Bihar	2.8%
Milak	2.5%
Meerut	2.2%
Haridwar	2.0%
Behraich	1.2%
Hardoi	1.2%
Pilibheet	1.1%

Traffic contribution of various influence zone as defined above is compiled and same is presented in table below.

Table 2-16 : Summary Influence zone at Toll Plaza -1 Km 172.000

Sr.no	Types of Zones	% of Share
1	North-West	46.9%
2	North- East	8.0%
3	Eastern Zone	8.8%
4	Local Catchment	36.3%
	Total	**100.0%**

Table 2-17 : Summary Influence zone at Toll Plaza -2 Km 228.000

Sr.no	Types of Zones	% of Share
1	North-West	37.9%
2	North-East	4.6%
3	Eastern Zone	13.1%
4	Local Catchment	44.4%
	Total	**100.0%**

The above influence zones and their contributions are marked in the map below for better understanding.

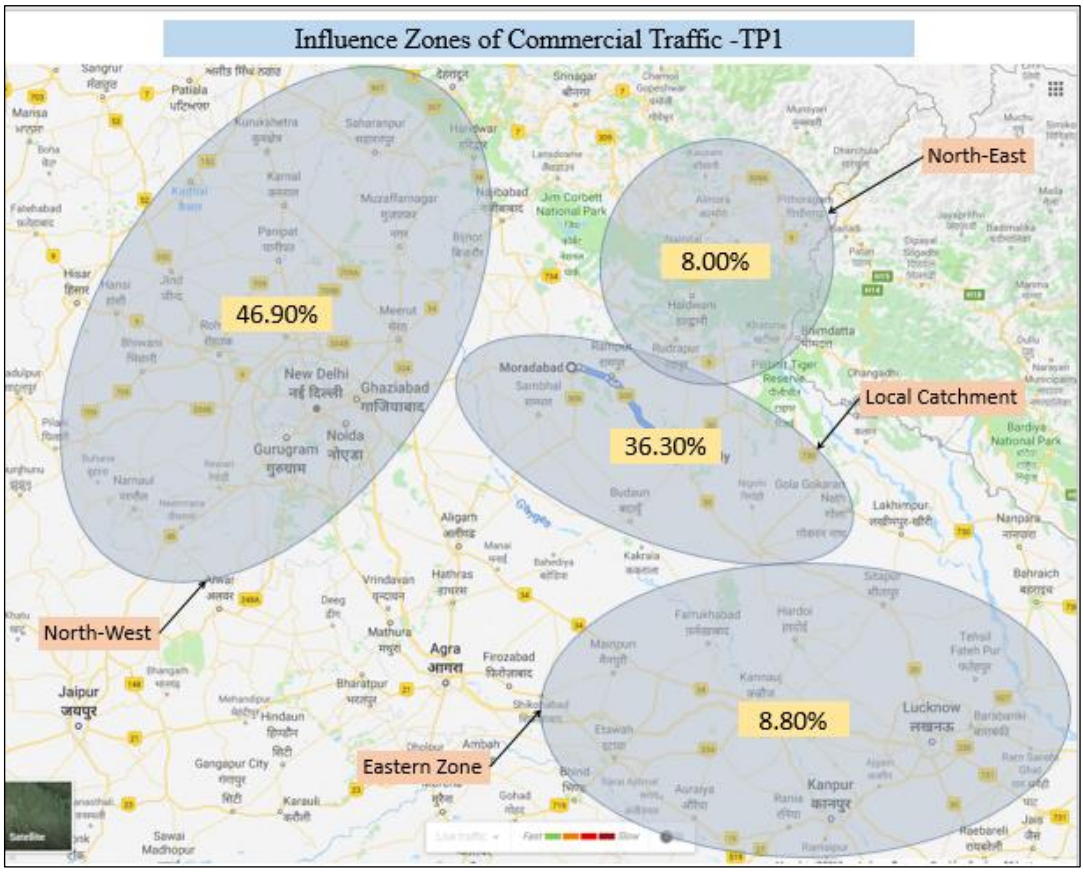

Figure 2-11 Traffic Influence Area at TP-1

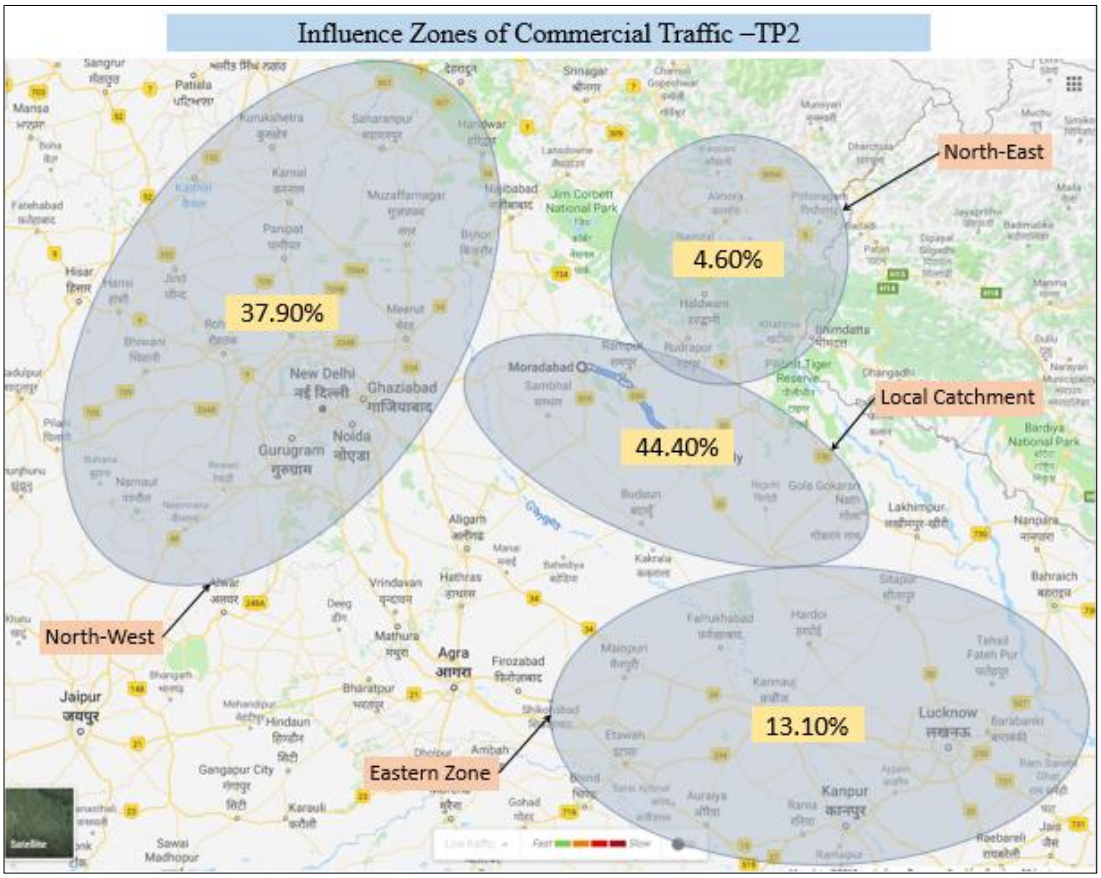

Figure 2-12 Traffic Influence Area at TP-2

It can be observed that more than 80% of traffic has the influence of North – West and Local Zone which is within boundaries of Delhi NCR and Bareilly. After that major contributions are from Uttarakhand and northeastern zone.

2.4.4.5 OD Pairs

OD pairs provide more specific information about traffic patterns on project corridors. A very high concentration of origin and destination in limited area normally is an indication of presence of major industry and plant.

Major Origin and destination pairs for goods and Passengers for both toll plazas and are given in following Tables.

Table 2-18 Major OD Pair Goods of TP-1Km 172.000

Sr.no	Origin	Destination	%
1	Rampur	Moradabad	7.28%
2	Bareilly	Moradabad	5.11%
3	Moradabad	Rampur	4.79%
4	Rampur	New Delhi	3.53%

2.4.4.6 Commodity Share

Commodity share for goods vehicle provides any indication of type of produce vehicles do carry. The following table presents distribution of commodity share in goods traffic.

Table 2-22 Commodity Share for Goods of TP-1Km 172.000.

Commodity Type	LCV	2-Axle Truck	3-Axle Truck	4-6 Axle
Empty	40.36%	37.01%	31.00%	36.65%
Vegetables/ Fruits/ Milk/ Fish	9.09%	12.17%	13.97%	13.43%
Leather	0.00%	0.35%	0.44%	0.08%
Textile Materials/Cotton	0.73%	2.16%	1.75%	1.26%
Drums/Tubes/Cables/Wire	1.82%	0.86%	1.97%	1.03%

Rubber/Wood/Tyre	3.85%	3.96%	4.77%	7.69%
Paint/Dyes	0.00%	0.00%	0.00%	0.00%
Fibre	0.00%	0.00%	0.00%	0.16%
Iron Coils	3.59%	3.85%	4.77%	5.55%
Petrol/ Diesel/Gas/LPG/Sulphur	0.77%	0.64%	1.51%	2.77%
Machines	0.00%	0.43%	0.00%	0.00%
Container	0.00%	0.00%	0.00%	0.00%
Pipe/Plastic	1.79%	1.28%	2.38%	3.49%
Chemicals & Fertilisers	1.03%	0.75%	0.13%	0.16%
Finished Consumer Goods (Electronic, Bikes, Fans etc)	2.56%	1.50%	1.88%	1.82%
Industrial Goods (Alloy/Steel)	0.26%	0.11%	0.25%	0.08%
Others	10.00%	13.37%	11.17%	13.95%
Grand Total	**100%**	**100%**	**100%**	**100%**

About 35% - 40% percent commercial traffic is recording empty trips. This indicates dominance of local zones where results in shorter trips. Most dominant commodity is food grain and vegetables / fruits which again confirms the domination of local nature of commodity transportation.

2.4.4.7 Trip frequency distributions on project stretch

Historical trip frequency data has been made available by concessionaire. Same has been relied on for finalizing trip frequencies. OD data has also been analyzed for finding trend of trip frequency. OD data is collected through random sample basis and is heavily dependent on accuracy of information provided by driver. Being a human interface it potential of inconsistency. Since reliable historical trip frequency data is available in fast tag data, the same has been used.

The following table shows trip frequency distribution arrived on the basis of fast tag data made available by concessionaire.

Table 2-24 Trip Frequency Distribution at TP1- Km 172.000

Vehicle Type	Single	Return	Overload	Monthly Pass	Local Monthly Pass	Exempt	Total
Car	39%	39%	0.0%	0.0%	14%	8%	100%
Minibus/LCV	54%	43%	0.7%	0.0%	0%	2%	100%
Bus	14%	85%	0.0%	0.0%	0%	0%	100%
Truck-2 Axle	75%	23%	0.4%	0.0%	0%	2%	100%
Multi axle (including Truck -3Axle)	89%	10%	0.2%	0.0%	0%	0%	100%
Oversized Vehicles	87%	13%	0.0%	0.0%	0%	0%	100%

Table 2-25 Trip Frequency Distribution at TP2- Km 228.000

Vehicle Type	Single	Return	Overload	Monthly Pass	Local Monthly Pass	Exempt	Total
Car	34%	40%	0%	0%	18%	8%	100%
Minibus/LCV	59%	38%	1%	1%	0%	2%	100%
Bus	18%	82%	0%	0%	0%	0%	100%
Truck-2 Axle	80%	18%	0%	0%	0%	2%	100%
Multi axle (including Truck -3Axle)	86%	13%	0%	0%	0%	0%	100%
Oversized Vehicles	79%	21%	0%	0%	0%	0%	100%

It can be seen from above that in category of car, LCV and buses there is substantial traffic taking a return trip. This confirms the dominance of local trips in travel patterns.

The above details are used for segmentation of traffic for revenue calculations.

2.5 Competing Road Network Analysis

Project road is section of NH 24 which starts from Km 1480.000 (Pakbara, at beginning of Moradabad Bypass) and ends after Bareilly Bypass at Km 262.000 (End of Bareilly Bypass) in the state of Uttar Pradesh. A detailed site visit was done to understand the potential of competing road networks. The following figure shows the project road in regional context.

Moradabad – Bareilly section of NH-24 is the most suitable link for the traffic from west Uttar Pradesh and eastern part of Delhi NCR to east UP and then further towards Bihar and north east part of country. As can be observed from the map there is no competing road on the north side of the project road. However, there are few local village roads and state highways which can form a sort of competing road network for project corridor. Competing road networks have been discussed in two categories.

1. Competing Road – A road forming alternate alignment for considerable part of project corridor and avoiding at least one toll plaza.

2. Leakage road- A short detour of small road for avoiding toll plaza.

2.1.1.1 Local Competing Roads

The following figure shows a network of local competing roads.

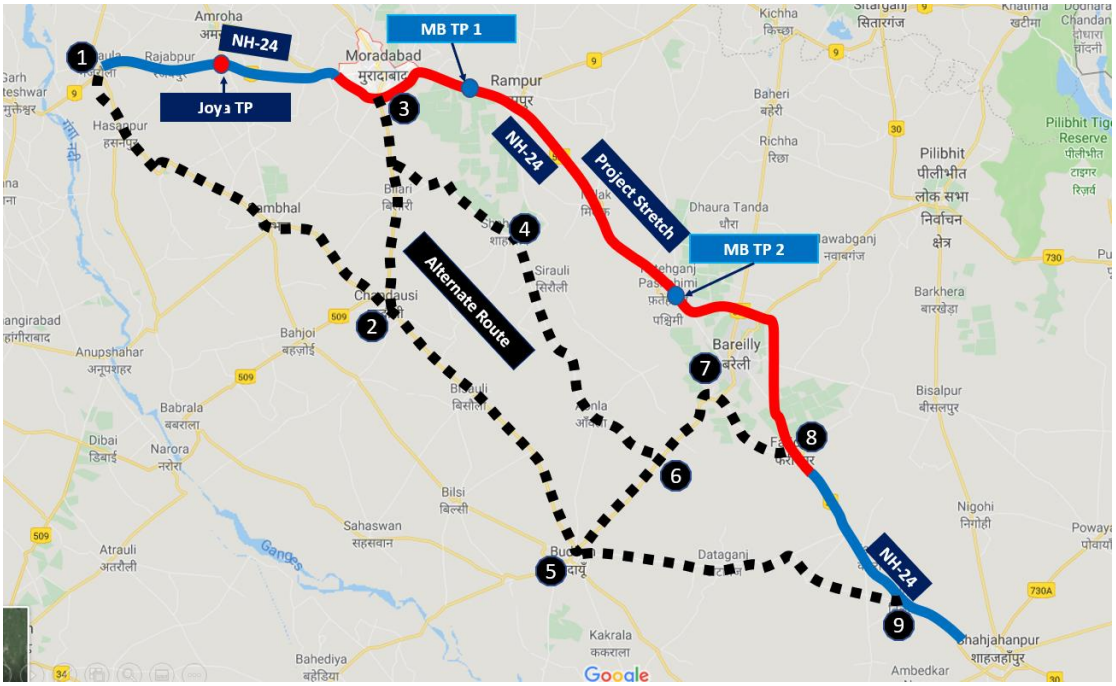

Figure 2-13Alternate routes Local Between Moradabad and Bareilly

The following three major alternate roads can thus be considered for analysis.

1. Alternate route – 1-2-5-9: This is a combination of SH-51, 69 and SH-43. The road starts from Gajraula and then joins project stretch of NH-24 at Tilhar. This becomes alternate route to project stretch and NH-24 section from Gajraula – Moradabad – Rampur- Bareilly- Tilhar.

Mostly traffic on this stretch goes to Hathras Kasganj Sikandrarao Etah which diverts from Badaun. other traffic on this stretch is local and goes to Sambhal, Chandusi, Bahjoi and Badaun.

On local inquiry with drivers and people on this stretch it was observed that traffic of Shahjahanpur to Delhi does not pass through this stretch. It is a two-lane carriageway passing through cities like Gajraula, Sambhal, Chandusi, Badaun, Dataganj. Most parts from Gajraula to Chandusi are in a very poor condition stretch is bituminous. The condition of road from Chandusi to Badaun is fair and after Badaun up to Dataganj carriageway is two lane and condition of road is good. Condition of Dataganj to Tilhar is poor and the road is of two-lane configuration.

Gajraula to Hasanpur

Hasanpur to Sambhal

Sambhal to Chandusi

Chandusi to Badaun

Figure 2-14 : Condition of Alternate Road from Gajraula to Tilhar (Shahjahanpur)

The length of this route from Gajraula to Shahjahanpur is about 235 km which is comparable to length of road via project form Gajraula to Shahjahanpur, but the time taken via alternate route is about 2.5 Hrs. more.

It was observed that this route is mostly taken by local LCV traffic which have short trips and value of commodity is not high. Other long distance commercial traffic does not take this route due to poor condition, congestion at number of locations and unsafe or no service condition on alternate route.

2. Alternate route – 3-4-6-7/9: This is combination village roads from Pakbara to Kundarki- Shahabad- Ambala. This joins Badaun Bareilly road at Bhamora. The condition of this road is poor. In most sections it is intermediate lane. This is mostly suited for local light traffic. It was observed that LCV and cars use this road for most sections. The following photographs show the condition of this road.

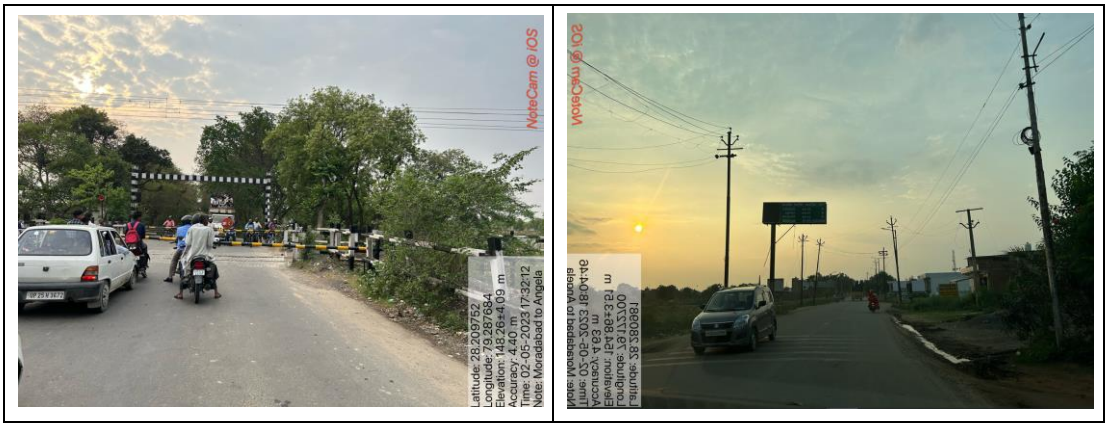

Figure 2-15 : Condition of Alternate Road from Moradabad to Bareilly

As such there is no infrastructure for traffic support and at night the road becomes deserted. There are villages on the routes through which road passes in narrow streets. Thus, commercial vehicles 2 Axle and above would not prefer this route over NH-24. However certain number of local LCV between Moradabad and Bareilly use this road to avoid toll. Length of road between Moradabad and Bareilly for both project road and alternate route is similar as 105 km approx. But due to poor condition of road, congestion on the way, absence of any traffic support infrastructure and somehow hostile conditions of rural areas, long distance commercial traffic does not use this road.

The following table summarizes comparison of length, travel time and toll on project road and alternate route.

Table 2-26 Summary of local competing road and alternate routes

Sr. No	Stretch Between	Route	Time	Distance	Lane	Condition
1	Gajraula-Shahjahanpur	Sambhal-Budaun-Tihar	6 h 39 min	234 km	Two Lane	Poor
	Gajraula-Shahjahanpur	Moradabad-Rampur Via Project Road	4 h 16 min	235 km	Four Lane	Good

Sr. No	Stretch Between	Route	Time	Distance	Lane	Condition
2	Moradabad-Bareilly	Rampur Via Project Road	1 h 46 min	104 km	Four Lane	Good
	Moradabad-Bareilly	Pakbara - shahabad-Aonla-Devchara	3 h 26 min	125 km	Two Lane	Poor

Project road has been under toll operation for last 8 years hence it is expected that the impact of these local roads, if any, must have already happened on traffic and any further impact on project traffic is not envisaged due to above local competing road.

2.5.3.1 Regional Competing Roads

Uttar Pradesh Expressways Industrial Development Authority (UPEIDA) is constructing **Ganga Expressway** which is a greenfield expressway connecting Meerut and Prayagraj. The project is awarded, and it is expected that it will be put into commercial operation in the year 2026-27.

The following Figure shows alignment of Ganga Expressway in comparison to project stretch.

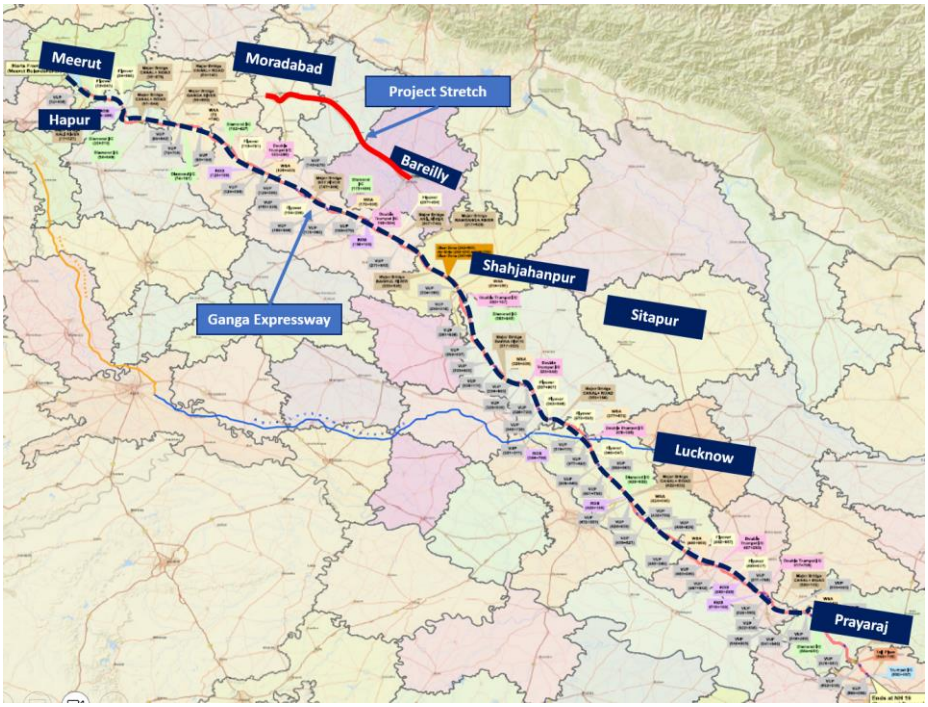

Figure 2-16 : Alignment of Ganga Expressway

It can be observed from above that Ganga Expressway can be a competing route for comercial traffic between Delhi NCR, Haryana, Punjab, Part of Uttarakhand around Haridwar on north side and Shahjahanpur, Sitapur, Lucknow, Varanasi, Prayagraj, Bihar, Bengal on east side. It has been observed in OD analysis that most of the commercial traffc on project road is local in nature however there is certain volume of traffic between these OD pairs which is potential to divert on Ganga Expressway. A cost analysis of both route is done for above pairs and same is presented in table given

below. It is noteworthy that Toll on Ganga Expressway is substantially high as compared to National Highways which is a immediate cash out component of total travel cost. Hence this diversion analysis on Vehicle Operating Cost would be slightly aggressive on diversion numbers. Folowing table shows route length and toll comparision for such pairs. It is assumed that all traffic from north would embark on Ganga Expressway from Hapur. Since only long distance vehicles would be under impact of this diversion hence analysis of 4-6 Axle vehicle is done for potential diversion. Following table shows comparison of length of various potential destinations from Hapur.

Table 2-27 Summary of Route Length of competing road

Destination from Hapur	Ganga Expressway (km)	Connector Route (km)	Total by using Competing Route (km)	Project Route (km)
Shahjahanpur	219.92	34.2	254.12	284
Sitapur	311.46	81.1	392.56	372
Hardoi	273.83	32.1	305.93	344
Lucknow	343.88	71.5	415.38	461
Banaras	566.18	130	696.18	777
Prayagraj	566.18	19.9	586.08	672

A diversion analysis for above pair is done and summary of diversion analysis is given in table below. It is expected that Ganga Expressway would be put into operation in year 2026-27, hence current divertable numbers have been excalated to relevant growth.

Table 2-28 Summary of Diversion analysis

For TP-01

Total OD Sample (4-6 Axle)	Potential Diverted Traffic (OD)	% of Diverted Traffic (OD)	Total ADT (4 - 6 axle)	No. potential vehicle diverted	% of Diversion on Competing Route	Total Divertible traffic on Competing route (Yr.22-23)	Total Divertible traffic on Competing route (Yr.26-27)
1266	47	3.71%	3102	115	95.40%	110	126

For TP-02

Total OD Sample (4-6 Axle)	Potential Diverted Traffic (OD)	% of Diverted Traffic (OD)	Total ADT (4 - 6 axle)	No. potential vehicle diverted	% of Diversion on Competing Route	Total Divertible traffic on Competing route (Yr.22-23)	Total Divertible traffic on Competing route (Yr.26-27)
1262	61	4.83%	3148	152	95.40%	145	167

Above diversion has been considered while working traffic forecast and revenue estimation for horizon years. Since impact of Ganga Expressway will be same on both the

Toll Plaza. Hence higher number of vehicles diversion (167) on Ganga Expressway has been taken.

2.5.3.2 Local Toll Plaza Leakage Road

There are few local detours around toll plazas through which light traffic can escape toll plaza. All of these pass-through the village and have very tight corners. Hence the passing of commercial vehicles is not possible through these routes. Local cars which have knowledge of these routes attempt to escape toll via these routes. These are discussed below.

There are two possible leakage roads by which one can escape toll plaza 1 at Niyamatpur.

Following map shows these leakage roads for TP-1

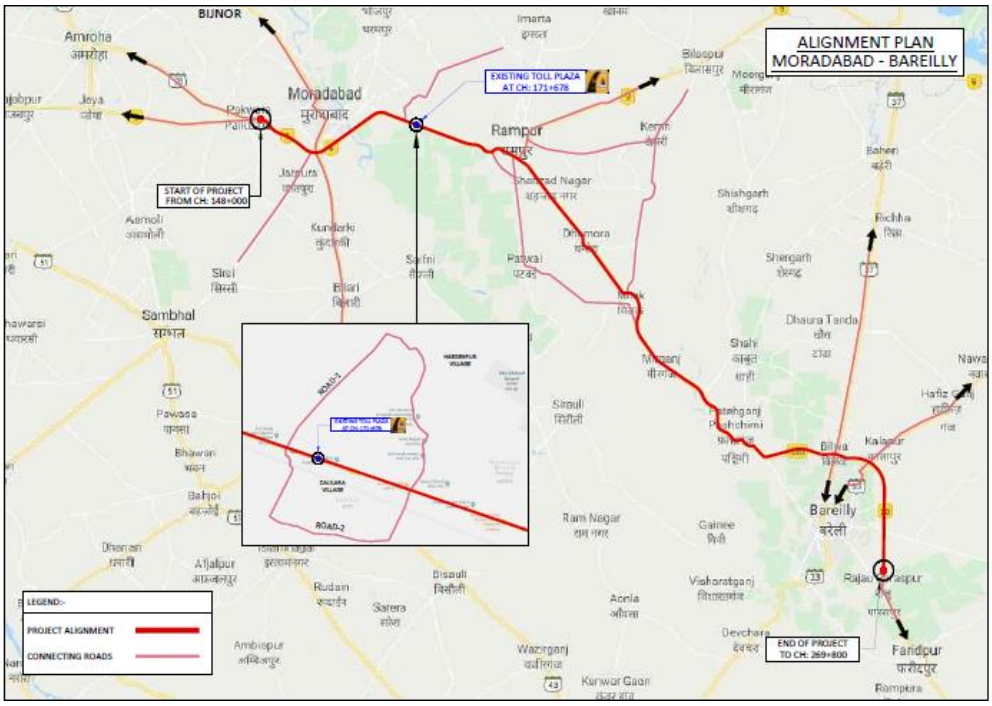

Figure 2-17 : Possible leakage roads at TP-1

The first road by which light traffic can escape Niyamatpur passes through villages. The width of carriageway is about 3.5 m. Villagers oppose passes of vehicles via these roads and only local cars which are familiar, do pass the village road. Condition of this leakage road is shown on following photographs.

