement has deteriorated considerably. The details of the Service Road is as under:

Sl No	Description	Length (Km)
1	Total Service Road	83.050
2	Pipeline Work in Progress	24.704
3	Balance Service Road	58.346
4	DBM Required	3.322
5	BC Required	58.346

The detailed stretch-wise Analysis of the Service Road is provided in Appendix P3

6.3 Age of Last Overlay:

It was informed by the Client that nearly entire stretch has been provided with 40mm BC overlay between 2019 to 2022. The details of Overlay undertaken are as summarised below:

Year	LHS	RHS	Total	%
2019	19.90	21.30	41.20	21.25%
2020	2.20	2.40	4.60	2.37%
2021	27.70	31.20	58.90	30.38%
2022	51.20	38.00	89.20	46.00%
Total	101.00	92.90	193.90	

From the above it is evident that in only 41.20 km (21.25%) the age of last overlay is four years and it may require overlay only in 2024 and beyond. While the majority of the stretch (>75%) has been provided with the overlay in the last two years only. Under these circumstances, based on the results of FWD Tests, the Future Overlay / Strengthening would be considered.

6.4 FWD Tests:

As mentioned earlier, that the Residual life of the pavement has been found deficient for the 20 year design requirements. However, since the actual traffic has been found well below the projected traffic, the required Traffic for the balance concession period can be ascertained in two ways:

a) By calculating the Actual Traffic that has passed on the Project Highway till date and then subtracting the same from the Overall Design Traffic for the 20 Year design Life as estimated in the Pavement Design Report.

b) By Further Projecting the Existing Traffic to the end of Concession Period.

Accordingly both the scenario has been evaluated and suitable option would therefore be chosen for designing the overlay / strengthening provisions. These are summarised as under:

Traffic Estimation Summary			
Description	Section A	Section B	Section C
	TP1	TP2	TP2
Design Life	140.00 MSA	94.00 MSA	140.00 MSA
Traffic passed till Date	34.12 MSA	24.22 MSA	19.38 MSA
Balance Required Traffic	105.88 MSA	69.78 MSA	120.62 MSA
Traffic Projected Till 2036	75.49 MSA	76.36 MSA	61.09 MSA

In view of the above, it was finally considered to adopt the following values of Residual Design Life (MSA) for designing Overlay for the pavement so as to ensure that the pavement continues to act in a structurally strong manner till the end of Concession Period.

Section A	Section B	Section C
75.488 MSA	76.355 MSA	61.085 MSA

Here it is significant to note that the Section C in the present scenario is extended to the entire six lane section, i.e. from Km 235+000 to Km 252+200.

Based on the above requirements, the following Overlay/ Strengthening Provisions has been estimated:

Overlay-VG-30; Without Milling							
LHS							
Sl. No.	Homogenous Sections, km		Existing Residual Life	Required Life	Proposed (mm)		
	From	To			Total Overlay	BC	DBM
1	150+100	157+600	11.119	75.488	90	40	50
2	157+600	165+350	6.335	75.488	110	40	70
3	165+350	183+100	7.270	75.488	105	40	65
4	183+100	197+500	3.446	75.488	130	40	90
5	197+500	214+600	4.834	75.488	120	40	80
6	214+600	217+000	2.393	76.355	130	40	90
7	217+000	229+500	7.114	76.355	120	40	80
8	229+500	235+600	7.357	61.085	100	40	60
9	235+600	244+250	12.079	61.085	100	40	60
10	244+250	246+610	4.572	61.085	115	40	75
11	246+610	252+000	5.372	61.085	115	40	75

Overlay-VG-30; Without Milling							
RHS							
Sl. No.	Homogenous Sections, km		Existing Residual Life	Design MSA		Proposed (mm)	
	From	To			Total Overlay	BC	DBM
1	150+000	157+400	6.307	75.488	110	40	70
2	157+400	177+750	3.350	75.488	130	40	90
3	177+750	189+850	3.962	75.488	125	40	85
4	189+850	208+840	1.685	75.488	140	40	100
5	208+840	214+600	2.295	75.488	140	40	100
6	214+600	220+500	1.881	76.355	140	40	100
7	220+500	227+500	4.600	76.355	130	40	90
8	227+500	231+210	5.075	76.355	130	40	90
9	231+210	246+750	5.593	61.085	120	40	80
10	246+750	252+000	5.441	61.085	110	40	70

From the above, it is evident that it would take from 90mm to 140mm overlay to provide the suitable thickness that shall last for the entire duration of the Concession Period. However, it is also evident that due to various reasons, such as Roughness Index going beyond 2500, or some other distress during the course of the Concession it would require at least one more, if not two overlays, in such a case it does not make sense to undertake the entire strengthening overlay at this stage and then again undertake wearing course renewal 5-6 years later. It is also expected that just before the handover, NHAI would insist on an overlay as part of divestment requirement in accordance with the Concession Agreement.

In view of the above, a suitable Major Maintenance Strategy needs to be formulated. The same shall be discussed in the next Chapter.

Chapter 7: Major Maintenance Strategy

There are three Major Maintenance Strategies that have been considered. These are:

Option #1: In this strategy, the DBM & BC are executed in the year 2024-25 only as per the overlay design based on FWD Test Results and subsequent Overlay to meet the requirement of the Projected Traffic Numbers as estimated earlier. The advantages & Disadvantages of this strategy is as illustrated below:

- The advantage of this strategy is that the Pavement deficiency shall be taken care and there would be no future risks involved in any manner whatso ever.
- However, the initial costs would be highest in this Option and most likely the overall costs on NPV basis shall also be the highest.
- Another downside of this strategy is that it does not provide any flexibility in terms of variance in traffic.
- In future there would certainly be requirement of additional Overlays, the cost of which would be over and above the cost of selecting this Option.

Option #2: In this strategy, the DBM has not been considered and the entire thickness required shall be provided as BC in two or three different layers undertaken in 2024, 2028 & 2031 in such a manner that the overall thickness provided compares with the requirement of the overlay design based on FWD Test Results to meet the requirement of the Projected Traffic Numbers as estimated earlier. The advantages & Disadvantages of this strategy is as illustrated below:

- The initial Costs of this option is still too high, especially in view of the fact that nearly 75% of the pavement had just been provided with the overlay in 2021 & 2022.
- In this case, there is no consideration for extension period as well as for reduced traffic in the coming years.
- This does not resolve the immediate issue of Rutting in certain stretches.

Option #3: Considering the major deficiencies in the above two strategies, it becomes imperative to adopt a strategy which takes into account all the following Parameters:

a. The Entire period of Concession including the extended period up to 2036 is taken care of and the last overlay should be taken up in the years 2034-35 & 2035-36 just before the handing over.
b. Takes into account the fact that there should be adequate spacing between two overlays, i.e. there is no overlay in FY2023-24, FY2024-25 & FY 2025-26 on the stretches where overlay has been undertaken in years 2021 & 2022.
c. Immediate requirement of dealing with stretches where rutting has been observed has also been dealt with.

d. The strengthening requirements in accordance with projected traffic and FWD Data is also taken care off so that at no point the pavement is found structurally deficient and remains compliant with the provisions of the Concession Agreement.

In view of the above, in this strategy, the following provisions have been made in this strategy and the process as defined below has been adopted:

- DBM has been considered for a small length of 9.1 km to cater for the rutting.
- The entire Overlay requirement has been divided in two or three layers e.g. 90mm Overlay has been divided in two layers of 50 mm & 40mm or alternative 120mm Overlay has been divided in three layers of 40mm each.
- For each stretch, the present condition of the pavement, FWD Data & Last overlay date has been taken into account to distribute these layers amongst various years right up to 2035-36.

The Advantages & Disadvantages of this strategy is as illustrated below:

- The initial Costs has been reduced substantially and the overall cost on NPV basis is also the least.
- There is adequate flexibility of planning the overlay based on the parameters as they unfold at that time. For example, if the actual traffic is found to be below the projected traffic, the overlay can be delayed or eliminated.
- In case of the Actual Traffic being higher than the projected, the overlay can be preponed or enhanced depending upon the requirement at that stage.

From the above it can be ascertained that Option #3 provides the best option in terms of Cost Optimization, Sustainability and quality of Service on account of following Reasons:

- **The total overlay required to meet the Overlay Design based on the FWD tests has been accounted for.**
- **The Pavement Condition based on Visual Survey is also taken into account deciding for DBM where rutting is observed.**
- **There is at least 4-5 years' time difference between one overlay to another and unlike Option #1 & Option #2, new overlay is not undertaken immediately after the last overlay.**
- **The last overlay is proposed in the years 2034-35 & 2035-36 which also takes care of the handing over requirement in 2035-36.**

The costing of all these Strategies is being discussed in the next Chapter. The detailed Analysis in Excel format is enclosed as Appendix P1, Appendix P2 & Appendix P3

Chapter 8: Costing of Major Maintenance Provisions

The Coasting of Various Options is as given below:

Option #1: The Cost of Option #1 has been estimated as 484.89 Crores as per details given below. However, since all the costs are incurred upfront the NPV@12% is 303.39 Cr.