Figure 2-18 : Condition of first leakage roads at TP-1

The Second leakage involves crossing of railway line through level and passes through Dalpatpur village. Only local cars and LCV used to run through this route width of road is only 3.5 m and condition of pavement is very poor. In certain parts the road is metaled only. The following photographs show the condition of this road.

Figure 2-19 : Possible second leakage roads at TP-1

Moreover, Toll operator, with the help of villagers, have posted his manpower for checking this road as escape road for non-local traffic.

Leakage roads Triya khetal toll plaza TP-2

There are three possible escape routes which can bypass toll plaza -2 at Triya Khetal.

1. Dhaneta Fatak- Shahi- Fatehganj road
2. Local village road on east side

Following figure show alignment of these roads.

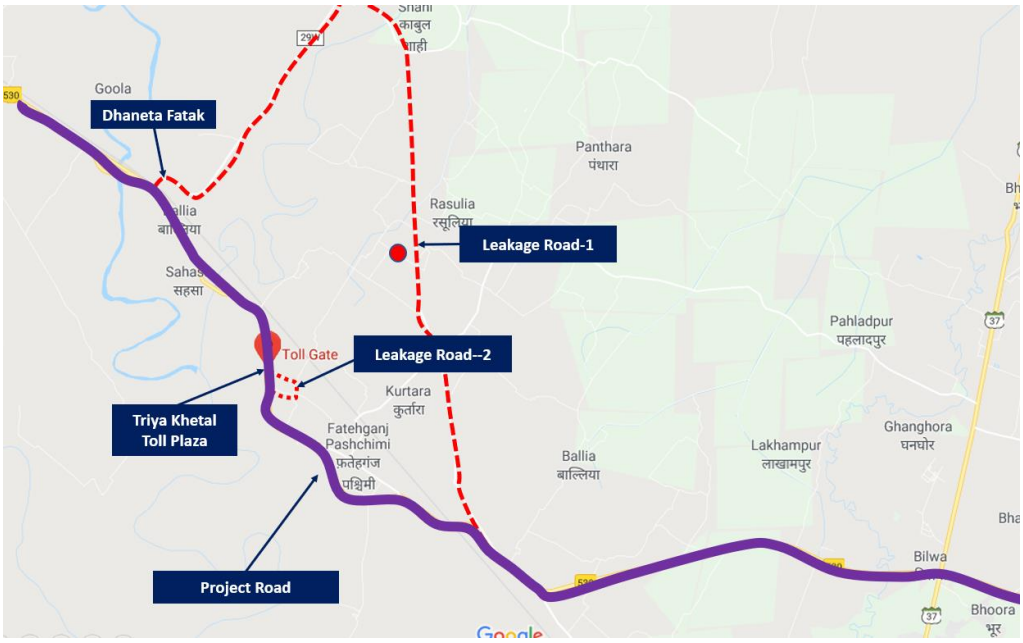

Figure 2-20 : Possible leakage roads at TP-2

1. Dhaneta Fatak- sahi road It is a two-lane road and is a bituminous road and total length of this stretch is nearly 23 km against 12.5 km length via project road. It starts with a level crossing at Dhaneta. This road passes through Shahi village. Condition of road is poor in stretches. On inquiry it was revealed that concessionaire started collecting 10-time toll from overloaded trucks then some of the trucks used this road to avoid fine. Now a days this even

overloaded trucks do not use this as concessionaire has abandoned scheme of 10 time fine. Moreover width, geometry and specification of road is not suitable for multi axle commercial vehicle. Hence the impact of this on project traffic has little potential. The following photographs show the typical condition of this road.

Figure 2-21 : Condition of Leakage Route-1 at TP-2

The second competing road of Triyakhetal toll plaza is mostly earthen and there is only 200 m bituminous road. There is only 3.5m available width of carriageway. Some part of this stretch passes through villages. This road also can be used by familiar local cars only. Commercial vehicles cannot use the road because of the poor condition of the road and tight corners through the village.

There is a stop board sign on the entrance of this road and a guard appointed by Concessionaire to stop vehicles using this road for escaping toll gate. The following photograph depicts the condition of this leakage road.

Figure 2-22 : Condition of leakage route-2 at TP-2

In light of above discussion any further diversion of project traffic on such local raods is not envisaged.

CHAPTER 3
TRAFFIC FORECAST

3.1 Introduction

Traffic growth is a result of the interplay of a number of contributory factors such as National economy, Government policy, socio-economic conditions of the people, and changes in land uses along the project corridor precincts etc. Further these factors have uncertainties associated with them. Forecasts of traffic have, therefore, to be dependent on the forecasts of factors such as population, gross domestic product (GDP), vehicle ownership, per capita income (PCI), agricultural output, fuel consumption etc. Future patterns of change in these factors can be estimated with only a limited degree of accuracy and hence the forecasting of future traffic levels cannot be precise.

The following section deals with methods, techniques, and considerations used in traffic forecast for the project under study.

3.3.1 Trend Analysis

Time series data of vehicle Registered in state of concerned states is taken from respective authorized websites and the same is used as the base data for analysis of growth.

Growth of vehicle traffic depends on the type of vehicle. Traffic growth on any highway typically depends on number of economic parameters like

- Per Capita Income
- Net State Domestic Product (NSDP)
- Population

Elasticity model of growth projection is one of the most widely acceptable methods for traffic forecast. Same is recommended in **IRC: 108-2015-Guidelines for Traffic Prediction on Rural Highways**.

The following can be pair of vehicle type and independent variable for elasticity modeling of growth.

- Car / Jeep – Par Capita Income
- Bus / Minibus – Population
- Goods Vehicle – NSDP

Same is used in analysis below.

3.3.2 Estimation of Traffic Demand Elasticity

The elasticity of traffic demand is defined as the rate at which traffic intensity varies due to change in the corresponding indicator selected. Hence, in order to estimate the elasticity of traffic demand, it is necessary to establish the relationship between the growth in number of given categories of vehicle with one of the economic variables considered, such as NSDP, per capita income and population growth.

As per **IRC: 108-2015** the model for estimating elasticity index for the project corridor is of the following form and is as given below:

Log (P) = k x Log (EI) + A

Where,

P = Number of Vehicles (Mode wise)

EI = Economic Indicator

A = Regression constant

k = Elasticity coefficient (Regression coefficient)

The elasticity for cars and bus (passenger vehicles) is calculated based on the Population and Per Capita Domestic Product (PCDP) and the elasticity for trucks is calculated based on the Net State Domestic Product (NSDP).

As observed in OD analysis, the project stretch has a share of traffic from mainly two states of Uttar Pradesh and Haryana and some traffic from Punjab, Delhi and Uttarakhand. Hence regression of dependent variable and traffic has been done for these five states. The following tables and graphs present a summary of elasticity model of growth for project corridor.

Table 3-1 : Per Capita Income Vs. Car- Uttar Pradesh

Year	PCI	Car	Log PCI	Log Car	PCI Growth	Average Growth
2011	32002	1108100	4.51	6.04		
2012	32908	1205374	4.52	6.08	3%	
2013	34044	1423020	4.53	6.15	3%	
2014	34583	1572217	4.54	6.20	2%	
2015	36973	1746117	4.57	6.24	7%	
2016	40847	2027972	4.61	6.31	10%	
2017	41832	2195783	4.62	6.34	2%	
2018	43670	2439845	4.64	6.39	4%	4.6%

Regression analysis of above is given in following figure.

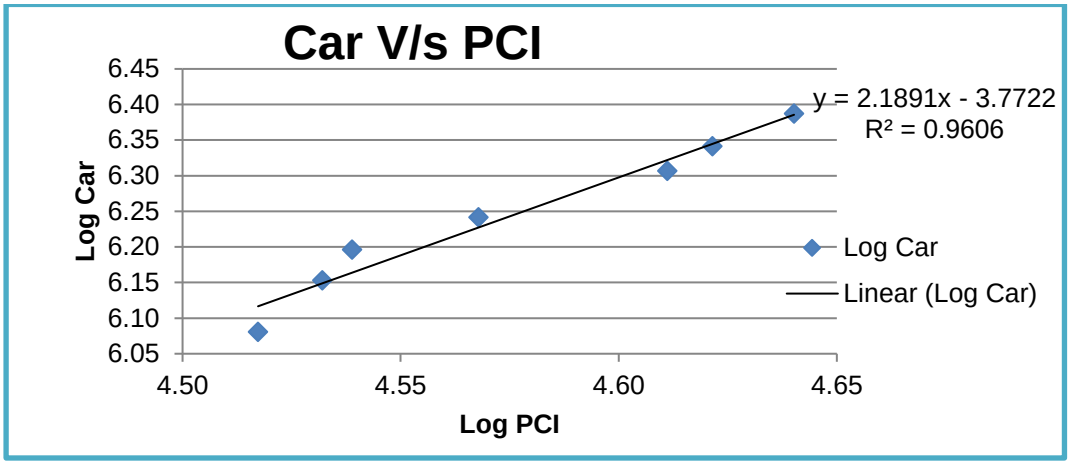

Figure 3-1 : Regression Analysis Car Vs. PCI Uttar Pradesh

Table 3-2 : Population Vs. Bus- Uttar Pradesh

Year	Population	Buses	Log Pop	Log Bus	Pop Growth	Average Growth
2011	199812000	57901	8.30	4.76

2016	15030294	30381	7.18	4.48	10%	
2017	16229143	31791	7.21	4.50	8%	
2018	17136395	32791	7.23	4.52	6%	7.7%

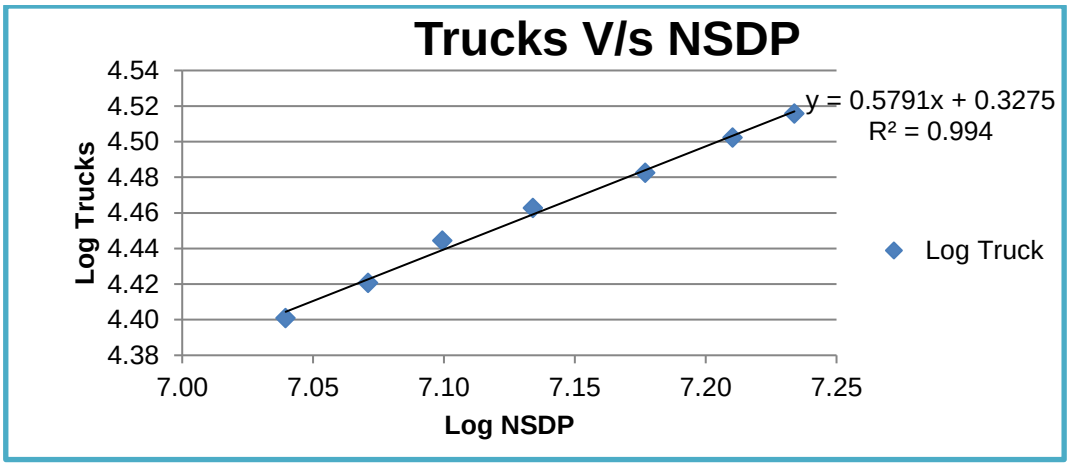

Figure 3-15 : Regression Analysis NSDP Vs. Uttarakhand

Summary of regression analysis for elasticity and growth estimation for Uttarakhand are given in following table.

Table 3-20 : Summary Regression Analysis- Uttarakhand

State	Vehicle Category	Independent Variable	Regression Equation	R Square	Elasticity Coefficient (y)	Average IV Growth (5yrs)	Growth Elastic Model	Remarks
UTTARAKHAND	Car/Jeep	PCI	y = 1.928x - -4.3333	R^2 = 0.9778	1.9	6%	12.30%	Good Regression
	Bus	Population	y = 5.6731x - -35.7365	R^2 = 0.9938	5.7	1%	7.17%	Good Regression
	Truck	NSDP	y = 0.5791x - 0.3275	R^2 = 0.994	0.6	8%	4.46%	Good Regression

Most of the traffic on the project road is from Uttar Pradesh, Haryana, Delhi, Uttarakhand and Punjab. Hence growth trends of these states only have been taken for growth projections.

Elasticity Coefficient of different states is different. The elasticity of traffic demand is moderated on the basis of experience of traffic growth in various regions and trends of logistic development. The elasticity coefficient for future years has been stepped down as same growth may not be sustainable in the longer future. Finally, the adopted Elasticity of travel demand is given in the table below. Transportation and logistics infrastructure and market in India is growing at fast pace and with stable economy and political scenario it is expected that this sector will grow at good rate in near future too.

Adopted Transport Demand Elasticity Value				
Mode	**FY- 2023-2027**	**FY- 2027-2032**	**FY- 2032-2037**	**FY- 2037-2042**
Car/Jeep	1.8	1.8	1.7	1.7
Bus	4.5	4.4	4.4	4.3
Truck	1.2	1.2	1.1	1.1

Growth of different categories of vehicles is product of elasticity and growth of independent indicators Like Per Capita Income, Growth of Population and Growth of GDP / NSDP.

Since India is emerging as stable economy and stable government is taking steps towards long term growth of industrial growth and ramping up of infrastructure, it is expected that growth will be sustainable. Hence the five-year slots have been taken for growth projections.

The following table shows the growth of independent variable taken for growth projection.

Projected Growth Rate of Independent Indicators				
Indicator	**FY-2024-2027**	**FY-2027-2030**	**FY-2030-2035**	**FY-2035-2040**
PCI	4.87%	4.37%	3.87%	3.37%
Population	1.56%	1.51%	1.46%	1.41%
NSDP	6.48%	5.73%	5.23%	4.73%

3.4 Historical Trend Analysis

Growth of traffic on a corridor or in a region depends on various factors. Though the trend of economic growth is most important among these but there are certain other factors like technological advancement in logistics which also influence growth of various modes of traffic to certain extent. A review of historic trends would help in developing an understanding of the growth of traffic. Historic traffic details on project corridor are available from year 2014-15. The following table shows a summary of traffic numbers since year 2014-15.

Table 3-21 : Historic Traffic growth data -TP1

Types of Vehicles/Year	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22	2022-23	2023-24	CAGR (%)

It can be observed from the above that traffic on the project corridor has registered growth in major cars, Truck -3 Axle and MAV which are the major components of traffic. The years 2019-20 and 2020-21 were impacted by COVID-19. LCV has shown negative growth over the period. As last few years have been affected by COVOD-19 and traffic was disturbed on all highways hence historical trends cannot be assigned must weightage for future growth projection, but project traffic has shown good growth over last year when traffic on stretch was stabilized post COVID-19. Major development in Project Influence Area (PIA)

It is imperative that developments in surrounding would impact traffic growth on project corridor. Major relevant establishments and developments in project influence area are discussed as under.

Moradabad, Bareilly, and Rampur are among major cities/districts along the project corridor.

A. Developments in and around Moradabad Area

Moradabad is situated at a distance of around 167 km from New Delhi. The city is renowned for brass work and has carved a niche for itself in the handicraft industry throughout the world. The modern, attractive, and artistic brass ware, jewellery
and trophies are made here by the skilled artisans. The attractive brass wares are exported to countries like USA, Britain, Canada, Germany and Middle East Asia.

During last few years other products like Iron Sheet Metal wares, Aluminium Artworks and Glassware's have also been included as per need of the foreign Buyers. Mentha is also exported in several crores from Moradabad. These products are very popular in foreign market and are being exported in thousands of crores every year. Due to increase of exports and popularity in foreign specially in Europe, America, Italy and other countries, a large No. of exporters are establishing their units and started their export. It is one of the seven industrial corridors under the State Govt.

There exist two Special Economic Zones for handicraft products. Provision for infrastructure facilities such as: - greenbelt, boundary wall, internal development, security system, power substation, CETP, inland container depot, design and training centre, helipad, school, canteen has been made there.

These SEZ are situated in Moradabad on both sides of Pakbara - Dhingarpur road adjacent to NH-24. The government is investing lot of money to improve infrastructural facilities to promote the industrial activities at Moradabad like 24-hour uninterrupted power supply, construction of by-pass road, proposal for widening and making the four-lane Delhi-Moradabad Road. About 450 acres of land has been acquired to develop a new industrial area for export-oriented units at Pakbara to Dingarpur Road. Over 1.10 lakh people get direct employment through these SEZ.

Apart from age old identified Brass Handicraft Cluster, Mentha Cluster is rapidly taking a shape in this area. The cultivation of Menthol at Moradabad, Sambhal, Chandusi and nearby Districts are increasing day-by-day thereby coming up the No. of Industrial Units, since Menthol is being exported in several crores, there is further scope for its development. However, lot of improvement is required on the technology upgradation front to support this sector's sustainable growth.

Here there are around 21000 industrial establishments altogether including 10000 registered industrial units. The no. of registered medium & large units is 10.

Among other type of existing small & micro-Enterprises and Artisan units comprise of Agro based, Soda water, Cotton Textiles, Woollen-Silk and artificial Thread based clothes, Jute & Jute based, Readymade garments & embroidery, Wooden Furniture's, Paper & Paper products, Leather based, Chemicals based, Rubber, Plastic & Petro based, Mineral based, Metal based (Steel Fab.) etc.

There are few Large-Scale Industries / Public Sector undertaking establishments here. The important among them are National Industries Corp. Ltd. for wine, Moradabad Dugdh Utpadan Sahakari Sangh for milk, Pashupati Acrylon Ltd. For Acrylic Fibre., Deewan Sugar Ltd. for Crystal Sugar, Milk Food Pvt. Ltd. for Milk Powder & Ghee, Zeenas Papers Products Ltd for Craft Paper, Triveni Engineering & Industries Ltd., Rana Sugar Ltd, Ayodhya Sugar Works all for Crystal Sugar, A to Z waste Management for Fertilizers, Plastic Granules and Fuel.

A Metal Handicrafts Service Center is established here for up gradation of technology, improvement quality & also providing service to the small entrepreneur. Also, a Design Center has also been established to introduce new designs and to meet the requirements of the foreign buyers and providing training to local artisans.

The town forms a large centre of trade in country produce. It has a special industry in ornamental brass ware, sometimes plated with lac or tin, which is then engraved. Cotton. weaving and printing are also carried on.

The Bone & Horn Centre: The main center of this industry is in Sambhal, nearby town in adjacent to Moradabad. The attractive goods generated by this small-scale industry are in great demand in many countries. There are about 1500 families involved in the production of these items, which provide job to about 5000 people. These items include Jewellery made out of bones and horns, Kitchen ware, Combs, Wooden sticks etc.

Printing on cloths is done at many places in the district, but Thakurdwara, Kanth and Amroha which are the main centers. District administration has established a Handicraft Corporation depot in Thakurdwara. Design for printing on cloth is provided by this depot to these cloth merchants. The final prepared product in then taken over by the corporation. There are about 6000 people involved in the profession.

Apart from brass and handicraft industries, there are about 8000 other MSMES units. Prominent among these are -Mentha oil, Rice Mills, Sugar Mills, Cement and Building material, Agricultural Instruments, Animal Feed, Coal Bricks, Oil Mill, etc. These small-scale units provide jobs to about 30000 people. There are many units of Medium and Large-Scale Industries, which includes Distillery, Sugar Mills, Pulp & Paper, Pharmaceutical & Chemical Industries etc. These industrial units provide jobs to about 40000 people. Also, there are around Fifteen 100 % Export oriented units in Moradabad.

B. Developments in and around Bareilly

Bareilly is the 7th largest metropolitan city of Uttar Pradesh and 50th largest metropolitan city of India. This fast-growing city is also known as Bans-Bareilly, due

to its big bamboo market. Bareilly is also known as the counter-magnet city because it is equidistant from New Delhi and Lucknow and has a lot of potential for setting up industries to attract people to settle.

There are around 11 Industrial Area in the Bareilly. The important among them CB Ganj, Bhojipura, Faridpur, Meerganj, Ramnagar, Bithri, Majh Gaon, Bhadpura, Aonla, Shergarh, Parsakhera.

There exists around 16000 Industrial units in total. Also, there are 15 Medium and Large number of units are there. Small industrial units provide employment to 75000 people and Medium & large industrial units provide employment to 11000 people.

Due to close proximity of Uttaranchal and being a big city in nearby area, Bareilly is developed as educational hub over the period of time.

IIFCO at Aonla, Railway workshop and few sugar mills are only few PSU & Large-scale industries which are working in Bareilly.

The service enterprises mainly include repair & servicing of motor vehicles, motorcycles / scooters, household goods, workshops, restaurants and cold storage etc.

Zari, Cane & Bamboo, Mentha and Rice mill are main cluster of Bareilly. Principal Products Manufactured in the Zari Cluster are Sari, Salwar Suit. While in Cane and Bamboo sector principal products Sofas, Lawn Furniture, Gift Item, Lamp Shed etc are manufactured. In Rice Mill Cluster main products are rice and bran.

Agro based, Soda water, Cotton textile, Woollen, silk & artificial Thread based clothes, Jute & jute based, Ready-made garments & embroidery, Wood/wooden based furniture, Paper & Paper products, Leather based, Chemical/Chemical based, Rubber, Plastic & Petro based, Mineral based, Metal based (Steel Fab.), Engineering units, Electrical machinery and transport equipment, Repairing & servicing are among existing micro & small enterprises and artisan units in and around Bareilly.

Medium & large-scale industries comprise of Rama Shyama Paper Ltd. for Posters Papers, Camphor and Allied Products Ltd. for Camphor and other allied product, Distillery of Keser Enterprises Ltd. for Undinechered ethanol alcohol, Keser Enterprises Baheri, for Sugar, Vrindavan beverage Ltd. for Mineral Water, J.K. Sugar Ltd Meerganj for Refining of Sugar, Dwarikesh Sugar Industries Ltd. for White Crystal Sugar, Oswal Overseas Ltd. for Sugar molasses, Bharat Petroleum & Bottling Plants for Cooking Gas & Bottling Plants, N.E. Railway Workshop for Repairing of Wagons, IFFCO for Ammonia Urea, Vimco Ltd. for Safety Matches, Kissan Sahakari Chini Mills Ltd. for Sugar, U.P. Sahakari Katai Mills Ltd for Cotton Yarn, Superior Industries Ltd for Alcohol.

B. Developments in and around Rampur

Rampur is Situated on the national highway NH24, at 302 km from the state capital Lucknow and at 185 Km from New Delhi. Rampur district is bounded on the North by Udhamsingh Nagar district of Uttaranchal, on the South by Badaun district, on the East by Bareilly district and on the West by Moradabad district.

There are around 6 Industrial Area in and around the Rampur. Important among them are Roshanbag, Ajeetpur, Suar, Milak, Shahabad, Pattikalan.

There exists approx. 6500 small scale and 15 medium & large-scale industries in this area. This provides employment to approx. over 30000 people.

Agro based, Soda water, Cotton textile, Woollen, silk & artificial Thread based clothes, Jute & jute based, Ready-made garments & embroidery, Wood/wooden based furniture, Paper & Paper products, Leather based, Chemical/Chemical based, Rubber, Plastic & Petro based, Mineral based, Metal based (Steel Fab.), Engineering units, Electrical machinery and transport equipment, Repairing & servicing are among existing micro & small enterprises and artisan units in and around Rampur.

Among Medium & Large-Scale Industries important establishments are Indian Toners & Developers LTD, Rampur Distillery, Giex Foods (P) LTD, Swati Menthol & Allied Chemicals LTD, Chadha Papers LTD., Rudra Bilas Kishan Sahakari Chini Mills LTD, Wheels India LTD, Triveni Engineering & Industries LTD, Rana Sugar LTD

3.5 Growth of Economy and Projection of GDP in India

There are many factors which have an impact on traffic growth. As discussed previously these factors can be economical, social, educational, and industrial.

Potentiality of such factors for project highway is discussed as under.

ECONOMY

After witnessing a slowdown during 2011-12, the economy recovered in 2013-14, and a high growth rate of GDP was recorded in up to 2018-19. Pandemic of COVID-19 impacted all economies of world including India. Following figure show trend of GDP growth in India.

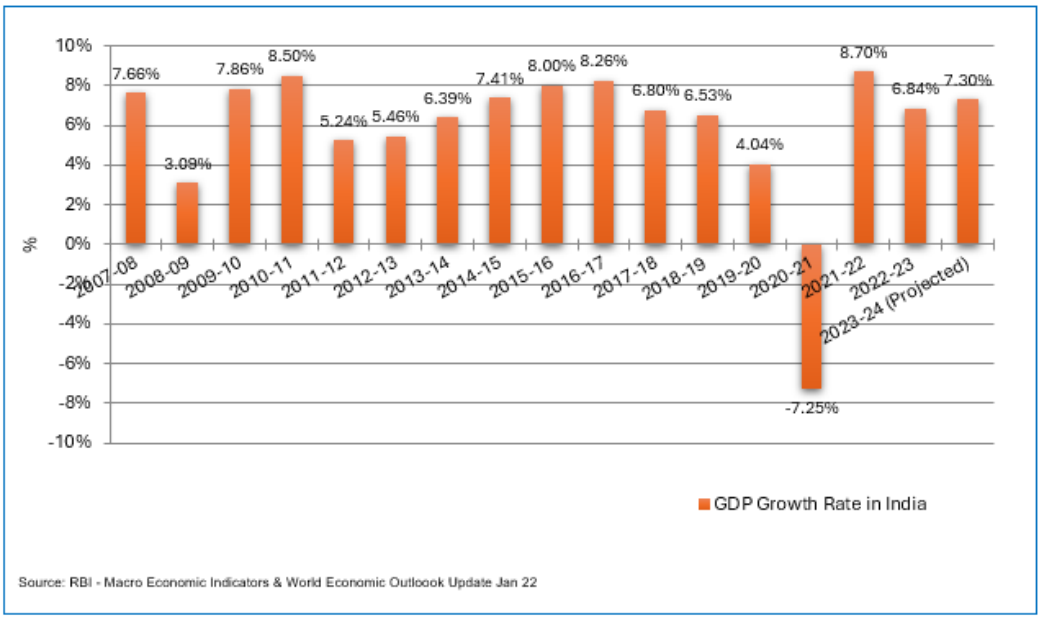

Figure 3-16 : Growth of GDP in India

FY 2017-18 recorded a growth of 6.7% which had a slight impact of GST and demonetization. Indian economy appears on recovery path with estimated growth of 6.8% in FY 2018-19. The government took major policy decisions including tax infrastructure reforming, banking sector improvement and ease of doing business.