S No	Year	Item	Unit	Quantity	Rate	Amount
1	2024-25	BC	cum	79,938	12,464	99,63,47,232
		Tack Coat Under BC	Sq M	19,99,400	24	4,79,85,600
		DBM	cum	1,59,910	11,563	1,84,90,33,549
		Tack Coat Under DBM	Sq M	19,99,400	24	4,79,85,600
		Road marking	Sq M	97,096	1,055	10,24,36,280
		Kerb Painting	Sq M	1,43,010	141	2,01,64,410
		Shoulder Filling	cum	35,927	975	3,50,28,338
2	2032-33	BC	cum	79,938	18,415	1,47,20,58,642
		Tack Coat Under BC	Sq M	19,99,400	24	7,08,96,586
		DBM	cum	-	11,563	-
		Tack Coat Under DBM	Sq M	-	24	-
		Road marking	Sq M	97,096	1,055	15,13,45,040
		Kerb Painting	Sq M	1,43,010	141	2,97,92,017
		Shoulder Filling	cum	17,963	975	2,58,76,404
						4,84,89,49,697

Option #2: The cost of this Option is estimated at 372.42 Crores as per details given below. The NPV@12% is estimated as 186.54 Crores as not only major works are reduced, the works are also pushed and staggered.

S No	Year	Item	Unit	Qty	Rate	Cost
1	2024-25	BC	cum	53,104	12,464	66,18,88,256
		Tack Coat	Sq M	12,45,425	24	2,98,90,200
		Road marking	Sq M	83,918	1,055	8,85,32,963
		Kerb Painting	Sq M	69,825	141	98,45,325
		Shoulder Filling	cum	8,082	975	78,79,950
2	2028-29	BC	cum	69,845	15,150	1,05,81,60,420
		Tack Coat	Sq M	15,64,025.00	24	3,75,36,600
		Road marking	Sq M	74,363	1,055	7,84,52,438
		Kerb Painting	Sq M	54,163	141	76,36,913
		Shoulder Filling	cum	10,325	975	1,00,67,119
3	2031-32	BC	cum	86,385	17,538	1,51,50,28,740
		Tack Coat	Sq M	40,33,700	24	9,68,08,800
		Road marking	Sq M	94,740	1,055	9,99,50,700
		Kerb Painting	Sq M	70,665	141	99,63,765
		Shoulder Filling	cum	12,870	975	1,25,48,250
						3,72,41,90,436.75

Option #3: The Cost of this Option is estimated to be Rs. 414.78 Crores but since no major works are required to be executed in this option the NPV @12% works out to be Rs. 170.68 Crores. The details of the estimate are as given below:

Year	Item Description	Unit	Quantity	Rate	Amount
2024-25	DBM	Cum	4,445	11,553	5,13,53,085
	BC	Cum	15,257	12,464	19,01,63,248

Total	**484.89**	**Total**	**372.42**	**Total**	**414.78**
NPV@12%	**303.39**	**NPV@12%**	**186.54**	**NPV@12%**	**170.68**

From the above, it can be seen that the Option #3 is not only the best option but also most cost effective and is therefore recommended. The detailed Cost Analysis of various Options is given in Appendix P1 & Appendix P2..

Further the Cost of Overlay / Major Maintenance on the Service Road has been estimated to be Rs. 24.12 Crs. as per following details:

Sl No	Item Description	Unit	Qty	Rate	Amount
1	Tack Coat	Sq-mtr	438811	24	1,05,31,464
2	DBM - 50mm	Cum	1462.7	11563	1,69,13,200
3	BC - 40mm	Cum	16626.28	12464	20,72,29,954
4	Road Marking	Sq-mtr	3267.55	1055	34,47,265
5	Kerb Painting	Sq-mtr	20921.1	141	29,49,875
6	Shoulder Filling	Cum	169.12	975	1,64,892
				Total Amount=	24,12,36,650

It is proposed that half of this work amounting to Rs. 12.06 Crs is undertaken in FY 2023-24 while remaining half is undertaken in the first half of FY 2024-25. In future, at least one more overlay shall be required on the Service Road. It is propsoed that next overlay shall be undertaken in FY 2034 -35 & 2035-36 and the cost of the same shall be Rs. 43.73 Crs on 2034-35 rates. The NPV of total Major Maintenance on Service Road shall be Rs. 31.01 Crs as per following Details:

Year	FY24	FY25	FY26	FY27	FY28	FY29	FY30	FY31	FY32	FY33	FY34	FY35	FY36	Total	NPV @ 12%
Cost	12.06	12.06	-	-	-	-	-	-	-	-	-	21.87	21.87	67.85	31.01

The Details of Cost Estimate has been provided in Appendix P3.

Chapter 9: O&M Costing

O&M Costing for a DBFOT Project encompasses all costs comprising of following heads:

1. SPV Costs – which include SPV Manpower, Establishment such as Office, and other running expenses like Vehicle, Travel, Energy Costs etc.
2. IE Costs – The 50% of IE Fee that the Concessionaire is required to pay as part of Concession Agreement Provisions
3. Insurance & Other Statuary Expenses, if any.
4. Tolling Operation Costs that include Manpower, System Maintenance, Energy, Toll Plaza running Costs including incidental costs.
5. Maintenance Establishment Costs such as Maintenance supervision Staff and their establishment costs like Transportation, Office & Office running expenses.
6. Route Operations Costs which include Operating & Maintenance Costs of Route Patrolling vehicle, Ambulance & Cranes as mandated in the Concession Agreement.
7. Routine Maintenance of the Project Highway which can further be divided in the following sub categories:
    a. Cleaning & House Keeping of the Project Highway & Other Assets.
    b. Damage Repair such as damages crash barriers, Kerbs, Deliniters, etc. which may often results out of Accidents or vandalism.
    c. Periodic Painting and other Miscellaneous Maintenance of Various Assets such as Lighting, Signages, ATMS, etc.
    d. Maintenance of Plantation (mainly Median Plantation) which includes watering, Pruning, Providing Fertilizers, Replacement of dead Plants, if any, etc.
    e. Repairs of normal wear & tear such as pothole repairs, Crack sealing, etc.
8. Last but not the least Energy Charges for Street Lighting and other installations.
9. Other Miscellaneous Expenses including incidental expenses.

Generally the method adopted for efficient O&M is to appoint an specialised agency to undertake entire O&M Activity which has two advantages:

1. The Costs gets fixed and no major future variations can be expected.
2. No major management oversight is required as the O&M Contracts thus given out have strong Service Level requirements which can be easily and remotely monitored.
3. The Chances of pilferages are also substantially reduced.
4. However, this option typically results in higher costs due to the Agency Margins and additional tax implications (GST @ 18%) but the same is generally offset by better efficiency and reduction in Management Costs.

As Part of the analysis for this report, the costs has been worked out based on the option where the work is done directly by the company. As such it is significant to note that the Company has outsourced the Comprehensive O&M to M/S Elasmax (ESML).

ASSUMPTIONS:

As mentioned earlier, most of the costs are generally derived at the basis of various assumptions which are based on past experience of dealing with similar projects in the past. However, since the method adopted by PSRDCL requires the employment of third party for undertaking all aspects of O&M, 18% GST has been considered on all costs except for IE Payments, Electrical Payments & Insurance Costs. The major assumptions, as undertaken while arriving at the Costs are as under:

Sl. No.	Description	Criteria
1	Pot hole repair with BC (For Road)	0.05% of Total Balance area of BC
2	Providing tack coat on Existing Surface	As above
3	Maintenance of Earthen Shoulders, median and side slopes, filling with select soil.	0.1 % of the length of the project
4	Maintenance of cross drainage works, flyovers, elevated structures, drains, VUP, PUP etc. including cleaning of water way etc.	300000/- Year
5	Renewal of Road Markings	20% per year
6	Replacement retro reflective signage.	Avg. 5% of total Boards/year
7	Painting and lettering	
a	5 Km Stone	Once in two year
b	KM Stone	Once in two year
c	Hectometer Stone	Once in two year
8	Plantation Median & Avenue	60000/- per year per Km
9	Metal Beam Crash Barrier	Avg. 1% of total Quantity/year
10	Painting of Kerb	Avg. 15% of total Quantity/year
11	Painting of Crash Barrier/RCC Railing/Steel Railing/ Pedestrian Guard Rails	Once in two year
12	Replacement of Cats-eyes	Avg.10% per year
13	Maintenance of Public facilities like Bus Shelter, O/M Centre etc.	Once in two year
14	Maintenance of Fitting/Fixtures i/c replacement	LS Rs 50000/- per year
15	Power Consumption at Toll Plaza	increase of 1% assumed

In addition, based on the Feedback from the client, NO SPV Costs has been considered as the entire function of the SPV Team has been assigned to the O&M Contractor.