Major economies of world collapsed due to pandemic COVID-19 including India. Indian economy is also registered negative growth in financial year 2020-21. After that Indian economy recovered handsomely and registered a growth of about 9% in Year 2021-22. This was partly due to low base of year 2020-21 as well.

Honorable Prime Minister has announced a major relief package of Rs. 20 lakh crores which is about 10% of GDP. This is aimed at turning this major crisis of COVID-19 into an opportunity by providing major impetus to industrial production to the limit of becoming a self-reliant economy. With major thrust of this package being on **Make -In-India** it is expected that industry in India would grow at rapid pace and recover handsomely in post COVID-19 scenario.

Indian economy is now on good growth path and all major institutions including IMF / ADB have estimated growth of Indian Economy to peg around 7% in coming years.

3.6 Recommended Growth Rates of Traffic

Based on the above analysis and after giving due consideration to the entire listed factors, the following overall growth rates are recommended for each category of vehicle as below. The rate of growth is moderate in light of overall regional trends. Growth of multi-Axle is kept higher as compared to LCV, 2 Axle and 3-Axle traffic, as trend of technological advances in logistic industry favors multi-axle over 2/3 axle carriage and LCV. It is also expected that as the economy moves from developing to developing, the rate of growth diminishes. Same growth rate is not sustainable for long. Hence growth rates have been suitably stepped down in future years.

Growth rates are recommended for three scenarios for sensitivity analysis namely **Optimistic, Pessimistic** and **Most Likely** with a positive and negative variation from Most Likely case for corridor in both states.

Table 3-23 : Recommended Growth Rates Most Likely -TP1 & TP2

Category / Year	FY-2023-2027	FY-2027-2032	FY-2032-2037	FY-2037-2042
Car/Jeep/Van	7.89%	7.06%	6.08%	5.07%
Bus	5.63%	5.36%	5.09%	4.83%
Minibus	5.63%	5.36%	5.09%	4.83%
LCV	3.11%	2.64%	2.36%	2.08%
2- Axle	2.72%	2.31%	2.06%	1.82%
3 - Axle	4.82%	4.09%	3.65%	3.23%
4 to 6 Axle	5.84%	4.95%	4.42%	3.91%
7 and Above Axle	5.84%	4.95%	4.42%	3.91%

Table 3-24 : Recommended Growth Rates Optimistic -TP1 & TP2

Category / Year	FY-2023-2027	FY-2027-2032	FY-2032-2037	FY-2037-2042
Car/Jeep/Van	8.14%	7.31%	6.33%	5.32%
Bus	5.88%	5.61%	5.34%	5.08%
Minibus	5.88%	5.61%	5.34%	5.08%
LCV	3.36%	2.89%	2.61%	2.33%
2- Axle	2.97%	2.56%	2.31%	2.07%
3 - Axle	5.07%	4.34%	3.90%	3.48%
4 to 6 Axle	6.09%	5.20%	4.67%	4.16%
7 and Above Axle	6.09%	5.20%	4.67%	4.16%

Table 3-25 : Recommended Growth Rates Pessimistic-TP1 & TP2

Category / Year	FY-2023-2027	FY-2027-2032	FY-2032-2037	FY-2037-2042
Car/Jeep/Van	7.64%	6.81%	5.83%	4.82%
Bus	5.38%	5.11%	4.84%	4.58%
Minibus	5.38%	5.11%	4.84%	4.58%
LCV	2.86%	2.39%	2.11%	1.83%
2- Axle	2.47%	2.06%	1.81%	1.57%
3 - Axle	4.57%	3.84%	3.40%	2.98%
4 to 6 Axle	5.59%	4.70%	4.17%	3.66%
7 and Above Axle	5.59%	4.70%	4.17%	3.66%

3.7 Traffic Forecast

Above growth rates are applied to base project traffic and traffic forecast is developed for all three scenarios.

The following tables present estimates of total traffic (AADT) at toll plaza under all three scenarios.

Table 3-26 : Total Traffic @ Toll Plaza 1- Km 172.000 (Most Likely)

Year	Car	Minibus /LCV	Bus	Truck-2 Axle	Truck-3 Axle	Multi axle (4 to 6 Axle)	Oversized Vehicles	Total Traffic	PCU (Including Exempted)

3.8 Modification in Concession Period

Concession Agreement (CA) provides for modification in concession period if there is shortfall or excess of traffic on project road in connection with target traffic.

Target date and traffic for project road is given as under

- Target Date: 1st October 2020
- Target Traffic: 30700 PCU.

As per provisions of CA

"Subject to the provisions of Clause 29.1.2, in the event Actual Average Traffic shall have fallen short of the Target Traffic, then for every 1% (one per cent) shortfall as compared to the Target Traffic, the Concession Period shall, subject to payment of Concession Fee in accordance with this Agreement, be increased by 1.5% (one point five per cent) thereof; provided that such increase in Concession Period shall not in any case exceed 20% (twenty per cent) of the Concession Period. For the avoidance of doubt, and by way of illustration, it is agreed that in the event of a shortfall of 10.6% (ten point six per cent) in Target Traffic, the Concession Period shall be increased by 15% (fifteen per cent) thereof.
Subject to the provisions of Clause 29.1.2, in the event Actual Average Traffic shall have exceeded the Target Traffic, then for every 1% (one per cent) excess as compared to the Target Traffic, the Concession Period shall be reduced by 0.75% (zero point seven five per cent) thereof; provided that such reduction in Concession Period shall not in any case exceed 10% (ten per cent) thereof. For the avoidance of doubt and by way of illustration, it is agreed that in the event of an excess of 8.7% (eight point seven per cent) in Target Traffic, the Concession Period shall be reduced by 6% (six per cent) thereof."

CA has the following provisions for traffic sampling.

As per Article-29, the Concessionaire acknowledge that the traffic as on October 1, 2020 (the Target Date) is estimated to be 30700 PCUs per day (Target Traffic) and hereby agree that for determining the modifications to the Concession Period under this Article 29, the actual traffic on the Target Date shall be derived by computing the average of the traffic as determined by traffic sampling to be undertaken, in accordance with Clause 22.3, on the date that falls one year prior to the Target Date, on the Target Date and on the first anniversary of the Target Date (the "Actual Average Traffic"). For the avoidance of doubt, it is agreed that traffic sampling shall be undertaken for a continuous period of 7 (seven) days during anytime within 15 (fifteen) days prior to the date specified herein and the average thereof shall be deemed to be the actual traffic. It is further agreed that if the Project Highway shall have two or more Toll Plazas, the average traffic thereof shall be computed for determining the Actual Average Traffic

Independent Engineer had worked out modification in concession period and recommended that concession period shall be reduced by 7.41% as actual traffic on project road has exceeded the target traffic.

Concessionaires have submitted their objections to the above calculations based on two main observations.

- PCU factor of 3 Axle Truck is considered by Independent Engineer as 4.5 whereas as per IRC 64: 1990 PCU factor is 3.0.
- Independent Engineer considered the average of last two weeks of September and first two weeks of October for arriving the actual traffic on target date which is not as per CA.

Both the above observations of Concessionaire are in confirmation with the provision of CA.

Further concessionaire has argued that in period of September 2020 traffic is very much on higher side and September 2021 traffic is less as compared to September 2020 traffic as the September 2020 is the post Covid recovery period and the traffic substantially high on the road and cannot be treated as normal. The trade-off between railways and road in both freight and passenger movement has changed drastically during the period and the drop in rail carriage has resulted in a surge on roads same can be observed among the Car, Bus and 3-axle and MAV traffic numbers.

Concessionaire submitted that traffic during September 2020 should be ignored for working out the average traffic for modification concession period. Thus, the average actual traffic and resultant modification in concession period works out as under.

Ignoring September 2020 Traffic – 29755 PCU (Target Traffic 30700 PCU) - Change in concession period = **4.6 % increase in concession Period**

Taking into account September 2020 Traffic – 31063 PCU (Target Traffic 30700 PCU) - Change in concession period = **Nil, as variation of actual traffic from target traffic is within 2.5%.**

It is expected that concession period will get an extension of 4.6% as concessionaire's submissions are in line with CA. But if COVID factor is ignored by authority then the concession period shall remain same and there is no modification in concession period due to variation in actual traffic.

CHAPTER 4
FORECAST OF TOLL REVENUE

4.1 General

This chapter presents the estimates of traffic forecast, tolling categories, tolling rate calculations and toll revenue of the project.

4.2 Toll Rate Guidelines

As per the Toll Notification (Schedule R) the following acts and rules have been considered:

- National Highways Fee (Determination of Rates and Collection) Rules, 2008
- National Highways Fee (Determination of Rates and Collection) Amendments as applicable

4.3 Discounts

As per the Fee Notification (Schedule-R) fee discounts shall be provided to project users as under

- Local discount for noncommercial vehicle owner with in 20 km of toll plaza applicable
- Discount for commercial vehicles registered under same district as of Toll Plaza applicable.

4.4 Travel Passes

As per the Fee Notification (Schedule-R) fee discounts shall be provided to project users as under

1. Monthly Pass: For frequent user's monthly pass would have not more than 50 trips per month at 2/3rd rate. The discount factor works out to about 67%.
2. Daily Pass (for Return Trip): A 25% discount will be offered on the return trip.
3. Single Journey: Full single journey toll would be charged to this category of vehicles who are infrequent travelers or whose frequency does not yield any discount from the above categories.

4.5 Estimation of Toll Rates

As per the recent MORTH notification dated January 12, 2011, the following Base rate of fee for the categories mentioned in the table stands true in the National Highways Fee Rules, 2008.

Table 4-1 : Base Toll Rates 2007 - 08

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Minibus	1.05

Type of Vehicle	Base Rate of Fee / Km (in Rs.)
Bus or Truck (2 Axle)	2.2
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (4-6 axles) including Truck-3 Axle	3.45
Oversized Vehicle (seven or more axles)	4.2

Factors of inflation / growth have been incorporated as per Schedule R. WPI are available up to the year 2023-24.

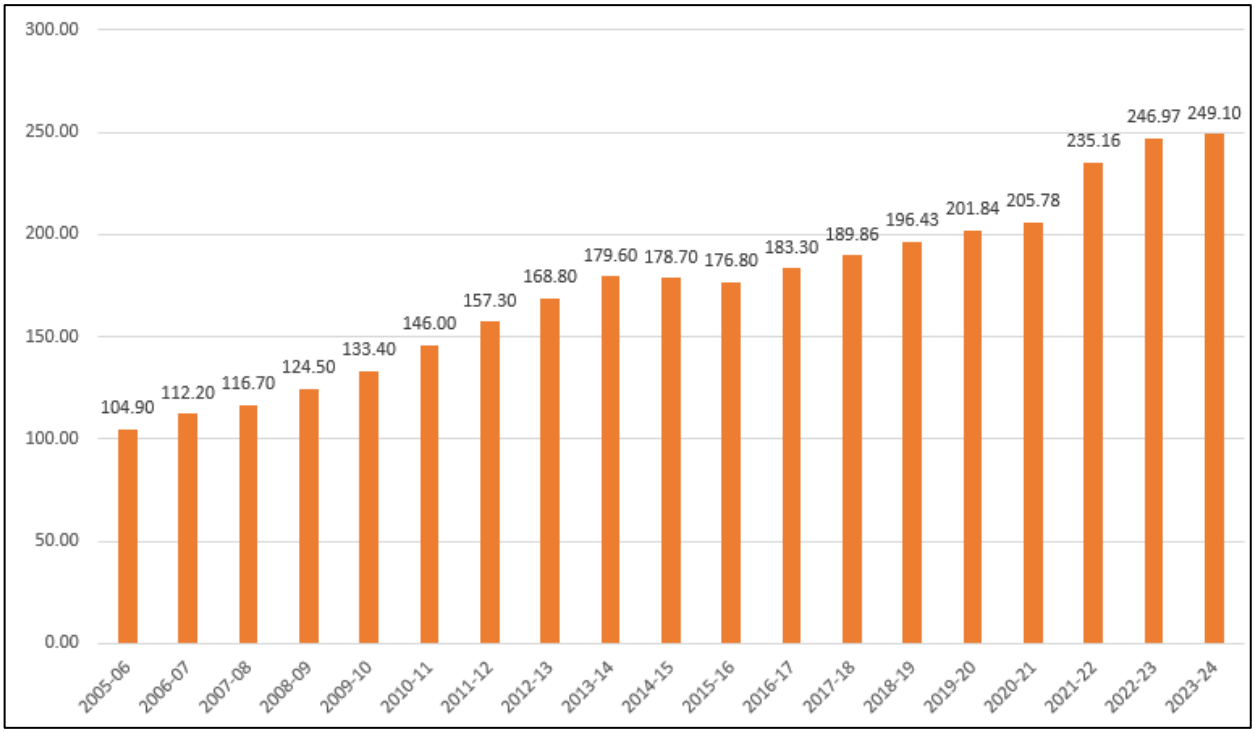

Figure 4-1 : Historical Rate of WPI Inflation in India

The historical WPI data and its respective growth from Year 2018 to up to March-2023 is summarized below.

Table 4-2 : Historical WPI value and Growth Sceneries

Average												**4.97%**	**5.10%**

In current year the inflation in Indian economy has eased out abnormally due to various factors. As per experts, this is expected to be a short phase trend, and inflation is likely to pick up again in future. It can be observed that there has been huge variation in inflation in a shorter period, but overall, historically, WPI has grown by about 5%. Hence there is a high possibility that WPI inflation next year would increase to a high figure or so to make up for this year. Hence projected WPI inflation of 3.5% in Dec.2024, 6.5% in Dec.2025 and 6.5% in Dec.2026 considered to keep about 5.75% average inflation over this period. For further future years (2028-29 onwards), as expected, normal 5% inflation in WPI is considered.

In the state of Uttar Pradesh, the last date of polling is 2nd June 2024. Revision of rates as per toll revision policy is adopted after 2nd June 2024 only.

Thus, worked out rates for various categories of vehicle and discounts are given as Under.

4.6 Toll Revenue at all toll plazas

Toll revenue at all toll plazas is worked out on the basis of the above rates and traffic projection for three scenarios, i.e. Most Likely, Pessimistic and Optimistic case is given in tables below.

Table 4-10 : Toll Revenue- Most Likely Scenario (Rs. Crores)

Year	TP-1	TP2	Total
2024-25	194.17	146.95	**341.13**
2025-26	214.81	162.12	**376.93**

2037-38	732.78	531.46	**1264.25**

CHAPTER 5
CONCLUSION & RECOMMENDATION

5.1 General

Project road from Moradabad to Bareilly is an important link for connecting Western Uttar Pradesh, NCR and other northern states to Eastern Uttar Pradesh and Bihar, Bengal. Link also connects Eastern part of Uttarakhand (Rudrapur, Haldwani, Nanital, Bilaspur) with Delhi NCR and Western Uttar Pradesh.

Conclusion & Recommendations

Project stretch has committed traffic with potential of growth. Both toll plazas have shown considerable growth in traffic volume post COVID-19 which is likely to continue in future as well.

1 INTRODUCTION

1.1 Background

Sikar Bikaner Highway Limited (SBHL) has appointed Segmental Infrastructure & Management Services (SIMS) as the Traffic Consultant to assess the traffic forecasting and toll revenue estimation for the Sikar Bikaner Highway, which is a section of the National Highway 11 from Km. 340.188 to Km. 557.775 via Sikar Bypass and Bikaner Bypass (from km. 553.869 of NH-11 to km. 267.325 of NH-89 on the Sikar-Bikaner section of National Highway 11).

The project road was improved to two lane with paved shoulders (has four lane configuration for 17.78 km near Sikar) under the design-build-finance-operate-transfer basis. A concession agreement dated June 29, 2012 was entered into between Public Works Dept., Govt. of Rajasthan (on behalf of Ministry of Road Transport & Highways, Govt. of India) and SBHL. The project commenced tolling on October 10, 2015. The concession period for this project is 25 years commencing from February 2013 (till 2038-39). As per the letter submitted by SBHL to 'The Independent Engineer' of the project (vide letter no. SBHL/PRJ/TEC/ICO-581/3319, dated June 21, 2023, regarding Effect of Variations in Traffic Growth.), SBHL has requested for extension of concession period for 20% of 25 years, ie; for 5 years). According to the concession document, the actual average traffic and the impact on concession period must be computed as on April 1, 2024, after considering the traffic prevailing on first anniversary of Target Date (March 31, 2023). The Independent Engineer has verified the actual traffic details in accordance with the clause regarding the Target Traffic and recommended extension for traffic variation for five years upto 30.03.2043 (Independent Engineer letter reference: No. IE/NH-11/SIKAR-BIKANER/130/376 dated 14.09.2024). The recommended extension of concession period is presumed in the study and 2043-44 is adopted as the concession end year.

1.2 Project Road Features

Project road has a length of 237.578 km (as per the provisions of the Concession Agreement) and passes through the three districts of Rajasthan namely Sikar, Churu and Bikaner. It acts as an important connectivity for these districts as well as the north and west Rajasthan with the state capital, Jaipur. It provides better connectivity to Bikaner, a major tourist destination in Rajasthan. The important towns and settlements along the project corridor are Sikar, Laxmangarh, Fatehpur, Ratangarh, Shri Dungargarh and Bikaner. The Project Road is presented in Figure 1.1. Toll plazas are present at four locations (source: Schedule R) as presented below.

- Toll plaza 1, (Km 362.475, Rashidpura TP) in Sikar district
- Toll plaza 2, (Km 419.000, Tidiyasar TP) in Churu district
- Toll plaza 3, (Km 5076.878, Lakhasar TP) in Bikaner district
- Toll plaza 4, (Km 1.148 on Bikaner bypass, Udairamsar TP) in Bikaner district

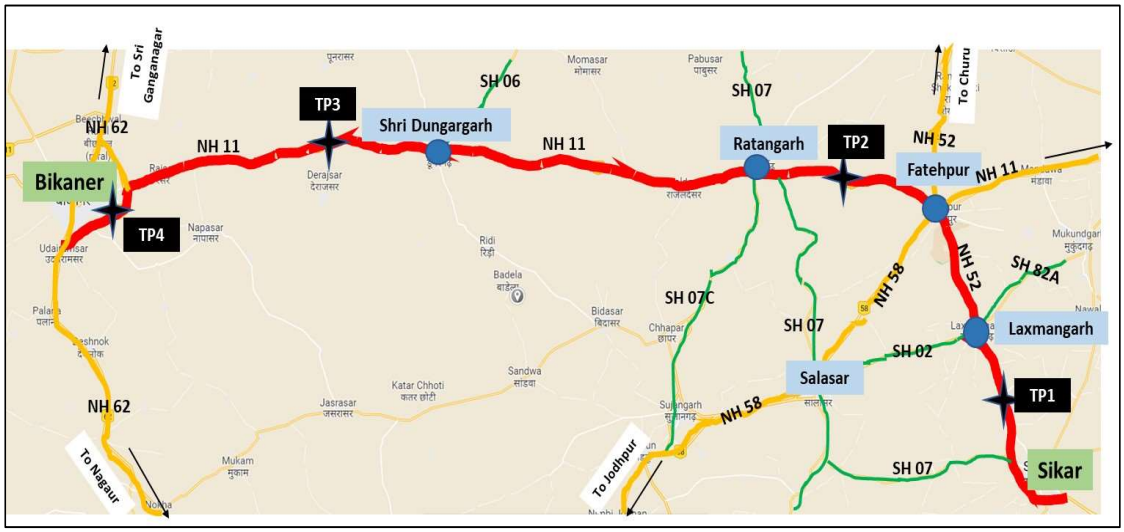

Figure 1-1: Project Road

View of Toll Plazas

Project road consists of three national highways and could be considered as three sections based on the traffic characteristics, such as;

1. Segment 1: Sikar- Fatehpur (NH 52)
2. Segment II: Fatehpur- Bikaner (NH 11)
3. Segment III: Bikaner bypass (NH 62)

The three sections are presented in Figure 1.2 details are presented below.

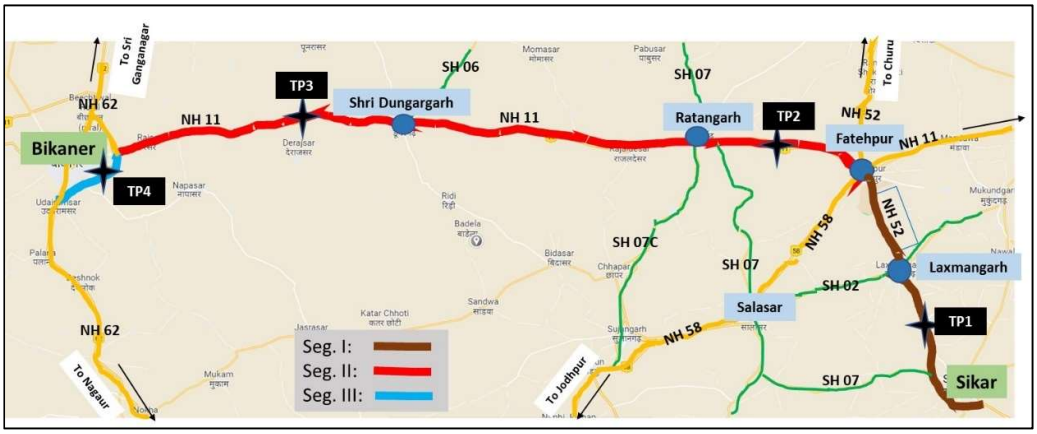

Figure 1-2: Project Road Segments

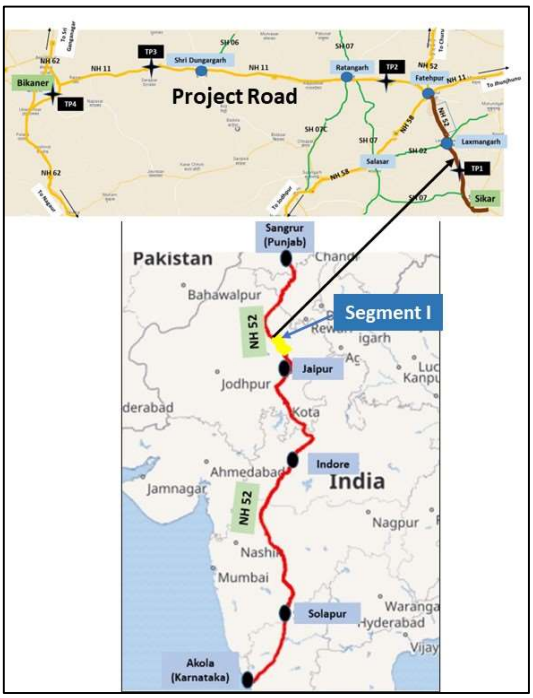
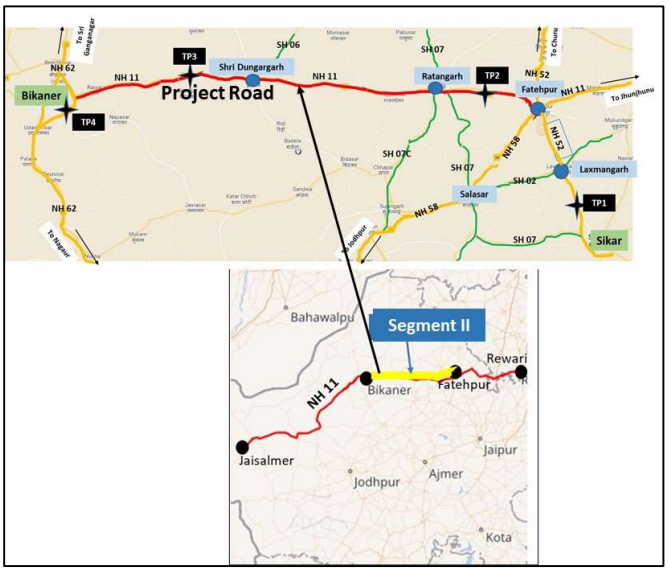
- **Traffic Segment 1: Sikar- Fatehpur (NH 52)**
  - NH 52: NH 52 runs in N-S direction, from Sangrur in Punjab and passes through Haryana (Narwana, Hisar), Rajasthan (Fatehpur, Jaipur, Tonk, Kota), Madhya Pradesh (Aklera, Biora, Dewas, Indore), Maharashtra (Dhule, Aurangabad, Osmanabad), Solapur, Bijapur, Hubballi to Ankola in Karnataka. Passes through Jaipur (capital of Rajasthan)
  - Toll plaza: TP 1, (Rashidpura TP)
  - Towns on the section: Sikar, Laxmangarh and Fatehpur
  - Other major roads crossing/bifurcating from the section are:
    - NH 58 (connecting Fatehpur and Palanpur in Gujarat) bifurcates at Fatehpur on NH 52
    - NH 11 (linking between Jaisalmer (Rajasthan) and Rewari (Haryana)) crosses NH 52 at Fatehpur
    - SH 82A (road runs from Laxmangarh to Mukundgarh)
    - SH 07 (Sikar- Ratangarh- Sardarshahar, Hanumangarh road)
  - Connectivity: Connecting to various parts of Rajasthan including Jaipur with Haryana/Punjab and Maharashtra/Karnataka, etc.

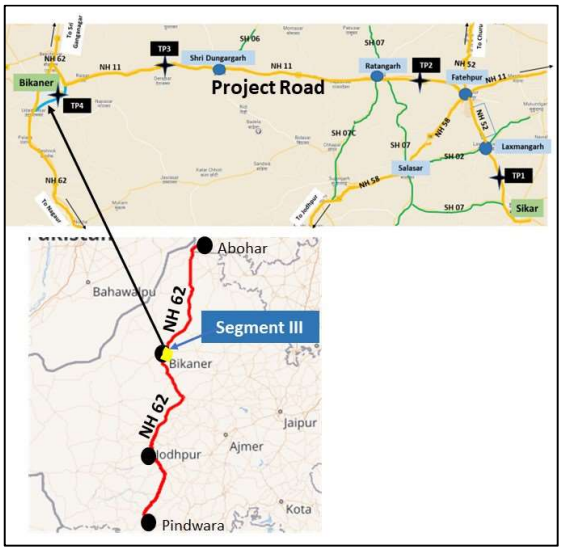


- **Segment II: Fatehpur- Bikaner (NH 11)**

- NH 11: The 848 km long NH runs in E-W direction, passes through Rajasthan (Jaisalmer, Pokran, Bikaner, Ratangarh, Fatehpur, Jhunjhunu) and Haryana (Narnaul, Ateli and Rewari)
- Toll plaza: TP 2 (Tidiyasar TP) & TP 3 (Lakhasar TP)
- Towns on the section: Bikaner, Shri Dungargarh , Ratangarh and Fatehpur
- Other NHs crossing/bifurcating from the section are:
  - NH 58 (connecting Fatehpur and Palanpur in Gujarat) bifurcates at Fatehpur on NH 52
  - NH 11 (linking between Jaisalmer (Rajasthan) and Rewari (Haryana)) crosses NH 52 at Fatehpur
  - SH 07 crosses the road near Ratangarh
- Connectivity: Connecting Rajasthan with Haryana



- **Segment III: Bikaner Bypass (NH 62)**
  - NH 62: NH running in the N-S direction, connecting Abohar in Punjab to Pindwara in Rajasthan, passing through Bikaner and Jodhpur
  - Toll plaza: TP 3 (Bikaner Bypass TP)
  - Town on the section: Bikaner,
  - Other NHs crossing/bifurcating from the section:
    - NH 11 crosses NH 62 at Bikaner
  - Connectivity: Connecting Rajasthan with Punjab and Gujarat.