O&M COSTING

Thus the O&M Cost thus arrived at is Rs. 17.47 Crores for FY 2023-24 as per following details:

Sl. No	Description	Cost (Rs Lacs)
1	SPV Cost	92.75
2	Tolling Costs	637.20
3	IE & Other Professional Fees	32.02
4	Insurance	106.00
5	Maintenance Establishment	101.95
6	Operating Expenses	279.29
7	Routine Maintenance	264.30
8	Power Charges & Electrical Maintenance	233.52
Sub-Total Incl. Tolling Operations)		1,747.04

However, for the purpose of this analysis, this cost has been extrapolated till the end of Concession Period i.e. 2035-36 by assuming a Price Escalation of 5% per year while in the year 2023-24, only 50% of the total yearly cost has been considered for a period between Oct 2023 to Mar 2024. For the year FY 2035-36 also 50% of the costs has been considered as the extension of the Concession Period is estimated to September 2035 only. The total O&M Costs thus arrived, till the end of Concession, has been estimated to be Rs. 285.03 Crs. The NPV of the same @ 12% Discounting Rate is estimated to be Rs. 130.33 Crores. The summary of the same is as given below:

ITNL PSRDCL PUNE SHOLAPUR HIGHWAY
TOTAL O&M COSTS INCLUDING MAJOR MAINTENANCE COSTS (Rs. Crs.)

Note: Above Costs are including GST
* 50% of the total Cost for FY2023-24 &235-36 has been considered and added in the Total & NPV

The detailed Working of the O&M Costs has been provided in Appendix Q1 & Q2.

Chapter 10: Conclusion

Based on the detailed Analysis of data collected and field investigations conducted, the following is being concluded:

10.1 Major Maintenance:

m. The Pavement has been designed for a life of 10 years only and at some stage an additional 50mm DBM would be required to strengthen the pavement to meet the Design Traffic as stipulated at the time of conducting pavement design.

n. The FWD Data also suggest that the Pavement is nearing its design life

o. In the balance 13 years of Concession, two major overlay would be required in order to ensure reasonable quality of Service.

p. As the actual traffic has been lower than the estimated traffic, resulting in the extension of concession period by 4 years, immediate requirement of strengthening is not considered except for few stretches where Rutting has occurred.

q. It would therefore be necessary to strategically provide two or three overlay in such a manner so that immediate DBM requirement is eliminated.

r. Considering the above strategy, a Major Maintenance Plan has been recommended.

s. The Cost of such Major Maintenance on Main Carriageway would be Rs. 414.78 Crores while the NPV @12% discounting Rate for the same shall be Rs. 170.68 Crs.

t. On Service Road an Overlay is required immediately which shall require 3.322km of DBM and 58.346 Kms of BC.

u. Subsequently in 2034 another overlay shall be required in the entire 83.050km length.

v. The Cost of immediate overlay and DBM shall be Rs. 24.12 Crs and the Cost of future overlay shall be 43.73 Crs. It is proposed that half of the initial Maintenance amounting to Rs. 12.06 Crs, is undertaken in the current Financial Year (FY 2023-24) and the remaining cost (Rs.12.06 Crs) is incurred in FY 2024-25.

w. Thus the total Major Maintenance Cost on Service Road shall be Rs. 67.85 Crs while the NPV of the same shall be Rs. 31.01 Crs at 12% discounting rates.

x. In addition to the Pavement, there is no Major Maintenance envisaged as the all the structures and assets are in good condition and can be taken care of as part of Routine Maintenance.

10.2 O&M Costs:

c. The O&M Costs has been estimated based on first principles and has been found comparable with the current costs being incurred by the Company.

d. The Total Cost of FY 2023-24 works out to be Rs. 15.34 Crores. However, only 50% of the costs for FY 2023-24 & FY 2035-36 has been considered for the purpose of this analysis for a period between Oct 2023 to Mar 2024 (For Fy 2023-24) & Apr 2035 to September 2035 (for FY 2035-36) respectively. Thus the Total Cost to be incurred on O&M is estimated as Rs. 285.03 Crores (NPV@12% 130.33 Crores) for the period between FY2023-24 & FY2035-36, while considering a price escalation of 5%.

10.3 Overall Costs:

The Overall Costs of the Project O&M including Major Maintenance Cost has been estimated to be Rs. 746.87 Crs which includes Major Maintenance Works on Main Carriageway as well as Service Roads along with comprehensive O&M Costs up to the end of Concession Period (2036-37) starting from 2023-24. The NPV of the same at 12% Discounting Rate is Estimated to Rs. 351.06 Crs.

The summary of Overall Maintenance Costs till 2036-37 is summarised below which includes all the major components of Operations & Maintenance including Major Maintenance (Overlay) of Main Carriageway as well as Service Road:

ITNL PSRDCL PUNE SHOLAPUR HIGHWAY

1. INTRODUCTION

As part of "Operation and Maintenance of 4/6 laning of Pune-Sholapur section of NH-65 from Km.150.000 to Km.252.000 in the state of Maharashtra under NHDP Phase III on DBFOT basis.". The **M/s LSI Engineering & Consultants Limited** is required to assess remaining life and overlay on "Existing Flexible Pavement".

In pursuance of the above, the project was evaluated using Non-Destructive Equipment – Falling Weight Deflectometer.