The project road is mainly used for travelling within Rajasthan. The development of few roads in the vicinity had impacted the traffic, especially the interstate traffic movement through the project road. They include:

Development of New link of NH 58 (NH running between Fatehpur and Palanpur) from Fatehpur to Salasar: NHAI has developed a new link road connecting Fatehpur and Salasar as part of NH 58 development from Rajasthan/Haryana border -Churu- Fatehpur- Salasar section (refer Figure 1.3). The link is with two lane configuration and started operation in 2017 with toll. With this new link and

improvement of Salasar - Nagaur section, NH 52/58 became the prime corridor connecting Punjab/Haryana with Rajasthan/western Gujarat.

- Development of State Highways: Rajasthan Govt. has developed many state highways in the state for the inter urban movements under BOT toll. Few of them are in the neighborhood of the project road. They are:
    - SH 07: The road is from Sikar to Hanumangarh via Salasar, Ratangarh, Sardarshahar and has developed to two lanes recently (refer Figure 1.3). This road is an alternate to the section of project road from Ratangarh to Sikar (bypassing TP1 and TP2).
    - SH06: This SH starts from Sri Dungagarh (NH 11) and ends at Sadalpur on NH 52 near Rajasthan/Haryana border via; Sardarshahar and Taranagar(refer Figure 1.3). It is developed with two lanes with paved shoulders and is a toll road. It runs in the east west direction along the north of the project road and diverted traffic on the project road (TP2).
    - The stretch of newly constructed Amritsar-Jamnagar expressway (between Jakhrawali in Hanumangarh district and Khetlawas in Jalore district) crosses the project road near Norangdasar on NH 11. This section was inaugurated in July 2023 and is partly operational. It is acting as an alternate to TP4 for the traffic plying between north and south of Bikaner.

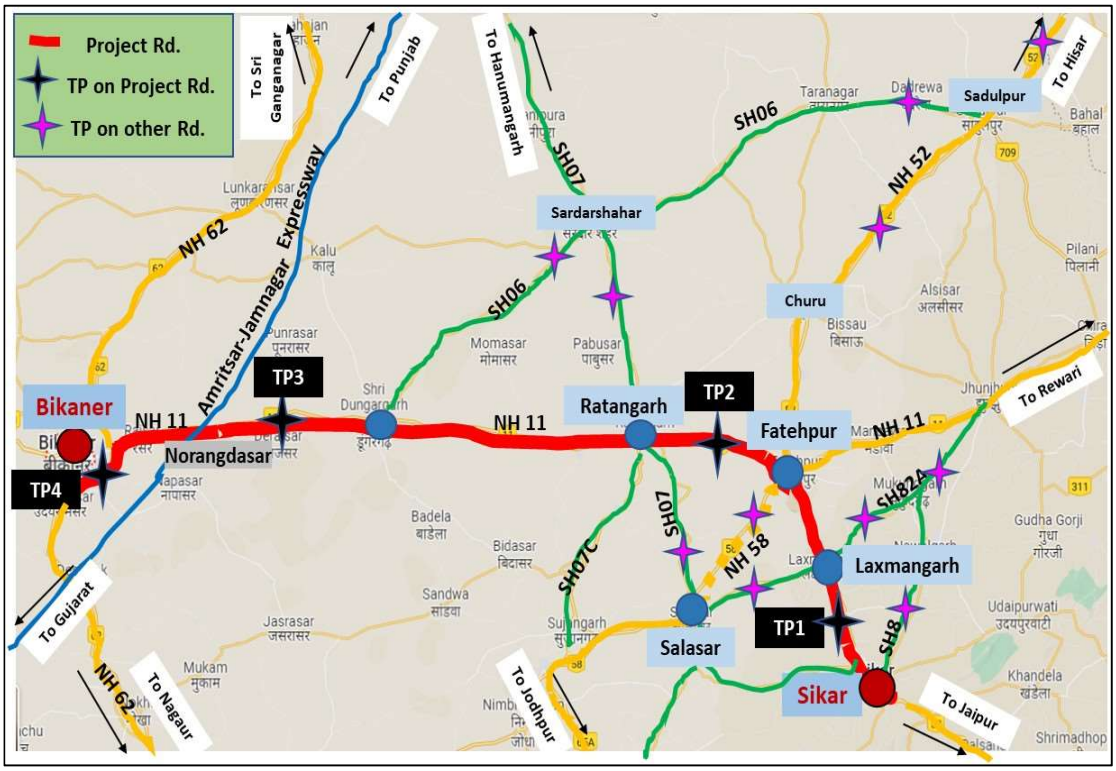


Figure 1-3: Vicinity Road Network

1.3 Objectives and Scope of Services

The prime objective of the present study is to update the traffic and toll revenue forecast based on the actual traffic scenario as of September 2024. The scope of the study is as listed below:

a) Updation of the traffic report submitted by consultant in the month of Apr. 2024
b) Collection of Class wise Traffic data from the TMS System/Toll Records from the operational toll plazas on the project road upto September 2024 to derive the Average Daily Traffic (ADT).
c) Establishing seasonality factors using available past traffic data and/or from using fuel sales data or using the past actual traffic data or any relevant data (if needed)
d) Estimation of Annual Average Daily Traffic (AADT) for financial year 2024-25 from ADT and adopting suitable seasonal factors
e) Updation of projections of traffic and revenue based on the actual traffic and revenue observed as of September 2024.

1.4 Organization of the Report

As mentioned above the present study focuses on updating the traffic report submitted in Apr. 2024 and no fresh traffic surveys are carried out. The details of the traffic surveys (OD surveys) done as part of the initial study is reproduced here. The traffic and revenue projections are made using the traffic growth rates of the previous study. The report is organized in seven chapters.

Chapter 1 Brief background of the project and scope of study

Chapter 2 Socio economic profile of the project area

Chapter 3 Toll traffic data analysis and estimation of tollable AADT (2024-25) based on the traffic data from Apr. to Sept. 2024.

Chapter 4 Traffic OD surveys and data analysis (reproduced from the earlier report)

Chapter 5 Upcoming Road Projects & Impact Assessment

Chapter 6 Traffic growth rate estimation (reproduced from the earlier report) & Traffic Projection

Chapter 7 Updated Toll revenue projection

2 STUDY AREA PROFILE

As mentioned in Chapter 1, the project road passes through the state of Rajasthan. Hence, the socio-economic profile of Rajasthan is discussed in this chapter.

2.1 Socio-Economic Profile

2.1.1 Rajasthan

Rajasthan is situated in the north-western part of the subcontinent and is the largest state by area (3,42,239 sq kms), in India. It is surrounded by Punjab on the north, north-east by Haryana and Uttar Pradesh; Gujarat to the south west and Madhya Pradesh on the south east. Pakistan is bordering the western part.

Rajasthan is a natural corridor between the wealthy northern and the prosperous western states, making it an important trade and commerce centre. Jaipur, Jaisalmer, Udaipur, Jodhpur, Ajmer, Bikaner, Alwa and Chittorgarh are some of the important cities and towns in the state. The socio economic profile of the State is summarized in Table 2-1.

Table 2-1: Socio economic profile of Rajasthan

Sl No	Parameters	Values
1	Population	81.0 million (#)
2	Administrative districts	33
3	Population density (persons per sq. km)	200

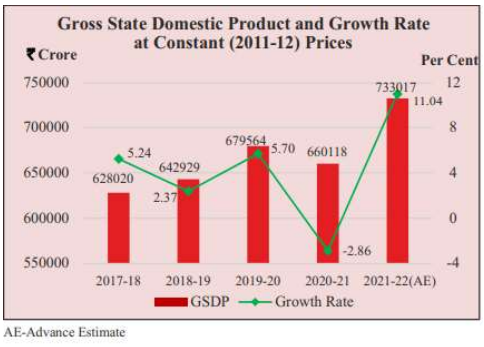
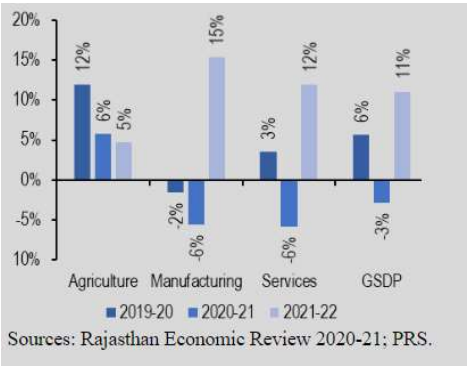
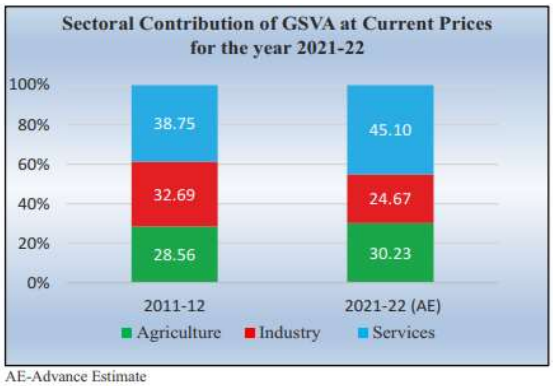
GSDP, NSDP and Per Capita income growth trend of the state is given below.

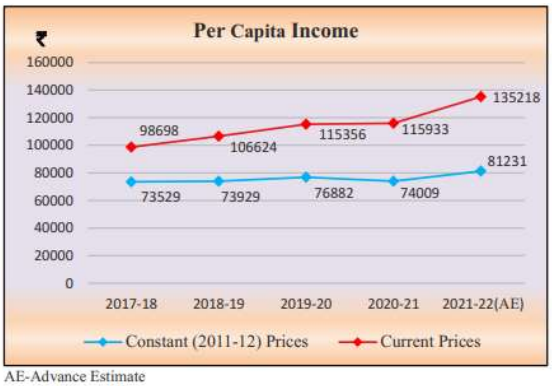


AE-Advance Estimate





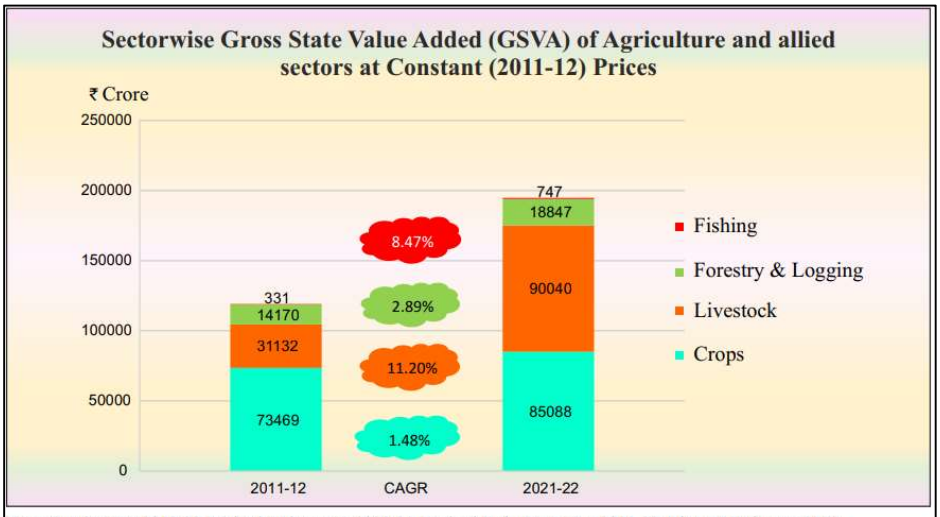
AE-Advance Estimate



AE-Advance Estimate

Agriculture: Agriculture and allied sectors continues to be an important segment of the state's economy and a large contributor to the state's GSDP. There has been a constant increase in the Gross State Value Added (GSVA) of Agriculture and allied sectors at constant as well as current price; it increased from ₹1.37 lakh crore in 2015-16 to ₹1.95 lakh crore in 2021-22, showing a compound annual growth rate 5.04 percent at constant prices. As per preliminary forecast for the year 2021-22, the total food grain production in the State is expected to be 225.20 lakh tonnes, which is a decrease of 16.31 per cent over the production of 269.09 lakh tonnes in the previous year.

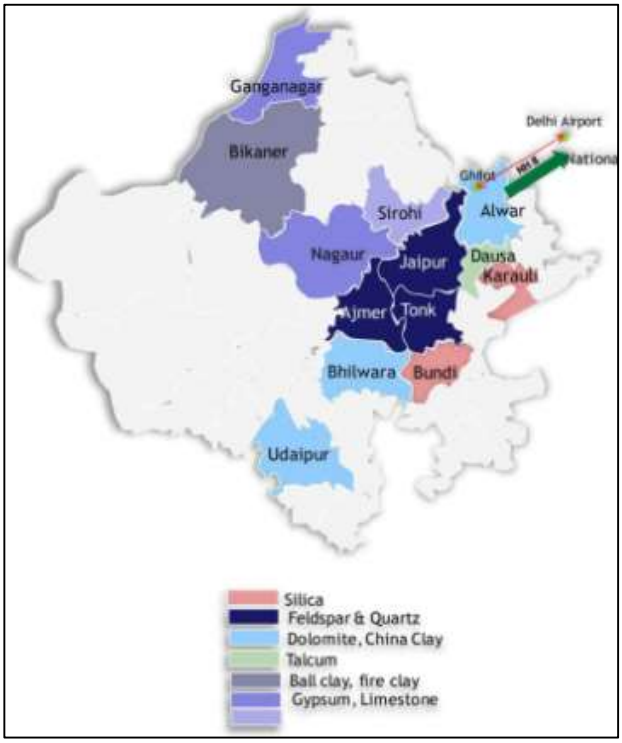
Industrial Sector: The Industry sector comprises of mining & quarrying, manufacturing, electricity, gas, water supply & other utility services and construction. The Gross State



Note: For the Year 2019-20 Revised Estimate-II, 2020-21-Revised Estimate-I, Year 2021-22 Advance Estimates (AE)

Value Added (GSVA) of Industry sector increased from ₹1.36 lakh crore in 2011-12 to ₹1.78 lakh crore in 2021-22, showing an increase of 2.69 per cent (CAGR) at constant (2011-12)

Mineral Resources: Rajasthan is the richest state in the country in terms of availability and variety of minerals. It has deposits of 81 different types of minerals, of which 57 are being currently mined. Rajasthan is the sole producer of lead & zinc ores, selenite and wollastonite. Almost entire production of silver, calcite and gypsum in the country is from Rajasthan. The state is also the leading producer of ball clay, phosphorite, ochre, steatite, felspar and fire clay in the country. It also occupies prominent position in the country in the production of dimensional and decorative stones, such as marble, sandstone, granite etc. The state is leading producer of cement grade & steel grade limestone in India. The mineral deposits of the state is presented here.



Hindustan Zinc Limited (HZL) has four mines in Rajasthan. The mine at Rampura Agucha has zinc ore production capacity of 6.15 million ton per annum (MTPA). Sindesar Khurd mine has reserves and a resource base of 85.0 million tonnes and production capacity of 2.0 MTPA. The Zawar mine has a reserves and resources base of 76.4 MT, with ore production capacity of 1.2 MTPA.

Crude oil production: Rajasthan is the 2nd largest producer of crude oil in India, The state contributes about 22-23 per cent (7 MMTPA) of total crude oil production (32 MMTPA) in India.

Petroleum producing area in the state is spread over of about 1,50,000 sq. km under 4 petroliferous basins.

i. Barmer-Sanchor Basin - (Barmer and Jalore)

ii. Jaisalmer Basin - (Jaisalmer district) Jaisalmer

iii. Bikaner-Nagaur Basin - (Bikaner, Nagaur, Hanumangarh and Churu districts)

iv. Vindhyan Basin - (Kota, Baran, Bundi, Jhalawar, part of Bhilwara and Chittorgarh district)

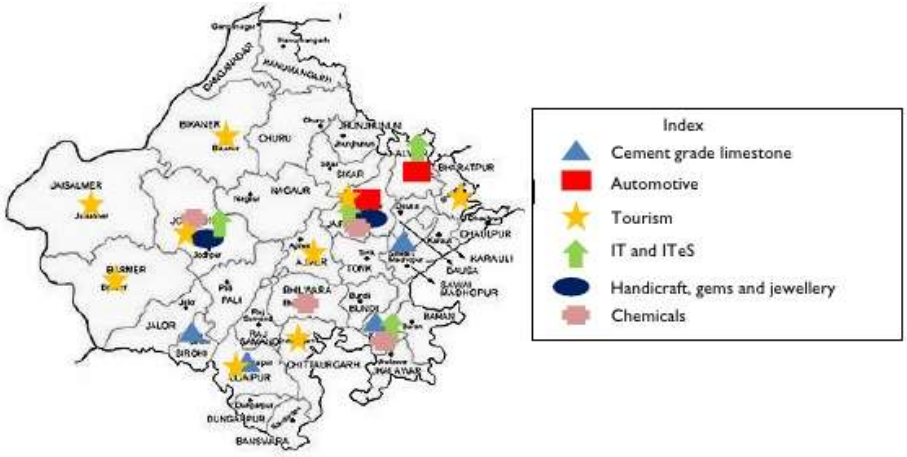
Cement Production: As mentioned earlier, the state is the leading producer of cement grade limestone in India. Production of limestone during 2017-18 reached about 54.00 million tonnes, accounting for more than 20 per cent of India's limestone production. The state has about 26 per cent share in proven limestone reserves in the country. Ultratech Cement is going to set up a 3.5 MTPA greenfield integrated cement plant in Rajasthan with an investment of US$ 287.76 million.

ACC, the largest cement producer in India; its plant is located at Lakheri (Bundi), Rajasthan, has a production capacity of 1.5 MTPA. The company has an integrated cement plant at Rabriyawas (District Pali), with a capacity of 2.8 MTPA. Other key players in cement industry of Rajasthan are, Ambuja Cements Limited, (cement plant at Rabriyawas, Pali District, has a production capacity of 2.8 MTPA), Shree Cement (has plants at Beawar, Ras, Khushkhera, Suratgarh and Jaipur) and UltraTech Cement has a capacity of 53.9 MTPA (has plants at Kotputli and Shambhupura).

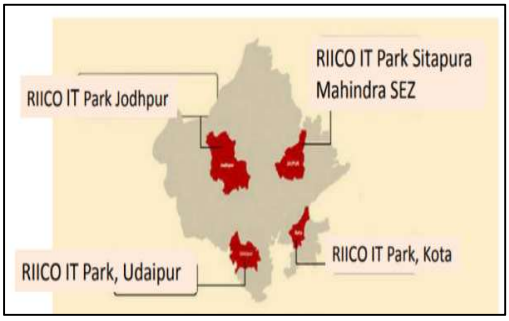
Marble: Rajasthan account for India's 90% of marble, slate and sand stone production and has monopoly in other ceramic minerals.

The industrial infrastructure of the state include; 323 Industrial areas, IT Parks, SEZs, Agro Parks, Stone Parks, Solar Park, Leather Park etc. RIICO has set up 340 industrial areas by acquiring 84,202.57 acres of land.

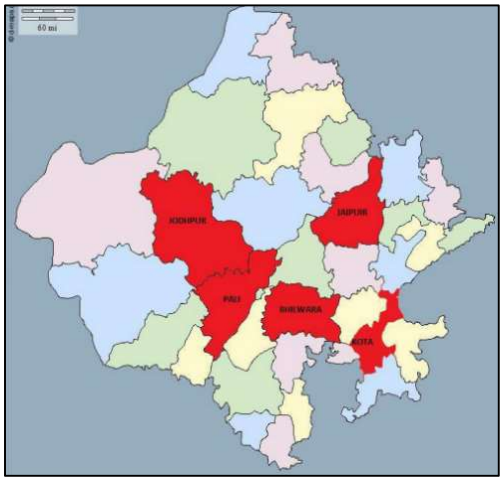
The industrial clusters in Rajasthan developed by RIICO are presented here.



IT sector: Rajasthan is emerging as a leading destination for ITES. Home to several IT players such as GENPACT, Wipro, Infosys and Deutsche Bank including home-grown companies like Data Infosys, E-Connect and Metacube. India's largest ITES SEZ — Mahindra World City- located in Jaipur with a total area of 3,000 acres has 750 acres dedicated for ITES.



Textile Industry: Textile industry in Rajasthan is present across the value chain from spinning to made-ups. The state accommodates more than 2,000 garment manufacturers. Bhilwara is the largest producer of polyester and viscose textiles in the country. Jaipur has a fashion garment hub and Jodhpur, Pali , Sanganer, Kota are known for traditional handloom, fabric and printing. Important textile clusters of Rajasthan is presented here.



Tourism: Rajasthan is one of the most popular tourist destinations in India, for both domestic and international tourists. The state attracts tourists for its historical forts, palaces, art and culture. Every third foreign tourist visiting India travels to Rajasthan as it is part of the Golden Triangle for tourists visiting India. Tourism accounts for approximately 15% of Rajasthan's economy. It is the third largest employer after agriculture and textile. The state's popular tourist attractions that include historic cities (Jaipur, Udaipur), wildlife sanctuaries (Sariska, Ranthambore) and deserts (Jodhpur, Jaisalmer). In 2019, 52.0 million domestic tourists and .61 million foreign tourists visited Rajasthan. Tourism accounts for eight percent of the state's domestic product.

2.1.2 Socio-Economic Profile of Project Influence Districts

The project road passes through three districts of Rajasthan namely Sikar, Churu and Bikaner.

Sikar District: The district is located in the north-eastern part of the state of Rajasthan. It is bounded on the north by Jhunjhunu district, in the north-west by Churu district, in the south-west by Nagaur district and in the south-east by Jaipur district. This district has a population of 26 lakhs, with a population density of 346 persons/sq km (Census 2011).

Sikar was the kingdom of royal Shekhawat rajas and many royal Shekhawat family reside in Sikar. One of the great shekhawat, Mr Bhairon Singh Shekhawat, former Vice President of India also belongs to Sikar. Three most prominent business homes of the country viz. the Bajajs, the Birlas and the

Goenkas also belong to the Sikar district. Most of the Marwari businessmen community residing in Assam, W.Bengal, Surat, Bengaluru and Hyderabad also belong to Sikar.

Huge deposit of pyrite - pyrrhotites which is mined extensively for sulphur extraction exists in the district. Other mineral deposits include Limestone, Quartz and Phelsphar.

The large scale/public sector undertakings in the district include

1. Aksh Technologies Ltd.,Sh.Khatoo Shyam ji, Industrial Complex, Reengus
2. Raj. Spinning &Weaving Mills.Sp-1,Industrial Area Ringus-332404
3. H.S.B.Agro INd.Pvt.Ld.Spl. 67 Shree Khatu Shyamji I.A. Sikar
4. Binani Cement Limited Vill.SIROHI,(Neemkathana) Sikar(Raj.)
5. Agrobiotech Industries Ltd.,SP-156 Ind.Area Ajeetgarh
6. Arsh Dairy Max Ltd. Vill. Paras ram pura sri madhopur

Major item exported from the district is synthetic blended yarn. DM Motors in the district supply motor parts to Mahindra and Mahindra industry.

Sikar is also famous in coaching institutes for Medical, Engineering entrance and competition exams. So, a large number of employments generated due to coaching institutes.

Churu District: Churu, located in the desert area of Rajasthan is considered as the entry gate to the great Thar Desert. This district has a population of 20 lakhs, with a population density of 147 persons/sq km(Census 2011). Churu is not rich in minerals, various mineral deposits are copper salt petrel, sand stone, limestone, gypsum etc. and these deposits are very small in size and not of much economic importance.

There are no large scale industries or public sector undertaking enterprises in Churu. The details of the artisan units in Churu district are given below.

CONCENTRATION OF ARTISAN UNITS

S.No.	Products	Area of concentration
1.	Handloom Cloths (Cotton & Woolen)	Bidasar, Salsar Ratangarh Churu Bardasar Rajaldesar etc.
2.	Embroidery & Hosiery	Sujangarh, Navrangpura, Rajaslesar, Sardarshahar, Ratangarh, Churu etc.
3.	Furniture Wooden &Wooden Handicraft	Sardarashar, Ratangarh, Churu etc.
4.	Leather Items Desi juti	Sujangarh, Biddasar, Rajsldesar, Rajgarh, Sardarashar, Ratangarh, Churu, Taranager etc.
5	Earthen Pots	Rajgarh, Chandgothi, Poolasar, Sujangarh, Sahawa Bynya etc.
6	Luhar (Block smith)	Poolasar, Sardarshahar, Bidasar, Sujangarh, Salasar etc.

Existing clusters of micro and small enterprise include Manufacturing Sector (1) Leather Juti Cluster (2) Wooden & Stone Cluster (3) Plaster of Paris Cluster (4) Papad Bari Cluster (5) Tie & Die Cluster (6) Handloom Cluster

Bikaner District: This district has a population of 23 lakhs, with a population density of 78 persons/sq km(census 2011).

The district is bounded by Ganganagar District to the north, Hanumangarh District to the northeast, Churu District to the east, Nagaur District to the southeast, Jodhpur District to the south, Jaisalmer District to the southwest, and Punjab Province of Pakistan to the northwest. Bikaner is an agricultural district with cereals, pulses and oilseeds being the main agricultural products of the region. The district has few registered small-scale industries. Almost the entire district is devoid of rock exposures except near Kolayat and at a few places in the southern parts of Nokha and Dulmera. The district Bikaner is thus vast sandy racks except Kolayat are covered with sand of Rock locally known as “Magra” are found is parts Kolayat tehsil.

Being almost a desert area and thus negligible forest growth, scarcity of water resources and low production of agricultural crops, the pace of industrial development in the district has remained at the lower side.

2.2 Summary

This chapter presents the socio-economic profile of the project influencing state, ie; Rajasthan, in general and the project influence districts of Sikar, Churu and Bikaner in particular. The state has strong economic growth and is predominantly industrial based. In addition to the location advantages, Rajasthan has abundant mineral resource, blooming tourism opportunities, etc.

The socio-economic profile of the region is highly correlated with the traffic characteristic on the project corridor. While the passenger traffic mainly relates to the population, service, education, health and tourism sectors in the project influence region, the commercial traffic is mainly influenced

by the industries located in the project influence districts, road/rail/port connectivity and the agricultural base of the region, in addition to the linkage the corridor provides to other regions.

3 ANALYSIS OF DATA COLLECTED THROUGH SECONDARY SOURCES

3.1 Toll Traffic Data & Analysis

The following toll traffic data has been provided by the client for the four toll plazas on the project road:

1. Monthly traffic and revenue data from Oct. 2015 (date of Commercial Operations -COD) to Sept. 2024 for the tollable vehicle types. This data is used for estimating the following;
    - The monthly toll traffic data from April to September 2024 has been used to calculate the Average Daily Traffic (ADT) for the year 2024-25 and the corresponding Annual Average Daily Traffic (AADT) has been estimated by applying seasonal factors derived from the monthly toll traffic data fof 2023-24.
    - Monthly summary traffic for the period between Oct. 2015 and Mar. 2024 which helped to understand the past growth trend of traffic on the project road.
2. The class wise traffic data received from SBHL include information on the type of tickets availed by the vehicles (ie; single, return, local pass/concession, monthly pass and exempted) and considered to estimate the toll ticket categorisation of the vehicles.

The toll categories as per the data includes:

- Car/Taxi/LGV (Light Goods Vehicles)
- LCV (Light Commercial Vehicles) /Mini Bus
- Bus
- 2 Axle Truck (2 AT),
- 3 Axle Truck (3 AT),
- MAVs (4 to 6 Axles) and Over Sized Vehicles (OSV)

3.1.1 Average Daily Traffic using Apr. to Sept. 2024 Toll Traffic Data

Using the tollable traffic data from April to September 2024, the ADT has bee derived for the four toll plazas and summary is presented in Table 3.1.

Table 3-1: Average Daily Traffic (2024-25)

Veh. Type	TP1	TP2	TP3	TP4
Car/Taxi/LGV	10,004	3,593	4,423	917
LCV/Mini Bus	261	148	170	73
Bus/2AT	1,047	584	589	185
3AT	211	245	201	170

Total PCU	**16,415**	**9,376**	**10,572**	**5,012**

Source: SBHL Toll Traffic Data from Apr. to Sept. 2024,

3.1.2 Comparison of ADT: 2024-25 Vs 2023-24

Comparison of ADT of 2024-25 (Apr. to Sept.) is made with that of previous year and is presented in Table 3.2. The overall traffic has increased for all the three toll plazas, except TP4. The reduction in traffic at TP is due to the traffic diversion towards the recently operational section of Amritsar-Jamnagar expressway (inaugurated in July 2023).

Table 3-2: Average Daily Traffic Comparison (2024-25 and 2023-24)

Veh. Type	TP1		TP2		TP3		TP4	
	2024-25	2023-24	2024-25	2023-24	2024-25	2023-24	2024-25	2023-24
Car/Taxi/LGV	10,004	9,387	3,593	3,533	4,423	4,116	917	1,013
LCV/Mini Bus	261	270	148	158	170	166	73	70
Bus/2AT	1,047	1,013	584	599	589	566	185	264
3AT	211	208	245	234	201	236	170	268
MAV	498	497	682	595	782	662	648	955
OSV	1	1	1	-	1	-	1	1
Total Veh.	**12,022**	**11,376**	**5,253**	**5,119**	**6,166**	**5,746**	**1,994**	**2,571**
Total PCU	**16,415**	**15,696**	**9,376**	**8,947**	**10,572**	**9,750**	**5,012**	**7,016**
Annual variation (Veh.)	**+6%**		**+3%**		**+7%**		**-22%**	

3.1.3 Estimation of Seasonal factors using Toll Traffic Data

The seasonal factors calculated using the monthly toll traffic data for the four TPs. Since the ADT for 2024-25 is derived for the period from Apr. to Sept., the seasonal factors for the same period have been estimated. The factors obtained from the toll data of 2023-24 and 2022-23 are presented in Table 3.3.

Table 3-3: Seasonal Factors (for the Period of Apr. to Sept.) Derived from Toll Traffic Data

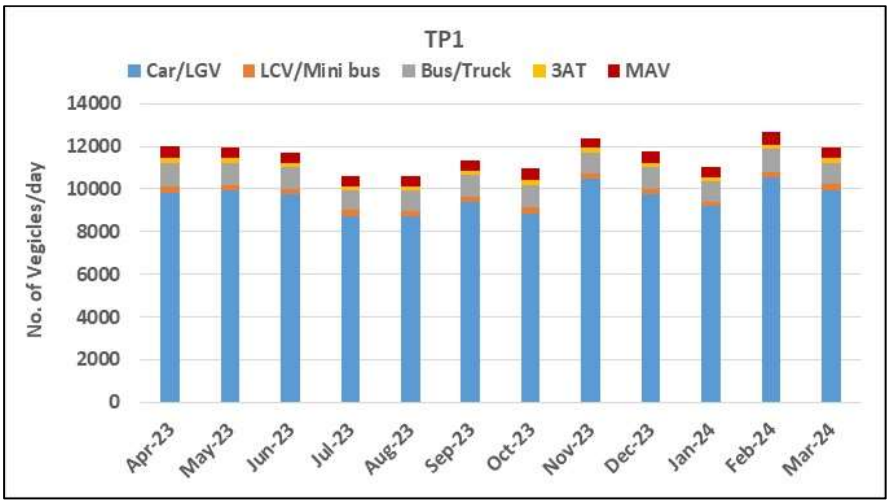
Veh. Type	TP1		TP2		TP3		TP4	
	2023-24	2022-23	2023-24	2022-23	2023-24	2022-23	2023-24	2022-23
Car/Taxi/LGV	1.02	1.02	1.07	1.06	1.05	1.06	1.04	1.06
LCV/Mini Bus	1.00	0.97	1.02	0.99	0.99	1.03	0.99	0.97
Bus/2AT	1.00	1.00	1.01	1.00	1.02	1.00	0.89	1.01
3AT	1.00	0.94	1.02	1.06	0.96	1.04	0.91	1.05
MAV/OSV	1.02	1.02	1.08	1.08	1.05	1.06	0.92	1.05

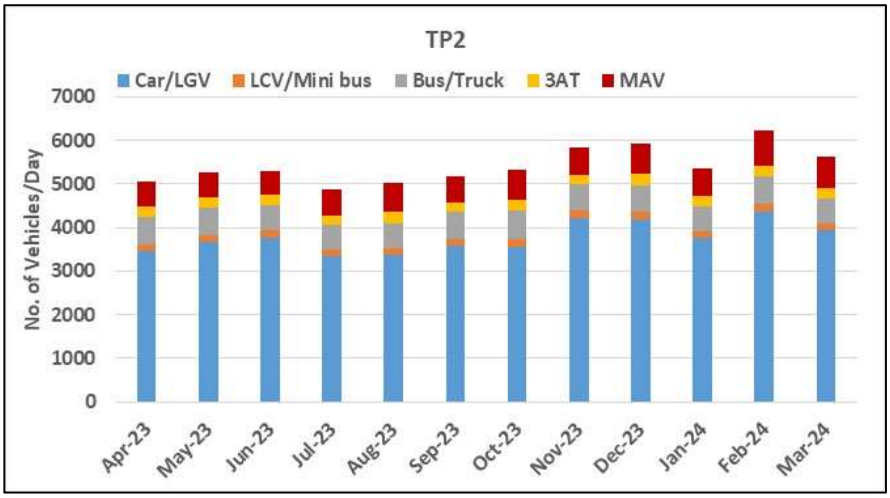
Source: SBHL Toll Traffic Data

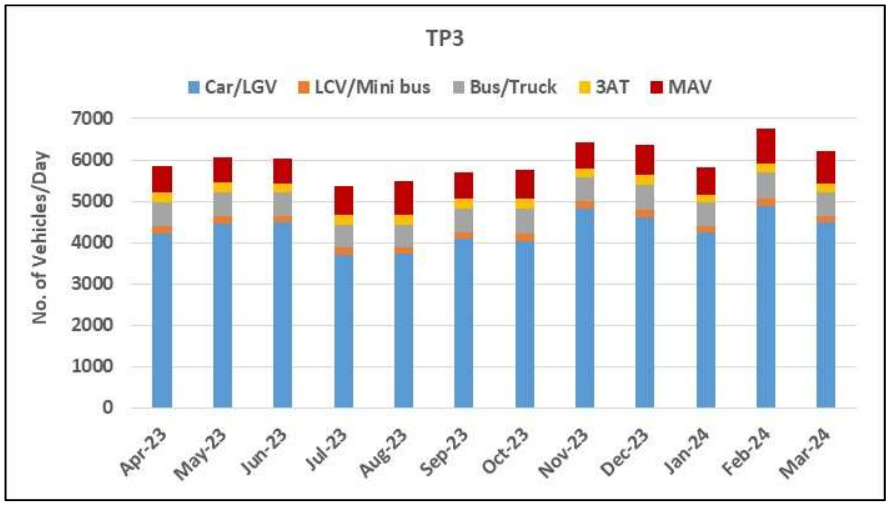
The factors derived for the past two years are found to be almost same for TP1, TP2 and TP3, while there is a difference in the case of TP4.

The monthly variation of toll traffic observed at the four TPs from Apr. '23 to Mar. '24 is presented in Figure 3.1. The first three TPs have normal traffic flow pattern over the months. Traffic is comparatively low during the monsoon period (July and August months) and no substantial variation is observed for the remaining months.

It is observed that the traffic at TP4 has a different monthly pattern, ie'; reduction in traffic is observed from July'23 to March'24. The probable reason for this continuous decrease till March could be the opening of newly constructed Amritsar- Jamnagar expressway section and a share of traffic at TP4 (ie; traffic moving between places north and south of Bikaner) is diverted to the expressway.







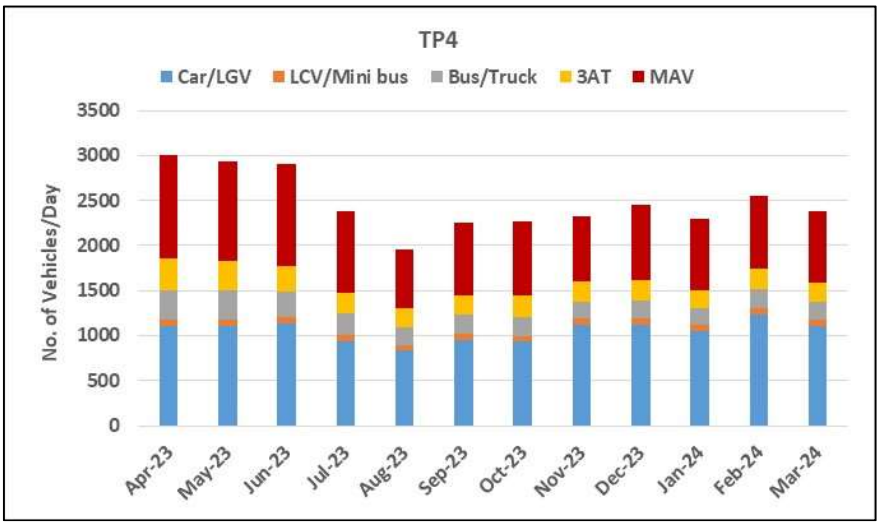


Figure 3-1: Monthly Variation of Toll Traffic on the Project Road (2023-24)

3.1.4 Adopted Seasonal factors for AADT

The factors obtained using 2023-24 traffic details has been recommended for traffic forecast except for TP4 as the traffic flow for TP 4 was not normal for the year. Hence the factors of 2022-23 have been recommended for TP4. The factors adopted for AADT estimation are presented in Table 3.4.

Table 3-4: Seasonal Factors Adopted for the Study

Veh. Category	TP1 *	TP2*	TP3*	TP4 **
Car/Taxi/LGV	1.02	1.07	1.05	1.06
LCV/Mini Bus	1.00	1.02	0.99	0.97
Bus	1.00	1.01	1.02	1.01
2AT	1.00	1.01	1.02	1.01
3AT	1.00	1.02	0.96	1.05
MAV	1.02	1.08	1.05	1.05
OSV	1.02	1.08	1.05	1.05

*- 2023-24 values, **-2022-23 values

3.1.5 Annual Average Daily Traffic (AADT 2024-25)

AADT is obtained by multiplying the ADT (2024-25) with the adopted seasonal factors. The estimated AADT for the TPs are presented in Table 3.5. It is assumed that the diversion effect due to the expressway will get normalized from next year onwards.

Table 3-5: Annual Average Daily Traffic (2024-25)

Veh. Type	TP1	TP2	TP3	TP4
Car/Taxi/LGV	10,217	3,835	4,640	973

*Source: SBHL Toll Traffic Data. *- Monthly traffic data was combined for bus and truck and split was done as per their share obtained from the Fastag traffic data of each toll plaza.*

3.1.6 Toll Exempted Traffic and Trip Categorisation of Tollable Traffic

Toll categorisation has been estimated using toll traffic data of 2023-24 and 2024-25 (Apr. to Sept data). The toll traffic data for the current year is available only for six months and hence not recommended. The toll traffic categorisation obtained from the data of 2023-24 (which represents one full year) is used in the revenue forecast.

The data consists of two general categories, i.e. (1) traffic paying toll (toll paying traffic) and (2) exempted or force exempted. The exempted type includes the exempted traffic as per the toll policy of the project (mainly constitute Govt. Patrol/ Police/Military/ Convoy vehicles/ post, and telegraph vehicles commuting along the road) and local vehicles allowed by the toll operator. The force exempted includes the vehicles which are not willing to pay the toll and the operator is compelled to allow them to pass the toll plazas without paying toll. The share of exempted vehicles observed at the four toll plazas (of the total traffic) are presented in Table 3.6. The forced exempted traffic, mainly car/taxi, is observed more at TP1.

Table 3-6: Share of Exempted Vehicles

	Exempted	Force Exempted	Total Exempted	Exempted	Force Exempted	Total Exempted
	TP1			**TP2**		
Car/Taxi/LGV	8.6%	15.0%	**23.6%**	9.3%	2.2%	**11.5%**
LCV/Mini Bus	7.3%	1.7%	**9.0%**	8.9%	0.0%	**8.9%**
Bus	0.0%	0.0%	**0.0%**	0.0%	0.0%	**0.0%**
2 AT	1.7%	1.2%	**3.0%**	1.9%	0.0%	**1.9%**

3 AT	0.1%	0.0%	**0.1%**	0.2%	0.0%	**0.2%**
MAV	0.2%	0.0%	**0.2%**	0.0%	0.0%	**0.0%**
OSV	0.0%	0.0%	**0.0%**	0.0%	0.0%	**0.0%**

Source: SBHL toll data

The toll paying traffic (after excluding the exempted traffic from the total tollable traffic) is used to derive the categorisation of trips as per the prevailing toll policy (single/return/Local concession for commercial vehicles/monthly pass/ local monthly pass for cars). It is presented in Table 3.7.

Table 3-7: Trip Categorisation for Tollable Traffic

	Single	Return	Local Concession	Local monthly Pass (Cars)	Monthly pass	Total
			TP1			
Car	38.6%	50.7%	2.1%	8.6%	0.0%	100%

3.1.7 Tollable AADT (2024-25)

Table 3.4 provides the tollable/toll paying AADT (2024-25) for the four TPs. It is obtained by excluding the share of exempted vehicles from the total AADT (which is presented in the Table given above).

Table 3-8: AADT of Actually Tollable Vehicles

	AADT (toll paying traffic, which exclude exempted vehicles)			
	TP1	TP2	TP3	TP4
Car/Taxi/LGV	7,801	3,394	4,005	918
Bus	588	328	324	8
LCV/Mini bus	236	137	161	69

3.1.8 Past Traffic Growth Trend

Monthly toll traffic data is available from the year 2015-16 to 2023-24 and is used in the trend analysis. The average daily traffic for all months of active toll operation in the past is considered. The average daily traffic along with the observed annual growth rates are presented in Table 3.9. The annual growth of toll revenue is presented in Table 3.10. The following observations are made from the analysis.

- The overall growth of traffic on the project road is good, which is indicated by the average annual growth of revenue (2015-16 to 2023-24) of 12%. A decline in the growth of revenue/traffic is observed at TP4 during last year is due to the diversion to the expressway.
- Car/taxi/LGV, 2AT/Bus, MAV performed better in the past with average growth of 8%, 4% and 8% per annum respectively. However, LCV/mini bus and 3AT category shown a declining trend.
- It is observed that the growth of traffic on the project road is in a random manner and not continuous over the years, which is not a normal scenario for any highway of similar nature. The reasons for the haphazard growth trend in the past may be due to;

- the development of regional network and other roads in the project road vicinity, which had provided better connectivity and diverted some traffic from the project road during the past
- The performance during the years 2020-21 and 2021-22 were not normal due to the impact of COVID and due to the prolonged farmer's agitation in Rajasthan.

- The major alternate roads of the project stretch vicinity are developed and are operational. The impact on the project road due to these road improvements is minimal and stabilized. Overall growth of traffic during the last two year period is better than the past years and this indicates that the performance of the road is improving in terms of traffic post covid.
- Decline in the traffic of TP4 (Car: -3%, Bus/2AT: -22%, 3AT: -30% and MAV: -20%) is mainly due to the shift of traffic to Amritsar- Jamnagar expressway.

3.2 Analysis of Fuel Sales data

Seasonal factors from Fuel data: Monthly fuel sales data collected from fuel stations along the project road and used (total 3 data sets) for the estimation of seasonal factor.

The seasonal factors estimated from fuel sales is presented in Table 3.11.

Table 3-11: Seasonal factors from fuel sales data

	Petrol				Diesel			
	2021-22	2020-21	2019-20	Average	2021-22	2020-21	2019-20	Average

4 OD SURVEYS & DATA ANALYSIS

4.1 OD Survey Methodology & Locations

Roadside Interview method, as detailed in IRC: 102-1988, is used for conducting O-D survey. The survey was carried out for tollable modes (both passenger and goods vehicles) for two days (in both directions). The information collected includes trip origin, trip destination, commodity details for goods vehicles and purpose and frequency of travel for passenger vehicles, etc. The data analysis is carried out to assess the movement pattern on the project road.

OD surveys were carried out at the four toll plaza locations on the project road. The survey locations along with the schedule are presented in Table 4.1.

Table 4-1: Schedule of Surveys

Survey Photos

Sl. No.	Type of Survey	No of Locations	Location	Schedule
1	OD survey 2days (2X24)	4	Toll plaza 1, (Rashidpura TP)	23/04/2023 & 24/04/2023
			Toll plaza 2, (Tidiyasar TP)	23/04/2023 & 24/04/2023
			Toll plaza 3, (LakhasarTP)	24/04/2023 & 25/04/2023
			Toll plaza 4, (Udairamsar TP on Bikaner bypass	25/04/2023 & 26/04/2023

Data Consistency: OD data have been checked location wise, mode wise and direction wise for the toll plaza location. The following consistency checks were done for data reliability.

- Zone coding was checked with raw data
- Illegal trips are removed from the data

4.2 Zoning System

Suitable zoning system has been developed for the study purpose. The places falling within 20 Km radius of the toll plaza locations are divided into minor zones to estimate the local traffic occurring at each toll plaza. Large zones were considered for areas outside the project road. The zoning system developed for the study is listed and presented in Table 4.2.

Table 4-2: Zone list for the study

Sr. No.	Zone	Remarks
1	Rashidpura , Bhadhadar, Kordoli, Kuhri bari, Palthana, Pratappura, Sanwaloda, Ghassu, Jasrasar, Mailasi,Jhigar Choti, Palthana, Jheegar Badi	Sikar district

4.3 Sample Size

The sample size covered in OD survey for various types of vehicles is given in Table 4.3.

Table 4-3: Sample Size

Vehicle Type	TP1 (Rasidpura TP)	TP2 (Tidiyasar TP)	TP3 (Lakhasar TP)	TP4 (Udairamsar TP)
Car/Taxi/LGV	29%	40%	38%	42%
LCV/Mini Bus	56%	71%	70%	69%
Bus	88%	88%	50%	23%
2 AT	37%	68%	92%	56%
3 A T	52%	66%	63%	52%
MAV	59%	72%	67%	47%

4.4 Influence Factors

The influence factors (the share of the origin or destination of the trip) indicates the importance of the area or region influencing traffic on the project road. It is estimated as given below:

$$IF = [(P_i + A_i) \times 100] / (\sum(P_i + A_i))$$

Where, *IF* = Influence Factor

P_i = Total trips produced in Zone *i*

A_i = Total trips attracted in Zone *i*

Influence factors obtained from the OD data are presented in Table 4.4 to Table 4.7 for TP1, TP2, TP3 and TP4 respectively.

Rajasthan has the highest influence on traffic on the project road. Other states (especially for goods traffic) such as Punjab and Haryana influence at TP1, TP2 and TP3. Gujarat and Maharashtra influence the traffic at TP4.

Among the districts of Rajasthan, Bikaner, Churu and Sikar districts (the districts through which the project road passes), Jaipur, etc. have more share at TP1, TP2 and TP3. Influence of Bikaner, Sri Ganaganagar, Jodhpur, Nagaur, etc. are the districts of traffic influence for TP4.

Table 4-4: Influence Factors at TP1

	Car/Taxi	Mini Bus	Bus	Mini LCV	LCV	2 AT	3AT	MAV

4.5 Trip Distribution

The distribution of trips observed on the project road is presented in Table 4.8 for the four TPs. Passenger as well as goods vehicles are mainly bound within Rajasthan. Trucks are also travelling between Rajasthan and areas north of Rajasthan.

Table 4-8: Trip Distribution

	Car/Taxi	Bus	LCV	2 AT	3AT	MAV
TP1						
Within Rajasthan	87.8%	93.8%	72.0%	83.8%	77.4%	63.8%
Rajasthan-Areas north of Rajasthan	11.0%	5.2%	27.3%	13.6%	20.3%	30.8%
Rajasthan- Areas south of Rajasthan	0.8%	0.7%	0.4%	1.6%	0.8%	2.5%
Rajasthan- Areas east of Rajasthan	0.1%	0.0%	0.0%	0.6%	1.1%	1.6%
Areas east of Rajasthan - Areas south of Rajasthan	0.3%	0.3%	0.4%	0.5%	0.4%	1.4%
TP2

4.6 Commodity Movement

Commodity movement along the project road was obtained from the OD surveys. The major commodities transporting through the project road are presented in Table 4.11 to Table 4.14 respectively for the four TPs. Important commodities include general items such as vegetables/fruits, food grains, petroleum Products, courier/parcels, etc.

Table 4-11: Commodity- wise Goods Movement Pattern at TP1

5 UPCOMING ROAD PROJECTS & IMPACT ASSESSMENT

The important projects that are proposed/will be implemented in the project area include;

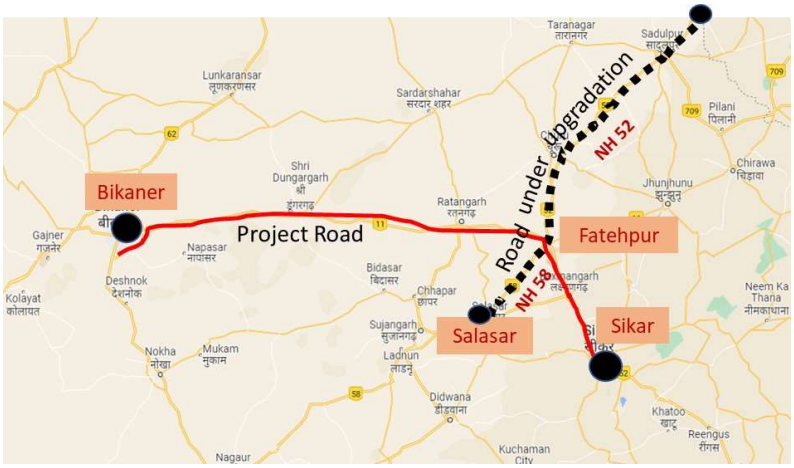
- Four laning of NH52/NH58 from Rajasthan/Haryana border to Salasar and
- Expressways proposed through Rajasthan

The impact of the above projects is presented below.

5.1 Road Projects and the impact

5.1.1 Four laning of NH52/NH58 from Rajasthan/Haryana border to Salasar

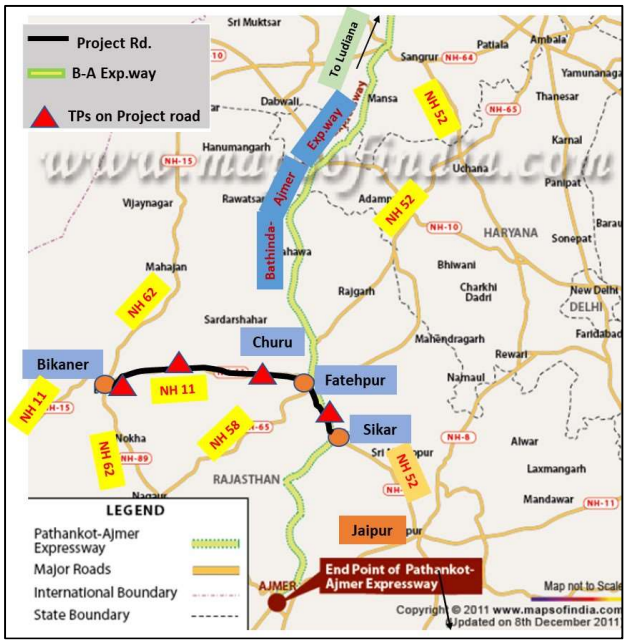
The 155 km long NH52/58 section is undergoing upgradation to four lanes. The stretch was converted to two lane standards by NHAI in 2017 under BoT (toll). The stretch of NH 52 (up to Fatehpur from Rajasthan border) is a feeder route for the project road for the traffic to/from Haryana/Punjab towards Sikar/Jaipur/Gujarat/Maharashtra side and Bikaner side and four laning of NH 52 will be advantageous for the project road. However, the section NH 58 (ie; new link constructed between Salasar and Fatehpur during two laning of NH52/58) which could have adversely affected the project road traffic by diverting the traffic between Haryana/Punjab and West Rajasthan / Gujarat / Maharashtra from the project road. Due to this, the traffic between Haryana/Punjab and West Rajasthan / Gujarat / Maharashtra on the project road is presently very minimal. The four laning of this alternate will provide a better facility for the above traffic to continue to use NH 58 instead of the project road. And hence no major impact due to the road widening is expected on the project road.



5.2 Proposed Expressway Projects in Rajasthan and its Impact

5.2.1 Proposed Bathinda- Ajmer Expressway

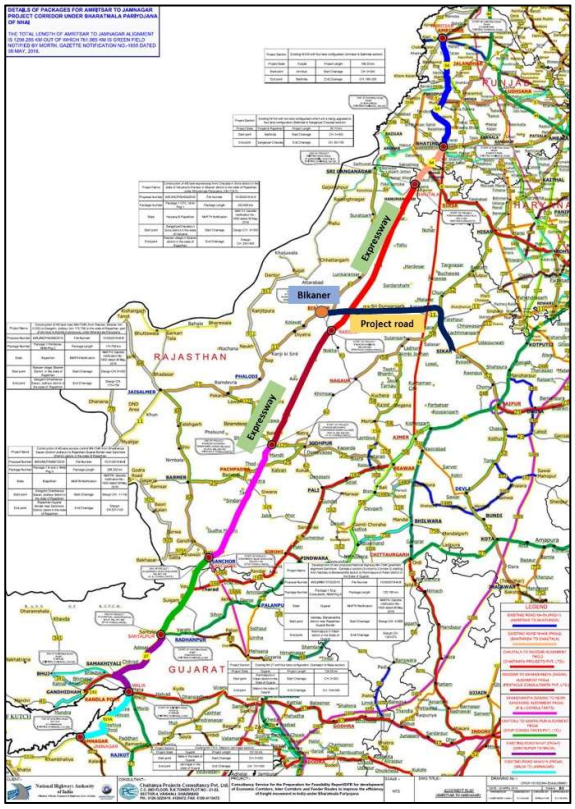
''Bhatinda-Ajmer Expressway (B-A Expressway) is one of the three segments of the "Pathankot-Ludhiana–Ajmer Economic Corridor (EC-8 under Bharatmala project)". This B-A expressway segment was approved by NHAI in May 2018 as a standalone greenfield/brownfield project, which is expected to reduce the existing distance between Bhatinda and Ajmer by 120 km. It is 6-lane (extendable to 8-lanes) access-controlled expressway and expected to be advantageous to the districts of Hanumangarh, Churu, Sikar, Nagaur, Ajmer in Rajasthan.