2. SCOPE OF WORK

The scope involves the following:

Perform the FWD test on Existing Flexible Pavement.
Estimation of Existing Remaining Life
Overlay Design

3. TEST SECTIONS

The following sections were preliminary identified for FWD Testing:

Table 3-1: FWD Test Section

Sl. No	Start Chainage (Km)	End Chainage (Km)	Side	Dates of Testing
1	150+000	252+000	Both	26-04-2023 to 04-05-2023

4. FALLING WEIGHT DEFLECTOMETER

The FWD tests have been carried out in accordance with the IRC: 115-2014"Guidelines for structural evaluation and strengthening of flexible road pavements using Falling Weight Deflectometer (FWD) technique".

4.1. General Information of Pavement Deflection Characteristics

Falling Weight Deflectometer (FWD) is an impulse-loading device in which a transient load is applied to the pavement and the deflected shape of the pavement surface is measured. The working principle of a typical FWD is illustrated in Fig.4-1.

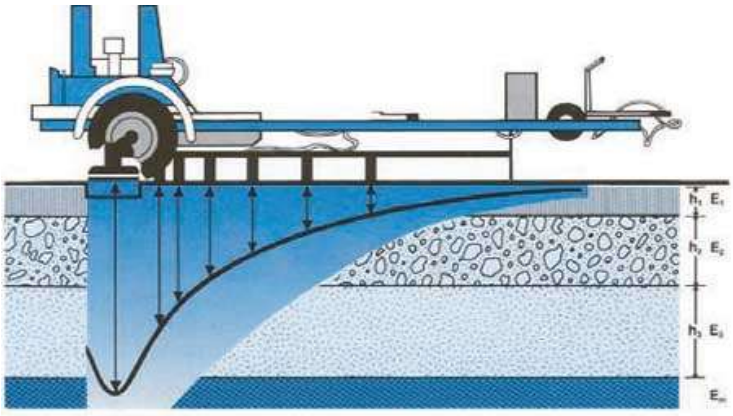

Figure 4-1: Falling weight Deflectometer

Impulse load is applied by means of a falling mass, which is allowed to drop vertically on a system of springs placed over a circular loading plate. The deflected shape of the pavement surface is measured using displacement sensors which are placed at different radial distances starting with the center of the load plate.

4.2. Principle Used

A falling mass in the range of 200 kg is dropped from a height of fall in the range of 100 to 600 mm to produce load pulses of desired peak load. The corresponding peak vertical surface deflections at different radial locations are measured and recorded. The target peak load can be decreased suitably if the peak maximum (central) deflection measured exceeds the measuring capacity of the deflection transducer.
Sufficient number of deflection transducers shall be used to adequately capture the shape of deflection bowl. Six to nine velocity transducers (geophones) are generally adequate.

Peak load of 40 kN (+/- 4 kN) and pulse duration of 20-30 ms is required for flexible pavement. The target peak load of 40 kN (+/- 4 kN) applied on bituminous pavements corresponds to the load on dual wheel set of 80 kN standard axle load and duration of 20-30 ms, which simulates traffic moving at a speed of 60 kmph. If the applied peak load differs from 40 kN within the above-mentioned range, the measured deflections have to be normalized linearly during the analysis to correspond to the standard target load of 40 kN.

4.2.1. Equipment Configuration

Make: Geotran, Roorkee, UK, India
Model: VMFWD
Month & Year of Manufacturing: Feb, 2020
Load Cell Max. Impact: 100 kN
Load Cell Accuracy: 0.1 kN
No. of Geophones to Capture Deflection Bowl: 7 No's
Geophone Arrangement Starting from Center of Loading Pad: 0, 300, 600, 900, 1200, 1500 and 1800 mm
Geophone Accuracy: 0.1 micrometer
Geophone Max. Limit: 4 millimeter
Air and Surface Temp. Sensors Max Limit: Max 70 Degree Celsius
Thermometer range used to measure pavement temp.: -50 to 250 Degree Celsius

5. PROCEDURE

5.1. Visual Pavement Condition Survey:

Pavement condition survey was assessed visually and summary of survey is given in Table 5-1. Homogenous sections were identified based on condition survey and classified into 3 categories as per clause 5.3, IRC: 115-2014 viz. good, fair and poor. As per clause 5.4, IRC: 115-2014, minimum of 4, 15 and 33 points should be taken for respective homogenous sections. But, data was collected at 16 locations for each kilometer (Minimum sample size), which is irrespective of pavement condition.