The expressway would cater to the traffic bound between western area of Punjab and south/west Rajasthan and Gujarat. The major routes presently available are Route 1 via; Hisar, Fatehpur and Salasar (NH 52/NH58) and Route 2, via; Hanumangarh and Ratangarh (NH 54/SH7). Since these two routes are not passing along the project road, no major impact is anticipated on the road traffic after the development of the expressway.

5.2.2 Proposed Amritsar- Jamnagar Expressway

Amritsar – Jamnagar Economic Corridor (Sangaria- Sanchore- Santhalpur Green Field Expressway) is also known as Amritsar – Jamnagar Expressway (A-J Expressway), is about 1,300 km long and is under construction by NHAI. It is proposed as a 4-6 lane partially access-controlled highway traversing through Punjab, Haryana, Rajasthan and Gujarat.



The expressway route is proposed along the western parts of Punjab, Haryana, Rajasthan and Gujarat. In Rajasthan, it will pass through the Sangaria town (in Hanumangarh district), Bikaner district, Jodhpur district and Barmer district, and exit Rajasthan at Sanchore town (in Jalore district). This Expressway is expected to meet the Pathankot-Ludhiana-Bathinda-Ajmer expressway near Bathinda.

About 900 km of its alignment is greenfield and the construction work started in 2019 with a construction period of 2 years. The section of the expressway in Rajasthan from Jakhrawali in Hanumangarh district to Khetlawas in Jalore district was completed in July 2023 and is partially operational. NHAI has revised its completion schedule for the project to Dec. 2025.

From the traffic O-D point of view, the project road mainly cater to the traffic within Rajasthan and the inter-state traffic is very less. Hence no major impact expected due to the above economic corridor and the Rajasthan bound traffic will continue to use the project road in the future even after the development of the expressway. The expressway runs in north-south direction through western Rajasthan (near Bikaner). Hence, it can impact the north-south traffic plying through TP4.

Impact of the Expressway on TP4 Traffic: The project road section comprising TP4 includes traffic plying between places north and south of Bikaner, which is observed as 2AT: 24%, 3AT: 36% and MAV: 37% (as per the OD data analysis). The 2024-25 traffic data of TP4 (Apr. to Sept.) shown a decline (overall traffic decreased by 23%) over the last year and the decrease is primarily due to the diversion towards the expressway.

Hence, a diversion analysis is performed for the north-south traffic at TP4 based on the information/details of the expressway in the public domain.

Route comparison is made between Hanumangarh and Sanchore as the north-south traffic on TP4 is mainly bound within Rajasthan.

Route Comparison	Length (Km) between (Hanumangarh and Sanchore
Existing route	800 km (NH 62)
Proposed Route	700 km (Expressway)

Travel Cost Estimation:

- Vehicle Operating Cost (VoC) and Travel Time Cost (VoT) per trip for the existing road and the Expressways as per the values specified in IRC SP 30: 2019 (Manual for Economic Analysis of Highways in India) is escalated for 2024 by adopting an annual growth of @5% per annum

- Toll amount calculation for existing NH is based on per km rate of existing toll of project road and the prevailing toll rate of the operational section of Delhi- Mumbai Expressway *(as no specific details available for the proposed expressway).*

Travel cost comparison for the two routes is presented in Table 5.1.

Table 5-1: Travel cost/trip comparison of Proposed Amritsar-Jamnagar Expressway

	Existing route (INR.)				Proposed Expressway (INR)			
	VOC	VOT	Toll	Total	VOC	VOT	Toll	Total
2 AT/3AT	33,250	1,724	3,870	38,843	27,405	754	5,624	33,784
MAV	48,480	2,715	6,081	57,276	39,935	1,188	8,085	49,208

Diversion Estimation: Diversion % calculated based on the diversion curve equations given in IRC 108-2015: Traffic forecast on Highways and the estimated diversion is presented in Table 5.2.

Table 5-2: Estimated Diversion Percentage to the Proposed Amritsar-Jamnagar Expressway

Veh.	Cost Ratio (Proposed/ existing)	% Diversion
2 AT/3AT	0.87	73
MAV	0.86	75

Note: These diversion % are based on the assumptions discussed above

Based on the above analysis, the expected traffic diversion from the project road due the expressway is given in Table 5.3.

Table 5-3: Estimated Traffic Diversion from TP 4 to Amritsar- Jamnagar Expressway

	TP4		
	2 AT	3AT	MAV

Candidate Traffic %	24.0%	36.0%	37.0%
Diversion %	73%	73%	75%
Traffic Diversion %	**18%**	**26%**	**28%**

The above analysis indicates the probable north-south traffic from TP4 has shifted to the expressway and hence it is concluded that no additional diversion is expected from TP4 due to the expressway.

5.2.3 Delhi- Mumbai Expressway

The Delhi–Mumbai Expressway is partially operational between Sohna and Dausa and other sections are under various stages of development.

The expressway alignment passes through the southern districts of Rajasthan (Dausa, Sawai Madhopur, Kota, etc.), which is about 250 km away from the project road (refer Figure presented here).

The interstate traffic that the project road carries is between Punjab/Haryana and Rajasthan and that too its share is very less and hence the Delhi-Mumbai expressway is not a competing route to the project road.

5.2.4 Conclusion

The expressways are in various stages of development. Based on the available details of the expressways, traffic pattern on the project road and our judgement, these expressways are not competitive to the project road traffic. Hence, no major impact is anticipated from these expressways, except the Amritsar- Jamnagar expressway. It is an alternate to the north-south bound traffic of TP4 and this traffic has diverted to the operational section of the expressway and no additional diversion is expected in the future.

6 GROWTH RATE ESTIMATION & TRAFFIC PROJECTION

6.1 Background

Projection of traffic along the project stretch for the horizon period requires an understanding of the key drivers to the traffic. These include demographic variables such as population, per-capita income and economic variables such as GDP/NSDP for project influence region. Projection of these drivers needs to be developed within a framework that ensures internal consistency.

Broad review of the socio-economic characteristics of the state that influences the traffic (Rajasthan) on the project road is discussed in Chapter 2. The growth trends for these socio-economic variables and assessment of traffic growth rates and forecasts that is necessary for the revenue estimation is detailed in this Chapter.

6.2 Traffic Growth Trend in the Past

The project road is operational from 2015-16 and the traffic growth trend observed in the past is presented in Chapter 3. Generally, the growth of traffic on the project road was moderate during the period between 2015-16 and 2022-23, though there were variations over the years. Car/taxi/LGV, 2AT/Bus and MAV had growth in the past and LCV/mini bus and 3AT category has a declining/no growth trend in the past.

The three road segments have almost same growth pattern in the past (refer Table 6.1 for the average growth trend for the past five years).

Table 6-1: Growth trend in the Past five years

Average Annual Growth Rate (2018-19 to 2022-23)							
	Traffic						Toll Revenue
	Car/Taxi/ LGV	LCV/Mini Bus	Bus/ 2AT	3 AT	MAV	Total	
TP1	5.5%	-9.4%	7.6%	-3.9%	1.3%	3.8%	7.3%
TP2	7.2%	-6.8%	4.4%	-0.4%	11.7%	5.7%	11.9%
TP3	7.9%	6.3%	2.9%	-4.7%	10.4%	6.0%	11.7%
TP4	14.2%	-4.0%	14.7%	-6.1%	10.1%	7.8%	12.6%
All the four TP's together	**6.6%**	**-5.0%**	**5.9%**	**-5.0%**	**7.7%**	**4.9%**	**9.5%**

The development of alternate roads in the vicinity and issues such as statewide strike by the farmers, the covid pandemic, etc. had affected the traffic growth unfavorably. The trend in the last two years indicates that the traffic on the road is out of these adverse impacts and hence a stabilized and better growth in the future can be expected in the future.

6.3 Growth Rate Estimation

Traffic growth rates to be used for forecasting toll traffic on the project road is estimated by adopting the Elasticity of Transport Demand method which is the most commonly adopted technique for traffic forecast on highways in India. This method establishes the relationship between traffic growth trend on the corridor / vehicle registration of the influencing states, with the state income (NSDP), population and per capita income (PCI) of the project road influencing states.

The steps involved in growth rate estimation are as follows:

- Identifying the Project influence area (PIA) for the project road from OD data, this has impact on the traffic growth of project road.
- Analyze the past socio-economic performance of the project influence area and assess the economic growth rates of influence area in the future.
- Estimating the base elasticity of traffic growth which provides the relationship between the traffic growth and the socio-economic growth of the influence area
- Projection of future elasticity for various modes from the base elasticity
- Estimating the traffic growth based on the future elasticity values and the respective socio-economic growth perspective of the traffic influencing regions

Rajasthan is the state having the highest influence in contributing traffic to the project corridor. Minor influence of states of Haryana, Punjab, Gujarat and Maharashtra are also observed on the project road. The influence is given in Table 6.2. All the three segments would have same travel pattern, and a single growth rate is proposed for the project road.

Table 6-2: Major Traffic Influencing Region

	Car/Taxi/ LGV	LCV/Mini Bus	Bus/2AT	3 AT	MAV
Rajasthan	97.4%	91.7%	94.0%	89.9%	84.7%
Haryana	0.9%	3.2%	1.6%	2.6%	4.8%
Punjab	0.5%	1.9%	1.4%	3.0%	3.6%
Gujarat	0.5%	0.9%	0.7%	1.5%	2.0%
Maharashtra	0.1%	0.3%	0.5%	1.0%	1.3%
Total	**99.4%**	**98.1%**	**98.2%**	**97.9%**	**96.5%**

6.3.1 Economic profile of Major Traffic Influencing Areas/States

The trend of economic growth of Rajasthan and other influencing states are summarised in Table 6.3 and in Table 6.4. Rajasthan's economy had a moderate growth in the past when compared to other influencing states/GDP. The average annual growth rates of NSDP/GDP for the period 2015-16 to 2020-21 is low due to the COVID impact in the year 2020-21.

Table 6-3: NSDP Growth Trend

	Rajasthan	Haryana	Punjab	Gujarat	Maharashtra	India
2015-16	5,01,922	3,72,700	2,94,895	7,74,775	14,52,513	1,13,69,493

6.3.2 Estimation of Base Elasticity & Projection

Elasticity is derived by developing econometric models through regressing NSDP with past traffic data for the years between 2015 and 2020 (NSDP available only up to 2020-21 for all states). Elasticity value of 2AT/Bus is not accepted due to very low goodness of fit (less R^2 values). It may be due to the haphazard growth of traffic during the analysis period. The derived elasticity values are provided in Table 6.5. Negative elasticity value is observed for 3 AT due to their declining trend.

Table 6-5: Estimated Elasticity Values

	Elasticity	R^2
2 AT/Bus	0.01	0.00
3 AT	-2.37	0.86
MAV	1.65	0.84
LCV/Mini Bus	1.15	0.54
Car/Taxi/LGV	1.61	0.95

The following time periods, till the end of concession period (30-year concession period, including the expected extension of five more years, from 2013-14).

- Base period adopted: 2015-16 to 2020-21,
- 2021-22 to 2025-26
- 2026-27 to 2030-31
- 2031-32 to 2035-36
- Beyond 2035-36

Elasticities are projected based on the above values and their growth perspective in the future.

Generally, the spread of economic development induces changes in the spatial distribution of activities and corresponding changes in transport demand elasticity. Accordingly, the elasticity, for both freight and passenger traffic would tend to decline over time, despite growth in economic parameters. Future modal shift, new vehicle technologies, etc. also will affect transport demand elasticity in the future. Hence it is necessary to moderate the elasticity and to arrive at the growth rates within realistic limits for the future years, by making reasonable assumptions on the various influencing parameters of growth.

It is assumed that 2/3 axle trucks and bus will have nominal growth in the future and elasticity is adopted accordingly. The adopted values and the projection are given in Table 6.6.

Table 6-6: Adopted Elasticity & Projections

Vehicle Type	Period (2015-16 to 2020-21)	Period (2021-22 to 2025-26)	Period (2026-27 to 2030-31)	Period (2031-32 to 2035-36)	Period (> 2035-36)
2 axle Truck	-	0.40*	0.32	0.26	0.20
3 axle Truck	-	0.20*	0.16	0.13	0.10
MAV	1.65	1.32	1.05	0.84	0.67
LCV/Mini Bus	1.15	0.92	0.73	0.59	0.47
Car/Taxi/LGV	1.61	1.29	1.03	0.83	0.66
Bus	-	0.65*	0.52	0.41	0.33

**- Assumed values*

6.3.3 Projection of Socioeconomic Variable

The socio-economic variable projections (weighted NSDP for all modes) were made based on the past performance of the influencing areas and the recent economic changes post COVID.

Due to the absence of realistic data on the future economy of the influencing states, methodology adopted is to forecast the socioeconomic growth (NSDP) of the influencing states by relating with GDP growth forecast. For this, a factor was derived considering the annual growth of GDP for the base period (2015-16 to 2020-21) and every five-year period in the future (Refer Table 7.7). This factor was multiplied with the base period combined NSDP growth rate for each vehicle type, resulting in the future growth rate of NSDP of the influence region for the subsequent time periods.

Impact of COVID in Indian Economy: The base period of growth rate analysis is 2015-16 to 2020-21. This includes the period of first wave of COVID (year 2020-21), which had a lower growth rate of

economy. The GDP growth from 2021-22 onwards will capture the regain of economy post COVID. The published GDP growth for 2021-22 is adopted and for the year 2022-23 and 2023-24 , the GDP figures are based on the latest update from govt. authorities/multilateral agencies are employed in the analysis. These figures will reflect the economic growth after the COVID period.

The GDP of India had expanded 8.7% in 2021-22 after a decline (-ve growth) of 6.6% in the previous year (due to COVID impact). As per the latest update by RBI, the overall growth of India's economy during 2022-23 recorded a growth of 7.2%. The economic survey, by Ministry of Finance, Govt. of India, projects a GDP growth of 6.5 per cent in 2023-24. It is assumed that India's growth continues to be resilient in the future and growth rates assumed accordingly. Based on the above predictions /assumptions, the GDP forecast is made and is given below in Table 6.7.

Table 6-7: Projected Growth of GDP and the Relating Factor

Period	Average Annual GR %	GDP factor for the future five-year periods w.r.t the base Period of (2015-16 to 2020-21)
2015-16 to 2020-21*	3.7%	-
2021-22*	8.7%	188%
2022-23**	6.9%	
2023-24**	6.5%	
2024-25**	6.5%	
2025-26**	6.5%	
2026-27 to 2030-31**	6.0%	161%
2031-32 to 2035-36**	5.5%	147%
>2035-36**	5.0%	134%

*Note: *-Actual values, Source: RBI, World Bank, ** Predictions/Assumptions*

Based on the above, the socioeconomic variables have been projected for the influencing areas and are presented in Table 6.8.

Table 6-8: Projection of Socio-economic variable

Vehicle Type	Period (2015-16 to 2020-21)	Period (2021-22 to 2025-26)*	Period (2026-27 to 2030-31)	Period (2031- 32 to 2035-36)	Period (> 2035-36)
2 axle Truck	3.1%	5.9%	5.1%	4.6%	4.2%
3 axle Truck	3.2%	6.0%	5.2%	4.7%	4.7%
MAV	3.3%	6.2%	5.3%	4.8%	4.8%
LCV/Mini Bus	3.2%	6.0%	5.1%	4.7%	4.7%
Car/Taxi/LGV	3.1%	5.9%	5.0%	4.6%	4.6%
Bus	3.1%	5.9%	5.1%	4.6%	4.6%

*Note: *- Start year for traffic projection (2024)*

6.3.4 Recommended Growth Rates

The projected elasticity and the corresponding socio-economic sector projection has been multiplied to estimate the growth rates for different horizon periods using the relationship given below.

Tgr = (NSDPgr) x E

Where, Tgr – Traffic growth rate for mode

NSDPgr – growth rate of NSDP, E – Elasticity value for mode

The estimated growth-rates for various modes are presented below in Table 6.9. This growth rates are recommended for the project.

Table 6-9: Recommended Growth Rates

Vehicle Type	2025-26	Period (2026-27 to 2030-31)	Period (2031- 32 to 2035-36)	Period (> 2035-36)
2 axle Truck	2.4%	2.0%	1.5%	1.1%
3 axle Truck	1.2%	1.0%	0.8%	0.6%
MAV	8.1%	7.0%	5.1%	4.1%
LCV/Mini Bus	5.5%	4.7%	3.5%	2.8%
Car/Taxi/LGV	7.6%	6.5%	4.7%	3.8%
Bus	3.8%	3.3%	2.4%	1.9%

6.3.5 Growth rates under Optimistic and Pessimistic Scenarios

Growth rates under Optimistic scenario assumes an additional one percent per annum higher growth of GDP than in Normal scenario, while pessimistic scenario consider a decline of GDP growth @ 1% per annum in the future years. The growth rates predicted under these two scenarios are given below in Table 6.10 and in Table 6.11.

Table 6-10: Growth Rates under Optimistic Scenario

Vehicle Type	2025-26	Period (2026-27 to 2030-31)	Period (2031- 32 to 2035-36)	Period (> 2035-36)
2 axle Truck	2.6%	2.4%	1.8%	1.3%
3 axle Truck	1.3%	1.2%	0.9%	0.7%
MAV	8.8%	8.1%	6.0%	4.8%
LCV/Mini Bus	6.0%	5.5%	4.1%	3.3%
Car/Taxi/LGV	8.2%	7.5%	5.6%	4.5%
Bus	4.1%	3.8%	2.8%	2.3%

Table 6-11: Growth Rates under Pessimistic Scenario

Vehicle Type	2025-26	Period (2026-27 to 2030-31)	Period (2031- 32 to 2035-36)	Period (> 2035-36)
2 axle Truck	2.2%	1.7%	1.2%	0.9%
3 axle Truck	1.1%	0.9%	0.6%	0.5%
MAV	7.4%	5.8%	4.2%	3.3%
LCV/Mini Bus	5.0%	3.9%	2.8%	2.3%
Car/Taxi/LGV	6.9%	5.4%	3.9%	3.1%
Bus	3.5%	2.7%	2.0%	1.6%

6.4 Traffic Projection

The base year tollable AADT (including exempted vehicles) has been projected according to the recommended growth rates for the remaining concession period. Traffic projection is presented in

Table 6.12 to Table 6.14 for the three scenarios. Based on Effect of Variations in Traffic Growth, an increase of concession period from 25 years to 30 years is expected and hence considered in the traffic projection (made upto 2043-44).

Table 6-12: Projected Tollable AADT (Normal Scenario)

	Car/Taxi /LGV	Bus	LCV/ Mini bus	2 Axle Truck	3 Axle Truck	MAV	OSV	Tot Veh.	Tot. PCU	Car/Taxi /LGV	Bus	LCV /Mini bus	2 Axle Truck	3 Axle Truck	MAV	OSV	Tot Veh.	Tot. PCU

7 TOLL REVENUE FORECAST

Toll revenue is projected for the remaining years of concession period based on the current AADT and recommended growth rates. Toll/User fee is projected for the future years as per the provisions of the Concession Agreement.

7.1 Input for Revenue Estimation

7.1.1 Base Year Tollable AADT (2024-25)

The AADT of tollable vehicles for the base year (2024-25) at the toll plaza locations is shown in Table 5.1. This AADT excludes the exempted vehicles presented in Section 3.1.3.

Table 7-1: Base Year Tollable AADT (2024-25)

	TP1 (Rasidpura TP)	TP2 (Tidiyasar TP)	TP3 (Lakhasar TP)	TP4 (Udairamsar TP)
Car/Taxi/LGV	7,801	3,394	4,006	918
Bus	588	328	324	8
LCV/Mini Bus	237	138	162	70
2AT	447	257	274	177
3AT	210	249	193	179
MAV	501	738	823	681
OSV	1	1	1	1
Total Veh.	**9,786**	**5,104**	**5,782**	**2,034**
Total PCU	**14,154**	**9,427**	**10,326**	**5,182**

Note: Toll paying traffic, which excludes the toll exempted vehicles,

7.1.2 Toll Policy

As per Schedule R of Concession agreement, the toll rates for computation of toll revenues to be adopted from the National Highways Fee (Determination of rates and collection) Rules, 2008, along with amendment rules of 2010 and 2011. Various trip categories are described below:

- **Single Entry:** Mechanical vehicle who makes use of the section of National Highway, permanent bridge, bypass or tunnel for one way journey once in 24 hrs.
- **Return trip:** Driver or person who is in charge of a mechanical vehicle who makes use of the section of National Highway, permanent bridge, bypass or tunnel for two one-way journeys within a 24 hrs. (from the time of payment) may opt for the return pass.
- **Local monthly pass (for cars):** Person who owns mechanical vehicle, registered for non-commercial purpose and resides within a distance of 20 Km from the toll plaza location is eligible for the local pass.
- **Local concession for commercial vehicles:** As per the revised toll notification, commercial vehicles registered within the district in which the toll plaza is located (excluding National Permit) are eligible for local concession, fee is 50% of single trip fee.

- **Monthly pass:** Driver, Owner or person who is in charge of a mechanical vehicle who makes use of the toll section frequently during a month, may opt to purchase a monthly pass. Monthly pass amount is fixed as two-third of the fee for 50 single journeys in a period of one month.

7.1.3 Toll Ticket/Trip Categorisation

As per Schedule R of Concession agreement, the toll rates for computation of toll revenues to be adopted from the National Highways Fee (Determination of rates and collection) Rules, 2008, along with amendment rules of 2010 and 2011 are relevant to toll fee. Trip categorization is estimated from the toll traffic (2023-24) and is adopted in the study (refer Table 7. 2).

Table 7-2: Trip categorization as per NHAI Toll Policy

	Single	Return	Local Concession	Local monthly Pass (Cars)	Monthly pass	Total

7.1.4 Growth Rates

Summary of recommended growth rates are given in Table 7.3.

Table 7-3: Recommended Growth Rates

Vehicle Type	2025-26	Period (2026-27 to 2030-31)	Period (2031- 32 to 2035-36)	Period (> 2035-36)
2 axle Truck	2.4%	2.0%	1.5%	1.1%
3 axle Truck	1.2%	1.0%	0.8%	0.6%
MAV	8.1%	7.0%	5.1%	4.1%
LCV/Mini Bus	5.5%	4.7%	3.5%	2.8%
Car/Taxi/LGV	7.6%	6.5%	4.7%	3.8%
Bus	3.8%	3.3%	2.4%	1.9%

7.1.5 Toll Fee Rates

As per Schedule R of SBHL, the Concessionaire was authorised to collect the fees from the users of the project highway from the date of Commercial Operations of the Project Highway pursuant to the National Highways Fee (Determination of Rates and Collection) Rules, 2008, along with the amendment rules 2010 & 2011. The applicable toll rates are:

- **Base rate of fee for highway with four lane or more lanes:** The rate of fee for use of a section of national highway of four or more lanes shall, for the base year 2007-2008 be the product of the length of such section multiplied by the following rates namely:

Type of Vehicle	Base Rate of fee per km (in rupees) (2007-08 rate)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Mini Bus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Trucks	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (four to six axles)	3.45
Oversized vehicles (seven or more axles)	4.20

- Rate for two lane highway: The rate of fee for a two-lane section of the national highway, on which an average investment for upgradation has exceeded Rs. 1.0 crores/km (applicable to the two -lane section of the project road) shall be 60% of the above rate.
- The rate of fee for using a bypass forming part of the national highway, constructed with a cost above Rs. 10 crores or above, for the base year of 2007-08 shall be one and half times the rate of the fee mentioned above.

These rates are applicable for one-way (single) journey.

- **Daily/Return Pass & Monthly Pass Rate:**

Amount Payable	Maximum number of one way journeys allowed	Period of Validity
One and half times of the fee for one way journey	Two	Twenty four hours from the time of payment
Two-third of amount of the fee payable for fifty single journeys	Fifty	One month from date of payment

- **Monthly pass for Local Car Traffic:** The monthly fee for local car traffic (residing within 20 km radius of the toll plaza), at the base rate for the year 2007-2008 is of rupees One hundred and Fifty per calendar month.
- **Concession for Commercial Vehicles**: Fee for commercial vehicles (excluding vehicles plying under National Permit) registered in the district where the toll plaza falls will be 50% of the prescribed rate for the vehicle category

The toll amount, by multiplying the above rates with the control length/tollable length of the toll plaza shall be rounded to the nearest five rupees.

7.1.6 Toll Plaza Control lengths

The tollable length/control lengths of the toll plazas as per the Schedule R of the project are presented in Table 7.4.

Table 7-4: Toll Plaza Control Length

Length of Tolling (Km)	TP1	TP2	TP3	TP4
Length of Tolling (4Lane)	17.78	0	0	0
Length of Tolling (2Lane)	36.757	69.5	73.338	0
Bypass Length (2 Lane)	19.463*	3.5**	0	17.24***
Total	**74.000**	**73.000**	**73.338**	**17.240**

*Source: Schedule R, Note: Cost: *Sikar bypass- Rs. 25.34 crores, **Realignment-Rs.20.07 crores, ***Bikaner bypass-Rs. 50.12 crores*

7.1.7 Annual Toll Revision

Annual Revision of rate of fee: The 2007-08 toll rates have been increased without compounding by three per cent each year with effect from the 1st day of April 2008 and such increased rate has been deemed to be the base rate for the subsequent years.

The applicable base rates have been revised annually with effect from April 1st, each year to reflect the increase in wholesale price index between the week ending on January 6, 2007 and the week ending on or immediately after January 1 of the year in which sub revision is undertaken but such revision shall be restricted for forty percent of the increase in wholesale price index. The past WPI

values has been adopted from Source: http://eaindustry.nic.in/default.htm/ Ministry of Commerce and Industry, Govt. of India. The formula for determining the applicable rate of fee is as follows:

$$\text{Applicable rate of fee} = \text{Base rate} + \text{base rate} \times \left\{ \frac{\text{WPIA} - \text{WPIB}}{\text{WPIB}} \right\} \times 0.4$$

The annual fluctuation of WPI in the past (refer Table given below). As per the annual growth of WPI, it is grown at an average rate of 4.9% per annum. A similar trend is considered for the future also. However, actual WPI growth observed in last three to four years data in some year muted and in some years in double digits growth. Hence, a value of 3.5% is adopted for 2025-26, 6.5% for the next three years and thereafter 5.0%.

Year	WPI Actual Index (2004-05 series)	Annual Fluctuation %
2007	112.2	-
2008	116.7	4.0
2009	124.5	6.7
2010	133.4	7.1
2011	146.0	9.4
2012	157.3	7.7
2013	168.6	7.2
2014	179.6	6.5
2015	178.7	-0.5
2016	176.8	-1.1
2017	183.3	3.7
2018	189.9	3.6
2019	196.4	3.4
2020	201.8	2.8
2021	205.8	2.0
2022	235.2	14.3
2023-24	247.0	5.02
2024-25	249.1	0.86
Average GR/Annum		**4.9**

Source: http://eaindustry.nic.in/linking_factor0405.asp,

Based on the above, the toll fee has been calculated for various type of toll category till the end of concession period. The present toll amount applicable for Apr. 2024 to Mar. 2025 (with effect from 01.04.2024) at the toll plazas are presented in Table 7.5.

Table 7-5: Toll amount in Rs. (Apr. 2024 – Mar. 2025)

Category of Vehicles	Fee for Single Journey	Fee for Return Journey within a day	Fee for Monthly Pass for 50 single journeys in a month	Fee for single journey for the commercial vehicles registered within the district of fee plaza

Bus or Truck (Two Axles)	75	115	2,565	40
Three-axle commercial vehicles	85	125	2,800	40
HCM or EME or MAV (four to six)	120	180	4,025	60

Category of Vehicles	Fee for Single Journey	Fee for Return Journey within a day	Fee for Monthly Pass for 50 single journeys in a month	Fee for single journey for the commercial vehicles registered within the district of fee plaza
Oversized Vehicles (Seven or more axles)	145	220	4,900	75

Note: The rates for monthly pass applicable for local cars (personal non-commercial vehicles (cars) residing with in a distance of 20 Km from the toll plaza) is Rs.340/-

7.2 Annual Toll Revenue

The annual toll revenue is computed assuming toll collection for 365 days in a year. As per SBHL's letter no. SBHL/PRJ/TEC/ICO-581/3319, dated June 21, 2023, regarding Effect of Variations in Traffic Growth, an increase of concession period from 25 years to 30 years is expected and hence considered in the revenue projection. As per the concession document, the Actual Average Traffic and the impact on Concession Period has to be computed as on April 1, 2024, after considering the traffic prevailing on first anniversary of Target Date (March 31, 2023). This report provides the revenue for the full year of 2043-44. However, the revenue for 2043-44 may change depending on the Govt. approved end date of the concession period.

The annual revenue forecast is summarised in the Table 7.6 for the four TPs under normal scenario. The revenue summary for Optimistic and Pessimistic scenarios are presented in Table 7.7 and in Table 7.8 respectively.

Table 7-6: Projected Annual Toll Revenue Summary (Rs. in crores) under Normal Scenario

Year	TP1	TP2	TP3	TP4	Total
2024-25	38.31	22.37	22.65	4.49	87.81
2025-26	42.62	24.95	24.93	4.96	97.46
2026-27	47.80	27.89	28.03	5.61	109.32
2027-28	53.46	30.85	31.65	6.17	122.13
2028-29	59.32	34.50	35.45	7.02	136.28
2029-30	65.93	38.52	39.42	7.86	151.72
2030-31	73.30	42.88	44.21	8.61	169.00

1 INTRODUCTION

1.1 Background

Pune Sholapur Road Development Company Limited (PSRDCL) has appointed Segmental Infrastructure & Management Services as the Traffic Consultant to assess the traffic forecasting and toll revenue estimation for the Pune Sholapur Highway, which is a section of the National Highway 65 (Old NH 9) from Km. 144.9 to Km. 249.0.

The project road was upgraded to four lanes with paved shoulders in 2011-12 under the design-build-finance-operate-transfer basis under NHDP Phase III program. A concession agreement dated September 30, 2009 was entered into between the National Highway Authority of India (NHAI) and PSRDCL. The project commenced tolling in August 23, 2013. The concession period for this project is 19 years and 295 days commencing from appointed date i.e September 28, 2011 and as per the concession agreement, PSRDCL is entitled to collect fees from project highway users, subject to the National Highways fee rules. PSRDCL has submitted for the extension of concession period for 3 years and 351 days (letter no. PSRDCL/PRJ/TEC/CLO-579/4513 dated 23rd June 2021). Hence the traffic and revenue projections are made upto the year 2036-37.

1.2 Project Road Features

NH 65 runs in the east- west direction through the states of Maharashtra, Karnataka, Telangana, and Andhra Pradesh (total length: 926 km). It starts from Pune (Maharashtra) and ends at Machilipatnam (in Andhra Pradesh). Other cities through which the highway passes are Solapur, Hyderabad, Vijayawada and Machilipatnam. This is made a four-lane road throughout the length with bypasses at major cities like Indapur, Solapur, Hyderabad, Suryapet, etc. It is the prime corridor between Mumbai/ Pune region in the west and Hyderabad/Vijayawada region in the east.

Project road starts from Km. 144.9 (near Indapur in Pune district) and ends at Km. 249.0 near Solapur with a length of 101.30 Kms. The project road falls under two districts of Maharashtra namely Pune and Solapur. The important towns and settlements along the project road are Indapur, Temburni, Mohol and Solapur. In addition to the through traffic (interstate traffic), the project stretch provides seamless connectivity between Pune and Solapur.

NH 52 (running from Sangrur in Punjab and passing through Haryana, Rajasthan, Madhya Pradesh, Maharashtra and end at Akola in Karnataka) crosses the project road at Solapur. The traffic towards Telangana/Andhra Pradesh/Tamil Nadu continue through NH 65 and traffic bound to/from Karnataka divert to NH 52 from the project road at Solapur.

The project road is presented in Figure 1.1. Toll plazas are present at two locations and both are located in Solapur district. Both toll plazas have equal control length of 50.65 Km each(Source: Schedule R of Concession document).

- Toll plaza 1, (Km 173.500, Warwade TP), and
- Toll plaza 2, (Km 69+000, Sawaleshwar TP)

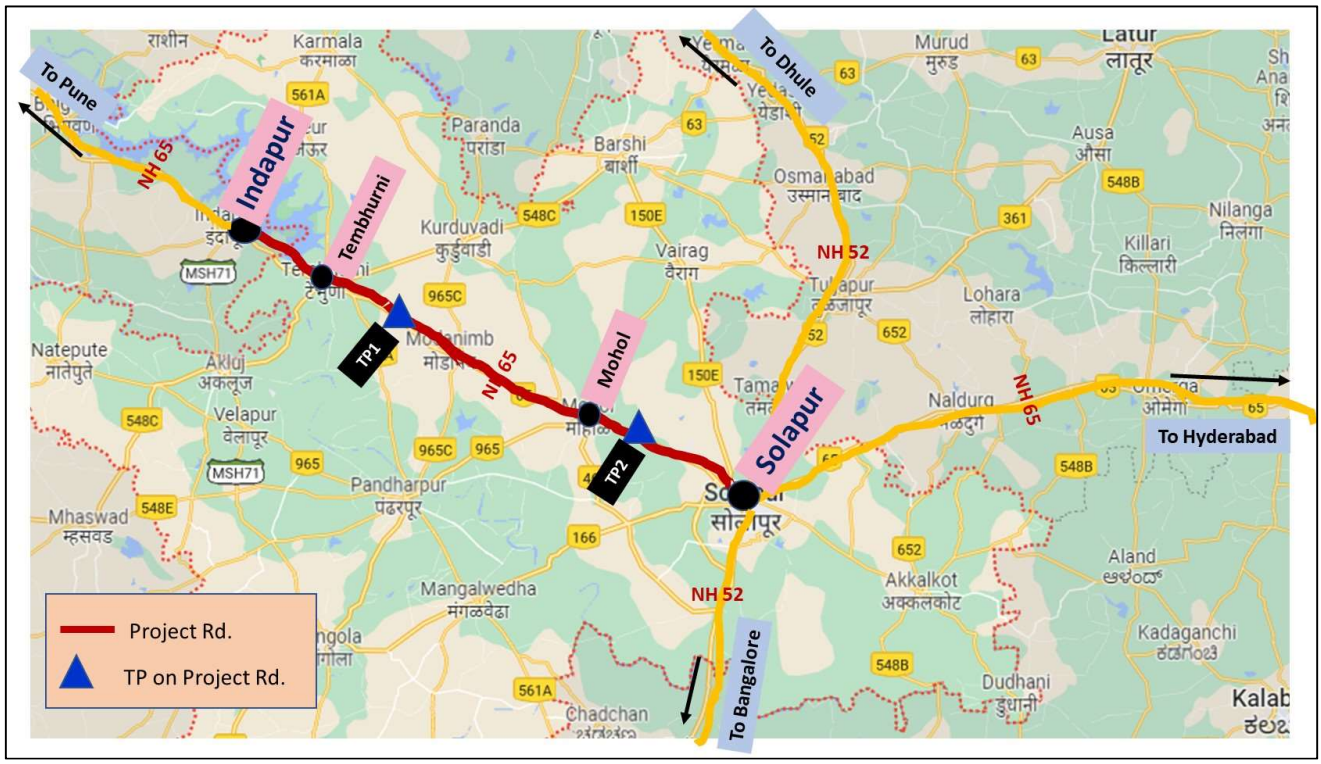

Figure 1-1: Project Road

Views of Toll Plazas

1.3 Objectives and Scope of Services

The prime objective of the present study is to update the traffic and toll revenue forecast based on the actual traffic scenario as of September 2024. The scope of the study is as listed below:

- Updation of the traffic report submitted by consultant in the month of Apr. 2024
- Collection of Class wise Traffic data from the TMS System/Toll Records from the operational toll plazas on the project road till September 2024 to derive the Average Daily Traffic (ADT)
- Establishing seasonality factors using available past traffic data and/or from using fuel sales data or using the past actual traffic data or any relevant data (if needed)
- Estimation of Annual Average Daily Traffic (AADT) for financial year 2024-25 from ADT and adopting suitable seasonal factors
- Updation of projections of traffic and revenue based on the actual traffic and revenue observed for the year 2024-25.

1.4 Organization of the Report

As mentioned above, the present study focuses on updating the traffic report submitted in Apr. 2024 and hence no fresh traffic surveys are carried out. The details of the traffic surveys (OD surveys) done as part of the previous study is reproduced here. The traffic and revenue projections are made using the traffic growth rates of the previous study. The report is organized in seven chapters as given below.

- Chapter 1 Brief background of the project and scope of study
- Chapter 2 Socio economic profile of the project area
- Chapter 3 Toll traffic data analysis and estimation of tollable AADT (2024-25) based on the traffic data from Apr. to Sept. 2024.
- Chapter 4 Traffic OD surveys and data analysis (reproduced from earlier report)
- Chapter 5 Upcoming Road Projects & Impact Assessment
- Chapter 6 Traffic growth rate estimation (reproduced from earlier report) & Traffic Projection
- Chapter 7 Updated Toll revenue projection

2 STUDY AREA PROFILE

As mentioned in Chapter 1, the project road passes through the state of Maharashtra. Hence, the socio-economic profile of Maharashtra is discussed in this chapter.

2.1 Socio-Economic Profile of Maharashtra

Maharashtra occupies the western & central part of India and has 720 km long coastline. The State is surrounded by Gujarat to the north west, Madhya Pradesh to the north, Chhattisgarh to the east, Telangana to the south east, Karnataka to the south and Goa to the south west. For administrative convenience, the State has been divided into 36 districts and 6 revenue divisions. It has a population of 11.24 crore (2011 census) and a geographical area of about 3.08 lakh sq. km and the state ranks 2nd by population and 3rd in terms of geographical area. Maharashtra is one of the highly urbanised states in India.

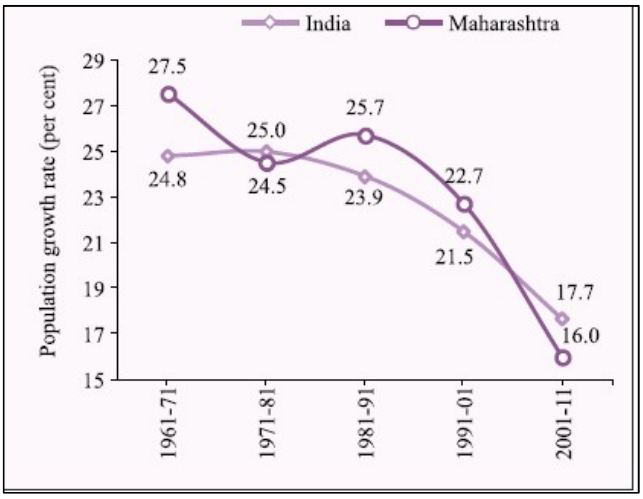
Socioeconomic profile of Maharashtra is presented in **Table 2-1**.

Table 2-1: General Socioeconomic Profile of Maharashtra

Sl. No	Parameters	Values
1	Population	112.37 million
2	Administrative districts	36
3	Population density (persons per sq km)	365
4	Literacy rate	82.3
5	NSDP (for 2021-22 at constant price, 2011 base) Rs. In Crores	1731189
6	Per Capita Income (Rs.)	2,15,233 (2021-22)

Source: Maharashtra Economic Survey 2022-23, Census 2011, RBI

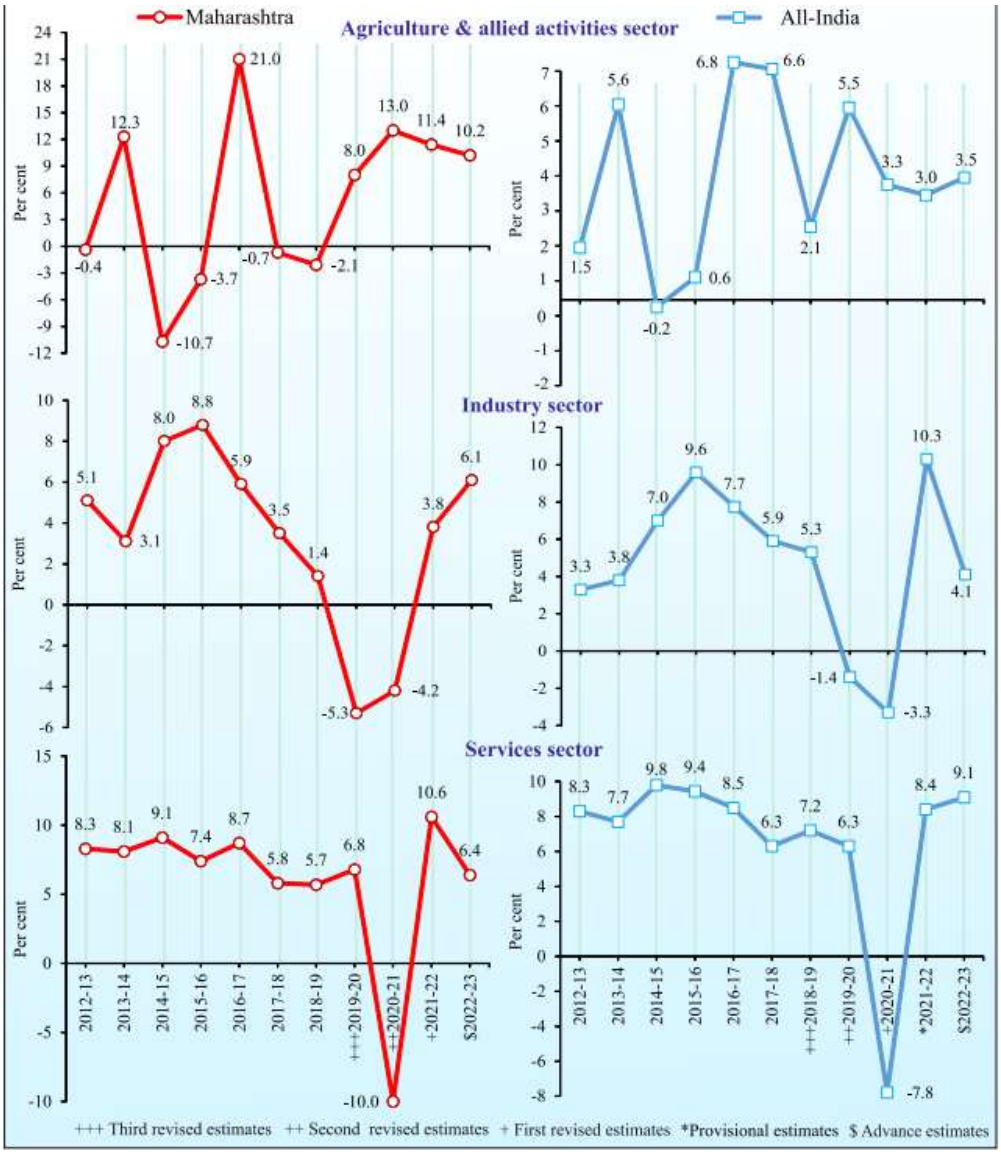
Population Growth: The percentage decadal growth rate of the State population during 2001-2011 has registered sharp decline from 22.7 per cent in 2001 to 16.0 per cent in 2011, a decrease of 6.7 percentage points.



State Income: As per the first revised estimates, the real State Income i.e. NSDP (at constant 2011-12 prices) in 2021-22 is estimated at 17,31,189 crore, showing an increase of 9.1 per cent over

the previous year. The Per Capita State Income is estimated at 2,15,233 during 2021-22 whereas it was 1,83,704 during 2020-21.

In the current (base year 2011-12) series from 2011-12 to 2021-22, the average share of 'Agriculture & allied activities', 'Industry' and 'Services' sector in nominal GVA is 18.4 per cent, 29.6 per cent and 52.0 per cent respectively.



Growth trend in different sectors of the economy (Gross Value Added/Gross State Value Added)

Industry: The State is an industrial hub and has been contributing majorly to the growth of the national economy. The six important industries in the state are cotton textiles, chemicals, machinery, electricals, transport, and metallurgy. The economy of Maharashtra is mainly driven by manufacturing, finance, international trade, mass media, technology, petroleum, fashion, apparel, gems & Jewellery, IT & ITES and tourism. The State has well developed industrial ecosystem for industries viz. automobile (Pune and Aurangabad region), Electronic Systems Design & Manufacturing (Pune region), Pharmaceuticals & Chemicals (Mumbai-Thane, Aurangabad & Pune region), Engineering (Ahmednagar-Nashik, Pune & Aurangabad region), Textile (Solapur-Pune, Nagpur & Amravati region), Food Processing (Solapur-Pune, Ahmednagar-Nashik, Nagpur & Amravati region), Logistics (Mumbai-Thane and Nagpur & Amravati region), Cement & Steel industry (Vidarbha- Marathwada region) and IT & ITES (Mumbai-Thane, Pune, Nagpur & Amravati region). The State has the largest number of large and mega projects in the country.

Exports from the State cover a wide range of products such as gems & jewellery, petrochemicals, readymade garments, cotton yarn, metal & metal products, agro-based products, engineering items, drugs & pharmaceuticals and plastic & plastic items.

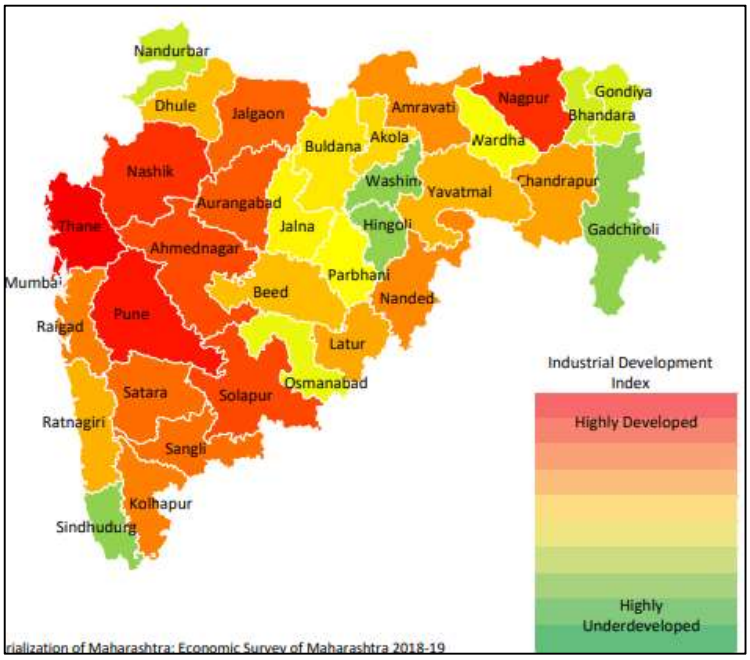
Table 8.5 Exports from Maharashtra and All-India

(₹ Crore)

Year	Maharashtra	All-India
2018-19	5,08,975	23,07,726
2019-20	4,59,637	22,19,845
2020-21+	1,72,262	9,39,924

Source : Directorate of Industries, GoM +upto September

Mining: Around 58 thousand sq km (19 per cent of the State's total geographical area) has been identified as the total potential mineral area in the State. Bhandara, Chandrapur, Gadchiroli, Nagpur, Gondiya & Yavatmal districts in Vidarbha region, Kolhapur in Western Maharashtra and Raigad, Ratnagiri & Sindhudurg districts in Konkan region have deposits of major minerals like coal, limestone, manganese ore, bauxite, iron ore, kyanite, fluorite (graded), chromite, etc.



Textiles: The State produces ample quantity of cotton & silk and fairly good quantity of wool. It also produces large quantity of non-conventional yarn from bamboo, banana, ghaypat, ambadi and coir. The State has set an objective of achieving 100 percent processing of all the cotton grown. Textile parks provides a platform to many small and medium industries to flourish their businesses. There are 13 Textile Parks in the State at Hinghanghat (Wardha), Basmat (Hingoli), Latur (Latur), Shirpur, Dhule & Degaon (Dhule), Bhivandi (Thane), Baramati (Pune), Islampur (Sangli) and Ichalkaranji (Kolhapur). In all there are 631 units functioning in these13 textile parks with total employment of 25,576.

The relative industrialization of the project influence region is given in Figure given below. The project stretch passes through Pune Solapur regions, in which both regions are highly industrialized.

Key industrial clusters in Maharashtra are given below.

The thrust sectors are given below.

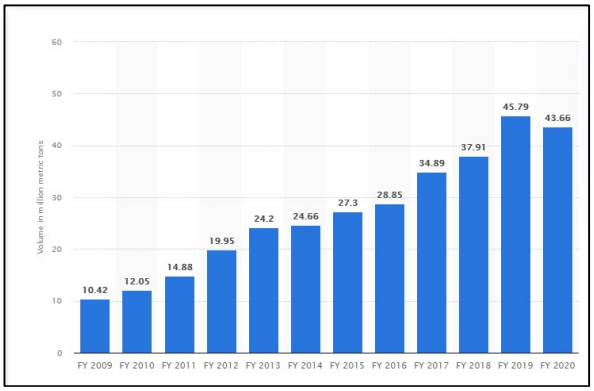
- Industry 4.0 (AI, 3D Printing, Internet of Things, Robotics and Nanotechnology, among others)
- Electronic Systems Design & Manufacturing (ESDM) & Semiconductor Fabrication (FAB
- Electric Vehicles (Manufacturing, Infrastructure & Servicing)
- Promotion of Integrated Data Centre Parks (IDCP)
- Aerospace and Defence Manufacturing
- Information Technology (IT) & IT enabled Services (ITeS)
- Biotechnology, Medical & Diagnostic Devices
- Agro & Food Processing (secondary & tertiary processing units)
- Logistics & Warehousing
- Textile Machinery Manufacturing
- Sports and Gym Equipment Manufacturing
- Nuclear Power plant equipment manufacturing
- Mineral / Forest based Industries
- Green Energy/ Bio Fuel Production

2.1.1 Port Sector

Maharashtra has the second-largest coastline among all maritime states in India. The state has two major ports, Mumbai Port and Jawaharlal Nehru Port (JNP) both located in Mumbai harbour. While Mumbai port has been acting as one of the major gateways for more than a century, JNP since its establishment in 1990s has emerged as a premier container handling port, accounting for almost 55% of the container traffic movement amongst the major ports in India.

The operational minor (non-major) ports under Maharashtra Maritime Board(MMB) handling cargo include the ports at Dahanu, Tarapur, Dharamtar, Ulwa-Belapur, Trombay, Revdanda,

Dighi, Dabhol, Bankot, Kelshi, Ratnagiri, Jaigad, Vijaydurg and Redi. The cargo commodities handled at the minor ports are bulk cargo and include coal, clinker, iron ore, limestone, cement, bauxite, sand, LPG, molasses etc.



Mumbai port has recorded 12.1 per cent decline in cargo movement at 53 million tonnes, while JNPT has moved 64 million tonnes of cargo during 2020-2021, thereby recording a decline of 5.32 per cent over the previous year 2019-2020. Covid-induced lockdowns disrupted the import and export activities in 2020-2021.

2.1.2 Socio Economic Features of Project Influence Districts

As the project corridor directly connects the districts, Pune and Sholapur, the socio economic parameters of these districts are analysed here.

Districts	Population (2011)	Area (sq. km.)	Density of Population (persons/sq km)
Pune	9,429,408	15,643	603
Solapur	4,317,756	14,895	290

The decadal growth in population of Pune and Solapur districts are 30.34% and 12.16% respectively. Gross district domestic product for the project influence districts are given below

Real Gross district domestic product at Constant (2011-12) prices

GDDP (Rs. in crores)	2018-19	2019-20	2020-21	2021-22	CAGR (2018-19 to 2021-22)
Pune	2,28,102	2,34,898	2,13,158	2,32,369	0.6%
Solapur	65,321	67,744	65,239	71,332	3.0%

Pune: Pune district is one of the districts in Maharashtra with seventh largest metropolitan economy and sixth highest per capita income in the country. Major revenue of the district comes from IT and manufacturing industries.

Agriculture: Wheat, rice , gram, bajra, sugarcane, groundnuts, chillies, pulses, vegetables, fruits and flowers are the major crops. Both rabi and kharif crops are grown in several parts of the district.
Industries: Pune is one of the most industrialized district in Maharashtra. The important large scale industries include sugar, automobile, packaging, pharmaceutical, engineering goods etc. The small-scale industries include Agricultural tools, pumps, plastic, electronics etc. The district has some defence factories as well.

Maharashtra Industrial Development Corporation (MIDC) has a large presence in the district with large industrial estates at Chakan, Bhosari, Ranjangaon, Hadapsar and Chinchwad.

The Pune region has become the top industrial belt among all the Maharashtra Industrial Development Corporation (MIDC) zones, housing the largest number of industrial units, according to recent reports. The Pune region, which includes Pune, Pimpri-Chinchwad, Talegaon, and Chakan, has been able to attract the greatest number of industrial units due to its favorable location, skilled workforce, and availability of land. As per the latest data, the Pune region has over 8,000 registered industrial units, the highest among all the MIDC zones in Maharashtra. These units provide employment to a large number of people and contribute significantly to the state's economy.

The Pune region's success in the industrial sector can be attributed to its strategic location, availability of resources, and supportive policies. The region's growth in this sector is expected to have a positive impact on the state's economy and provide employment opportunities to many people.

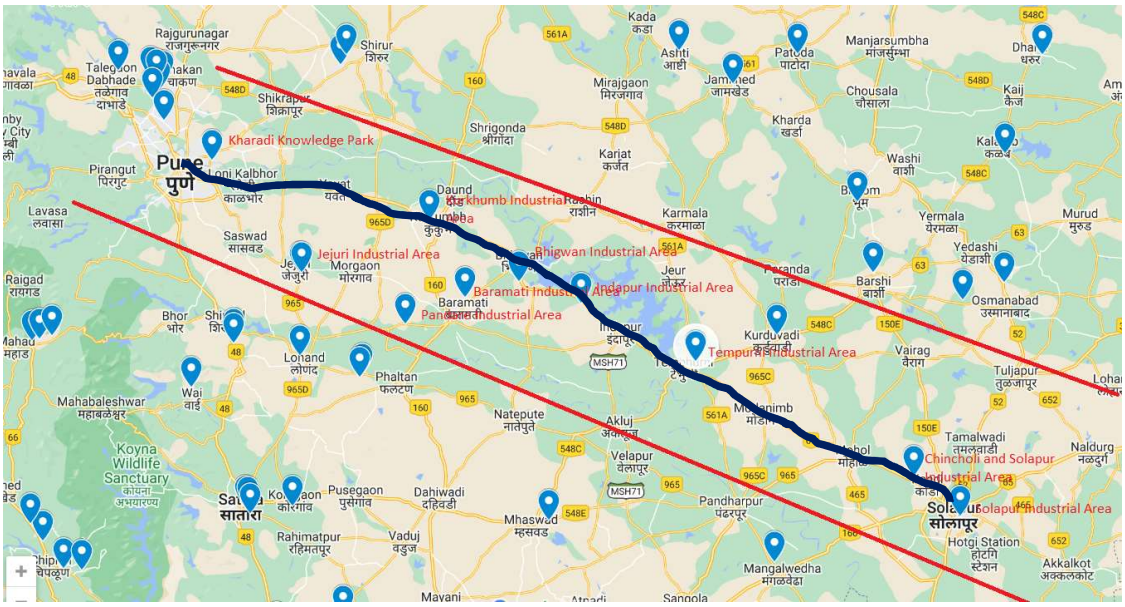
The MIDC is taking steps to develop the infrastructure in the region and attract more industries, leading to further growth in the future. The growth of industrial units in the Pune region is expected to continue, with many companies showing interest in investing in the area.