Table 5-1: Flexible Pavement Condition

Sl. No	Start Chainage (Km)	End Chainage (Km)	Visual Pavement Condition

5.2. FWD Testing:

As the pavement behavior is susceptible to temperature, seasonal variation (Moisture correction for granular and subgrade layers), etc. As a part of complete testing procedure various other information along with deflection measurements were collected namely pavement temperature, existing crust composition, CBR of subgrade soil, and other misc. information were collected during the deflection study have been recorded.

Following procedure has been followed for measurement of FWD data:
The test location is marked on the field.
The loading plate along with the deflection sensors have been lowered at the test location. At each location, 4 drops will be applied to achieve target load and corresponding pavement deflections. But readings corresponding to first drop is considered as seating drop, load and corresponding deflections values are not recorded by the equipment.

5.2.1. Temperature Measurement

The standard temperature for doing the experiment is 35ºC. Since, it is not possible to conduct the test at the standard temperature, a correction factor has to be applied for the deflection. The correction factor is determined by knowing the temperature at the time of the survey. The pavement temperature during the survey has been measured for every half hour by drilling a hole of 40 mm in the pavement and filling it with glycerol.

5.2.2. Existing Crust Composition, Thickness and Subgrade CBR.

Existing crust composition, thickness, and subgrade CBR are given below.

Table 5-2: Existing Crust Thickness and CBR (%)

Start Chainage (Km)	End Chainage (Km)	Side	BT (mm)	Granular (mm)	CBR (%)
150+000	214+600	Both	180	450	10.00
214+600	246+610	Both	175	450	10.00
246+610	252+000	Both	180	450	10.00

- Data received from site office

6. DATA, ANALYSIS AND RESULTS

6.1. Calculations and Interpretation:

- KGPBACK – Genetic Algorithm based software for back calculating the layer moduli
- Three-layer system (Bituminous, Granular & Subgrade) is adopted for back calculation
- Data required/assumptions:
    - Deflections at various radial distances (Given in **Annexure-1**.)
    - Existing layer thickness.
    - Subgrade CBR (%).
    - Layer moduli range (Refer Clause III.8.4 of IRC: 115-2014).
    - Poisson's ratio: (Refer Appendix III IRC: 115-2014)
        - For Back calculation: Existing BT-0.5, Granular-0.4, Subgrade-0.4.
        - For Overlay Design: Overlay BT-0.5, Existing BT-0.4, Granular-0.4, Subgrade-0.4

6.2. Range of Moduli

Type of Layer	Lower and Upper Limit (MPa)
Subgrade	50 to 150
Granular	150 to 400
Bituminous	400 to 1500

6.3. Correction for Temperature

The stiffness of bituminous layer is highly susceptible to temperature and hence, consequently the surface deflections of a given pavement will vary depending on the temperature of the constituent bituminous layers. If the depth of the BT surface is more than 40 mm, then correction factor has to be applied. If the depth is less i.e., if it is a thin bituminous surfacing like premix carpet and surface dressing, then no correction is required. Correction for temperature variation on deflection values measured at temperature other than $35^{o}C$ should be calculated as Clause 6.4.2 of IRC: 115-2014.

The key points to consider are:

- Pavement temperature range applicable for correction factor – $20^{0}C$ to $45^{0}C$.
- FWD shall not be carried for pavement temperature more than $45^{0}C$
- Temperature correction not required for following cases
    - Bituminous layers (depth < 40 mm)
    - Poor sections
    - Where average daily temperature is < $20^{o}C$ for more than 4 months

6.4. Correction for Seasonal Variation

Moisture content affects the strength of subgrade and granular subbase/base layers. The extent to which the strength is affected will depend on the nature of subgrade soil, gradation

and nature of fines in the granular layers, etc. For the purpose of applying these guidelines, it is intended that the pavement layer moduli values should pertain to the period when the subgrade is at its weakest condition. As per IRC: 115-2014, granular layers and subgrade will be in its weakest condition during the post-monsoon season. Survey was conducted in the months of April and May, which is the mid of summer season; Monsoon season correction corresponding to summer season is applied to subgrade and base layers.

6.5. Back-calculated Moduli

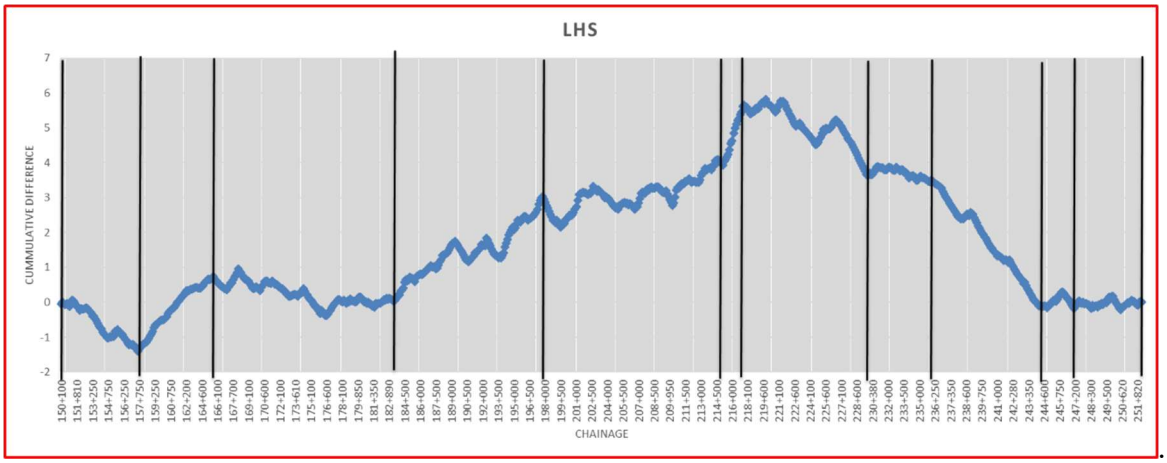
The back calculated (from KGP Back) and corrected moduli of the all the three layers are given in **Annexure-2**.

6.6. Delineation of Homogeneous Section

A statistical technique popularly used for identification of homogeneous sections is the "Cumulative Difference" approach. This approach is already being used extensively in India in many highway projects. In this approach, the sequence of actual cumulative sums in a measurement series is compared with the sums that would have resulted from adding averages. The difference between these values is termed as cumulative difference.
Surface Curvature Index (SCI) calculated as the difference between and D_0 and D_{300} where, D_0 and D_{300} are the peak deflections (mm) measured at the center of loading plate and at a radial distance of 300 mm is a bowl shape parameter, which reflects the contribution of upper layers, is the bowl shape parameter used to calculate cumulative difference.

Wherever the slope changes in the plot of cumulative difference VS distance (or number of test location), that should be considered as a possible delineator for identifying homogeneous sections. Further, few subsections were delineated based on Crust/msa. (**Refer Annexure-3: Delineation Data**)

The graph below shows plot between Cumulative Difference and test locations.



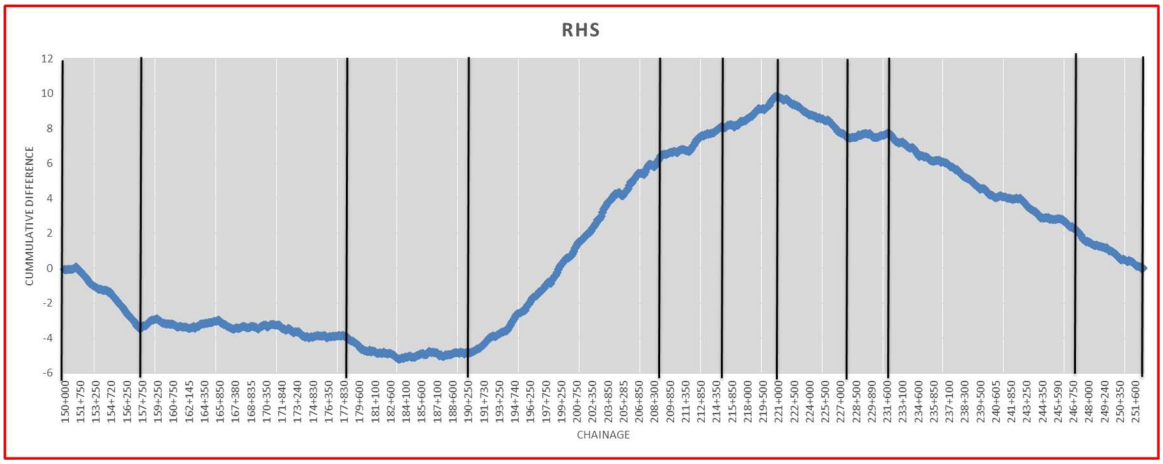


Figure 6-1: Delineation of Homogenous Sections

Upon delineation of final homogenous sections, 15th percentiles of modulus for each section was arrived and are given in Table 6-1, and is used for further analysis

* Arrived value shall be limited to 1500 MPa (Upper limit of BT Layer range) for further analysis.

6.7. Existing Remaining Life and Overlay Design:

Based on the back calculated moduli, existing remaining life in base year and overlay was estimated in accordance with IRC:37-2001 and IRC: 115-2014. The summary of results is shown in Table 6-2 and 6-3: (Various combinations were arrived taking into consideration of 80/90% reliability, grade of bitumen and with/without milling prior to overlay)

Table 6-2: Existing Remaining Life and Overlay