Solapur District: According to the 2011 census Solapur District has a population of 4,317,756, the 43rd largest district in India by population (out of 640). The district has a population density of 290 inhabitants per square kilometre (750/sq mi). Its population growth rate over the decade 2001-2011 was 12.1%.

The economy of the district is mainly based on agriculture. Major agricultural crops include Jowar, wheat, sugarcane, chana, tur and groundnut. Sugarcane is the majorly grown crop in Solapur. The district is called the Granary of Sorghum.

The district is also famous for its Chadder, handloom and powerloom and beedi industries. Solapur also homes many fruit processing industries.

Industrial Areas in Proximity to Project Corridor



2.2 Proposed/Ongoing projects which will have an impact on the economic growth of Maharashtra

Development of Satara Industrial Area under BMIC Project: Government of India has envisaged the development of Bengaluru Mumbai Industrial Corridor (BMIC) between Karnataka and Maharashtra with an objective to achieve accelerated development and regional industry agglomeration in the states of Karnataka and Maharashtra. An area is earmarked in Satara as investment region, which are proposed to be self-sustained nodes with world class infrastructure, road and rail connectivity for freight movement to and from ports and logistics hubs, served by reliable power, quality social infrastructure, and provide a globally competitive environment conducive for setting up businesses. National Industrial Corridor Development Corporation Limited (NICDC) is responsible for the implementation of this project. The project is in the planning stage.

Delhi Mumbai Industrial Corridor (DMIC): Futuristic industrial cities are planned along this corridor with strong economic base, which can compete with the best manufacturing and industrial destinations in the world and will activate local commerce. This will be developed along the Dedicated Freight Corridor (DFC), and 150 km on either side of DFC forms part of DMIC.

This corridor covers two industrial areas viz. Shendra-Bidkin (84 sq. kms) and Dighi port (253 sq. kms) in the Maharashtra State. The Shendra-Bidkin Industrial Area is envisioned as a very large-scale industrial cluster and the Dighi Port Industrial Area is intended to be a port as well as trade and industrial hub that will augment the port of Mumbai.

Aurangabad Industrial City (AURIC), a well-planned and Greenfield smart industrial city based on the concept of Walk to Work, is being developed across an area of 10,000 acres in the State as part of DMIC. State-of-the art smart technology along with infrastructure with focus on clean, reusable and recycling methodologies are being adopted.
A feeder rail links Nagpur to the DMIC corridor is also planned.

Prosperity Corridor: The Maharashtra Prosperity Corridor is a flagship project of the state government. It has two phases. The first phase relates to the Nagpur-Mumbai eight-lane 701-km road. The second phase relates to development of the 24 nodes (townships) along the road. The total land required for the project is 8,604 hectares and the project is under implementation.

Japanese Industrial Parks (JIT): SUPA JIT park is located near Pune, with 500 acre development in Phase I. It is developed and marketed by Maharashtra Industrial Development Corporation (MIDC).

2.3 Summary

This chapter presents the socio-economic profile of the project influencing state, ie; Maharashtra in general. Maharashtra is the most industrialized state and has maintained the leading position in the industrial sector in India. The state's per-capita income is 40% higher than the all-India average. Maharashtra contributes about 25% of the country's industrial output. Industrial activities in the state is concentrated in seven districts: Mumbai city, Mumbai suburban, Thane, Aurangabad, Pune, Nagpur and Nashik. Industries in Maharashtra include chemical and chemical products (18%), food and food products (16%), refined petroleum products (13%), machinery and equipment (8%), textiles (7%), basic metals (6%), motor vehicles (5%) and furniture (4%). The growth in the economy of the state will have a direct bearing on the expected future traffic.

3 ANALYSIS OF DATA COLLECTED THROUGH SECONDARY SOURCES

3.1 Toll Traffic Data & Analysis

The following toll traffic data has been provided by PSRDCL for the two toll plazas on the project road:

- Monthly traffic and revenue data from Apr. 2014 to Sept. 2024. The toll data of Apr. to Sept. 2024 has been used to derive the annual average daily traffic (AADT) for the financial year 2024-25. The past data has been analysed to understand the growth trend of traffic on the project road in the past.
- The monthly traffic data is also used to estimate trip categorisation/ type of tickets availed by the vehicles (ie; single, return, local pass, monthly pass and exempted) in paying toll and adopted to estimate the toll ticket categorisation of the vehicles in the revenue estimation.

Various vehicle types as per the data includes:

- Car/Taxi/Mini LGV
- LCV/Mini Bus
- Bus
- 2 Axle Truck (2 AT)
- MAVs (3 AT and above) and
- Over Sized Vehicles (OSV)

3.1.1 Analysis of Monthly Toll Traffic Data (Apr. to Sept. 2024)

The variation of average daily traffic during the months from Apr. to Sept. 2024 is presented in Figure 3.1 to Figure 3.2 for the two toll plazas respectively. Both the TPs have normal traffic flow pattern during the period.

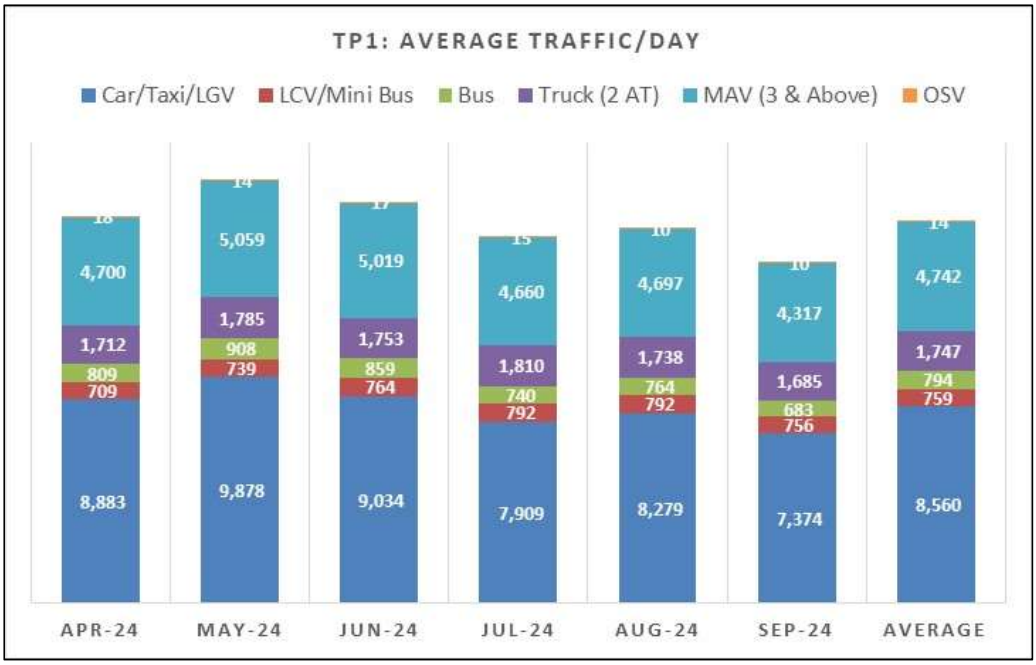


Figure 3-1: Average Daily Toll Traffic observed at TP1 from Apr. to Sept. 2024

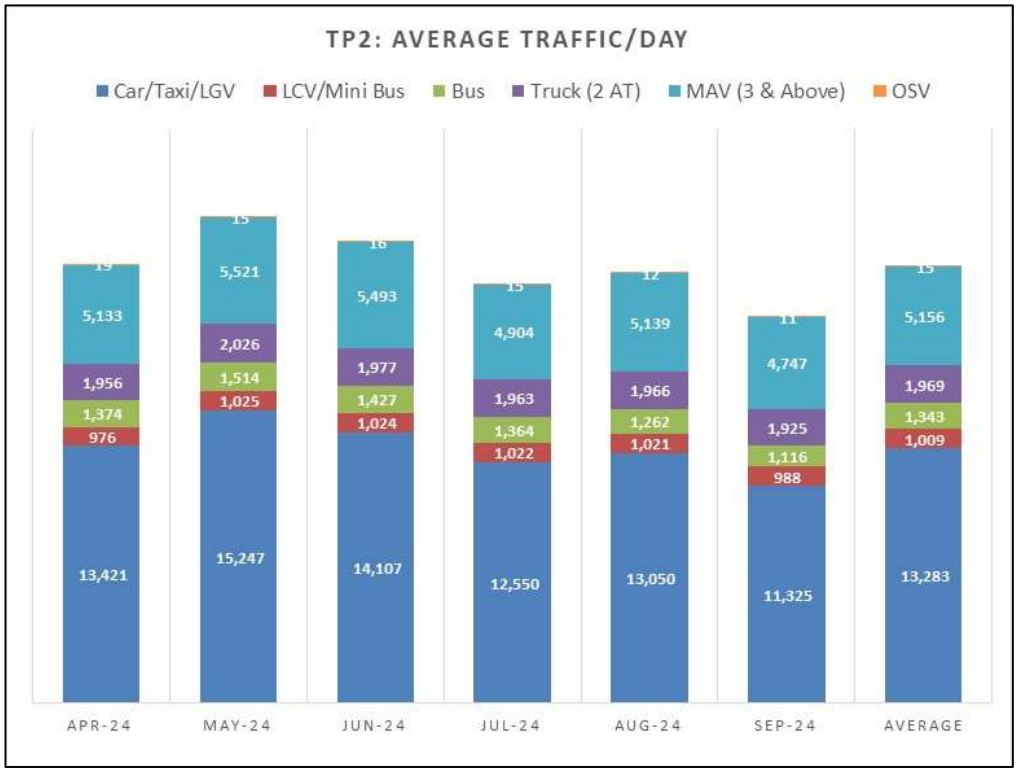

Figure 3-2: Average Daily Toll Traffic observed at TP2 from Apr. to Sept. 2024

3.1.2 Average Daily Traffic (2024-25)

Toll traffic data of the six months (Apr. to Mar.2024) is used to calculate the Average Daily Traffic (ADT) for 2024-25. The estimated AADT for the TPs are presented in Table 3.1. Traffic is higher at TP2, as it is located close to Solapur city. Car/Taxi/Mini LGV category forms the major component of the tollable traffic at both TPs (>50%) , followed by MAVs (3 & above axles).

Table 3-1: Average Daily Traffic (2024-25)

	Nos.		%	
Veh. Type	**TP1**	**TP2**	**TP1**	**TP2**
Car/Taxi/Mini LGV	8,560	13,283	51.5%	58.3%
LCV/Mini Bus	759	1,009	4.6%	4.4%
Bus	794	1,343	4.8%	5.9%
Truck (2 AT)	1,747	1,969	10.5%	8.6%
3 AT+ MAV	4,742	5,156	28.5%	22.6%
OSV	14	15	0.1%	0.1%
Total Veh.	**16,615**	**22,775**	**100.0%**	**100.0%**
Total PCU	**38,744**	**48,024**		

Source: PSRDCL Toll Traffic data. This traffic includes exempted vehicles

3.1.3 Comparison of Traffic (2023-24 and 2024-25)

The comparison of traffic observed between April to September of 2023-24 and 2024-25 are provided in Table 3.2. During this one-year period, the overall traffic has grown at 6% at TP1 and 7% at TP2.

Table 3-2: Comparison Average Daily Traffic between Apr. and Sept. (2024-25 Vs 2023-24)

Veh. Category	**TP1**		**TP2**	
	2024-25	**2023-24**	**2024-25**	**2023-24**
Car/Taxi/LGV	8,560	8,295	13,283	12,883
LCV/Mini Bus	759	692	1,009	902
Bus	794	752	1,343	1,247
Truck (2 AT)	1,747	1,515	1,969	1,667
MAV (3 & above)	4,742	4,431	5,156	4,672
OSV	14	11	15	11
Total	**16,615**	**15,696**	**22,775**	**21,382**
PCU	**38,744**	**36,140**	**48,024**	**44,067**
Annual Variation (Total veh.)	**6%**		**7%**	

3.1.4 Estimation of Seasonal Factors

The factors estimated from the monthly past traffic data from PSRDCL (2014-15 to 2023-24). ADT considered in this report is for the period from April to September and seasonal factors are also estimated for the same period.

The traffic data for the years 2020-21 and 2021-22 excluded from the analysis due to irregularities in the data caused by COVID impact. The derived factors are presented in Table 3.3. The average values for all the years, excluding the two years of COVID impact, is recommended as seasonal factors for toll revenue forecast.

Table 3-3: Estimated Seasonal Factors Derived from Toll Data for the period between Apr. and Sept.

	TP1						TP2				
	Car/Taxi / Mini LGV	LCV/ Mini Bus	Bus	Truck (2 AT)	(3 AT + MAV) /OSV		Car/Taxi / Mini LGV	LCV/ Mini Bus	Bus	Truck (2 AT)	(3 AT + MAV) /OSV
2014-15	1.04	0.99	0.94	0.97	1.04		1.01	0.99	0.94	1.02	1.07
2015-16	1.04	1.05	1.00	1.09	1.08		1.02	1.02	0.99	1.03	1.02
2016-17	1.05	0.95	1.00	1.01	0.98		1.05	0.96	0.98	1.00	0.99
2017-18	1.05	1.03	1.03	0.94	0.98		1.04	1.09	1.01	1.03	1.10
2018-19	0.99	0.94	0.91	1.05	1.00		0.99	0.98	0.96	1.05	1.05
2019-20	1.02	0.97	1.00	0.97	0.98		1.01	0.95	1.01	1.02	1.02
2022-23	1.05	1.00	1.04	1.00	0.97		1.03	1.03	1.03	1.04	1.07
2023-24	1.02	0.99	1.00	1.04	1.01		1.01	1.02	0.99	1.05	1.03
Average*	**1.03**	**0.99**	**0.99**	**1.01**	**1.00**		**1.02**	**1.01**	**0.99**	**1.03**	**1.04**

**- Excluding the values for the years 2020-21 and 2021-22*

3.1.5 Annual Average Daily Traffic (2024-25)

Toll traffic is directly linked to the road traffic, seasonal factors estimated from the toll traffic data has been recommended in the present study. AADT is obtained by multiplying ADT with the recommended seasonal factors. Traffic is higher on TP2, when compared to TP1 as TP2 is located close to Solapur city. Car/Taxi/Mini LGV category forms the major component of the tollable traffic at both TPs, followed by MAVs (3 & above axles). The estimated AADT for the TPs are presented in Table 3.4.

Table 3-4: Annual Average Daily Traffic (2024-25)

	Nos.	
Veh. Type	**TP1**	**TP2**
Car/Taxi/Mini LGV	8,839	13,544
LCV/Mini Bus	751	1,015
Bus	784	1,329
Truck (2 AT)	1,763	2,026
3 AT+ MAV	4,762	5,380
OSV	14	15
Total Veh.	**16,913**	**23,309**
Total PCU	**39,120**	**49,432**

Source: PSRDCL Toll Traffic data. This traffic includes exempted vehicles

3.1.6 Categorisation of Toll Traffic

The toll traffic data consists of two general categories, i.e. (1) traffic paying toll (captive toll traffic) and (2) exempted. The exempted type includes the exempted traffic as per the toll policy of the project (mainly constitute Govt. Patrol/ Police/Military/ Convoy vehicles/ post, and telegraph vehicles commuting along the road) and local vehicles exempted from toll.

Toll traffic categorisation has been developed using the monthly data of 2024-25 (Apr.- Sep.) and using the whole year data of 2023-24. Since the 2023-24 data represents the full year traffic flow, it is adopted in the report.

The share of exempted vehicles observed at the toll plazas (of the total traffic) using the traffic data of 2023-24 are presented in Table 3.5.

Table 3-5: Share of Exempted Vehicles

Veh Type	TP1	TP2
Car/Taxi/Mini LGV	9.74%	8.91%
LCV/Mini Bus	5.66%	9.77%
Bus	0.39%	1.13%
Truck (2 AT)	1.68%	2.10%
3AT+ MAV	1.88%	0.88%
OSV	0.06%	0.10%
Total	**19.41%**	**22.88%**

Source: PSRDCL Toll Traffic data (2023-24)

The above share of traffic has been excluded and toll categorisation is made for the remaining traffic, which is the captive toll traffic. Trip categorisation (single trips, return trips, monthly pass and local pass for car) for the captive toll traffic is presented in Table 3.6.

Table 3-6: Trip Categorisation derived from Toll Data

Veh Type	Single	Return	Local Monthly Pass	Monthly Pass	Total
TP1					
Car/Taxi/Mini LGV	58.32%	40.22%	1.46%	0.00%	100.00%
LCV/Mini Bus	70.14%	29.85%	0.00%	0.01%	100.00%
Bus	18.48%	81.52%	0.00%	0.00%	100.00%
Truck (2 AT)	83.78%	16.22%	0.00%	0.00%	100.00%
3AT+ MAV	89.35%	10.65%	0.00%	0.00%	100.00%
OSV	99.16%	0.84%	0.00%	0.00%	100.00%
TP2					
Car/Taxi/Mini LGV	46.33%	48.94%	4.73%	0.01%	100.00%
LCV/Mini Bus	59.41%	37.73%	0.00%	2.86%	100.00%
Bus	14.90%	85.10%	0.00%	0.00%	100.00%
Truck (2 AT)	77.30%	22.70%	0.00%	0.00%	100.00%
3AT+ MAV	83.51%	16.49%	0.00%	0.00%	100.00%
OSV	96.63%	3.37%	0.00%	0.00%	100.00%

Source: PSRDCL Toll Traffic data (2023-24)

3.1.7 Past Growth Trend of Toll Traffic

Monthly toll traffic data is available from Apr.'14 to Mar.'24 and is used to assess the growth trend of the traffic. To obtain a general traffic growth scenario, the average daily traffic for all months of toll operation for the last ten years (2014-25 to 2023-24) is considered and the summary along with

the observed growth rates are presented in Table 3.7. All vehicle types had a growth trend in the past. The decline in the number of LCV/min bus traffic over the years may be due to the following reason. The Fast-Tag operation started on the project road in May 2016. As per the Fast-Tag manual, the toll amount for goods vehicles is decided based on the gross weight of the vehicle and LCV (3 axle) is clubbed along with 2 AT/Bus category. The Fast-Tag penetration increased over the years and the toll data of LCV/mini bus category excluded partially LCV (3 Axle) and added with 2AT. Hence the decrease in the LCV/Mini bus numbers. As it is added with 2Axle truck/Bus category and hence this vehicle category has higher growth.

The past traffic trend indicate that the project road has a potential to attract more traffic in the future.

Table 3-7: Observed Growth of Daily Traffic in the Past - TP1

Year	Car/Taxi /Mini LGV	LCV/Mini Bus	Bus	2 AT	3AT+ MAV	Total
TP1						
2014-15	2,292	734	262	728	3,573	7,589

4 TRAFFIC OD SURVEYS & DATA ANALYSIS

4.1 OD Survey Methodology & Locations

Roadside Interview method, as detailed in IRC: 102-1988, is used for conducting O-D survey. The survey was carried out for tollable modes (both passenger and goods vehicles) for two days (in both directions). The information collected includes trip origin, trip destination, commodity details for goods vehicles and purpose and frequency of travel for passenger vehicles, etc. The data analysis is carried out to assess the movement pattern on the project road.

OD surveys were carried out at the toll plaza locations on the project road. The survey locations along with the schedule are presented in Table 4.1.

Table 4-1: Schedule of Surveys

Sl. No.	Type of Survey	No. of Locations	Location	Schedule
1	OD survey 2days (2X24)	2	TP1	25/04/2023 & 26/04/2023
			TP2	27/04/2023 & 28/04/2023

Survey Photos

Data Consistency: OD data have been checked location wise, mode wise and direction wise for the toll plaza location. The following consistency checks were done for data reliability.

- Zone coding was checked with raw data
- Illegal trips are removed from the data

4.2 Zoning System

Suitable zoning system has been developed for the study purpose. The zoning system developed for the study is listed and presented in Table 4.2.

Table 4-2: Zone list for the study

No.	Zone	Remarks
1	Varwade, Akumbe, Bhend, Aran, Modanimb,	Solapur district
2	Solankarwadi, Shetphal, Telangwadi, Kuranwadi, Ashti, Karkamb, Vyavahare Wasti	
3	Sawaleshar, Lamboti, Arjunsoand, Pakani, Chincholikati, Somanath nagar, Shirapur, Wadwal, Gotewadi ,ophali	
4	Darfal, Mohitewadi,Morvanchi, Ashte, Kolegaon, Virwade, Kondi, Kegaon, Hiraj, Parite, Tulshi, Jadhavwadi	
5	Solapur city	
6	Remaining areas of Solapur district

4.3 Sample Size

The sample size covered in OD survey for various types of vehicles is given in Table 4.3.

Table 4-3: Sample Size

Vehicle Type	TP1	TP2
Car/Taxi/Mini LGV	17%	13%
LCV/Mini Bus	37%	32%
Bus	37%	17%
2 AT	22%	27%
3 A T + MAV	34%	35%

4.4 Influence Factors

The influence factors (the share of the origin or destination of the trip) indicates the importance of the area or region influencing traffic on the project road. It is estimated as given below:

$$IF = [(P_i + A_i) \text{ x } 100] / (\sum(P_i + A_i))$$

Where, IF = Influence Factor

P_i = Total trips produced in Zone i

A_i = Total trips attracted in Zone i

Influence factors obtained from the OD data are presented in Table 4.4 and Table 4.5 for the two TPs. The two toll plazas have same travel pattern and project road carries both intercity (within the Maharashtra state) interstate traffic. Since the second TP is located close to Solapur city, its influence is more when compared to the first TP. In Maharashtra, the districts of Solapur (the project road falls), Pune and Mumbai are the districts influencing the traffic more. Impact of other districts are not significant in the case of goods vehicles. The interstate traffic is generated mainly to/from Gujarat in the north and Karnataka, Tamandu and Andhra Pradesh in the south.

Table 4-4: Influence Factors at TP1

	Car/Taxi	Mini Bus	Bus	Mini LGV	LCV	2 AT	3AT	MAV
Solapur district	35.1%	50.0%	32.4%	50.0%	28.1%	24.1%	16.8%	15.5%

4.5 Trip Distribution

The trip distribution observed in OD surveys on the project road is presented in Table 4.6 and in Table 4.7 for the two TPs. Passenger vehicles are confined in Maharashtra, while goods vehicles make both intercity (within Maharashtra) and interstate trips. Both the toll plazas have same travel pattern.

Table 4-6: Trip Distribution observed at TP1

Region	Car/Taxi	Mini Bus	Bus	Mini LGV	LCV	2 AT	3AT	MAV
Within Maharashtra	85.3%	100%	83.5%	100%	51.3%	43.8%	31.3%	29.6%

North-South	0.5%	1%	0.0%	0%	2.9%	4.5%	4.8%	5.6%
Remaining Areas	0.1%	0%	0.7%	0%	0.2%	0.5%	0.2%	0.9%
Total	**100.0%**	**100.0%**	**100.0%**	**100.0%**	**100.0%**	**100.0%**	**100.0%**	**100.0%**

As discussed earlier, the major intercity trips within Maharashtra are mainly bound between Pune/ Mumbai and Solapur. The major OD pairs (districts) in this category is presented in Table 4.8.

Table 4-8: Major OD Pairs within Maharashtra

Districts	Car/Taxi	Mini Bus	Bus	Mini LGV	LCV	2 AT	3AT	MAV
TP1								
Within Solapur	29.8%	77%	21.5%	64%	17.5%	15.4%	4.9%	8.9%
Solapur- Pune	26.0%	14%	29.1%	23%	25.0%	20.8%	20.9%	13.3%
Solapur-Mumbai	3.3%	0%	8.1%	2%	1.4%	3.0%	3.0%	3.1%
Total	**59%**	**91%**	**59%**	**89%**	**44%**	**39%**	**29%**	**25%**
TP2								
Within Solapur	35.9%	22%	23.3%	65.2%	0.8%	13.6%	11.8%	21.0%
Solapur- Pune	25.5%	18%	18.8%	16.4%	34.4%	18.1%	17.9%	17.4%
Solapur-Mumbai	5.9%	7%	10.6%	4.5%	8.9%	7.1%	10.0%	8.5%
Total	**67%**	**47%**	**53%**	**86.0%**	**44%**	**39%**	**40%**	**47%**

The important interstate OD pairs observed on the project road are presented in Table 4.9.

Table 4-9: Major Interstate OD Pairs on the Project Road

Interstate OD Pairs	Car/Taxi	LCV	2 AT	3AT	MAV
Pune- Karnataka	3.0%	7.0%	5.5%	7.1%	8.4%
Pune- Tamil nadu	0.3%	4.1%	4.1%	6.0%	4.4%
Pune- Telangana	2.5%	9.7%	7.4%	10.3%	7.2%
Mumbai- Karnataka	1.0%	4.9%	3.0%	2.3%	3.7%
Mumbai- Tamil nadu	0.2%	1.7%	2.9%	3.2%	1.9%
Mumbai- Telangana	1.3%	7.8%	9.9%	11.7%	8.3%
Gujarat- Karnataka	0.3%	2.7%	6.4%	8.1%	4.8%
Gujarat- Tamil nadu	0.1%	0.2%	0.8%	2.0%	1.4%
Gujarat- Telangana	0.2%	1.0%	1.1%	0.9%	1.9%
Total	**8.9%**	**39.0%**	**41.1%**	**51.5%**	**42.0%**

Note: Average values of ODs at TP1 and TP2

4.6 Commodity Movement

Commodity movement along the project road was obtained from the OD surveys. Table 4.10 and Table 4.11 provides the major commodities transporting through the project road for the two TPs. Important commodities include general items such as vegetables/fruits, food grains, petroleum Products, courier/parcels, machines/automobiles, etc.

Table 4-10: Commodity- wise Goods Movement Pattern at TP1

Commodity	Mini LGV	LCV	2 AT	3AT	MAV
Food Grains	0.0%	2.1%	1.9%	3.3%	3.3%
Minerals & Ores	0.0%	0.2%	0.2%	0.6%	1.0%
Machines / Automobiles	0.0%	3.9%	3.8%	6.1%	6.5%
Fruits/ Vegetables	44.1%	11.5%	7.9%	7.3%	8.8%

Commodity	Mini LGV	LCV	2 AT	3AT	MAV
Iron & Steel	1.8%	5.4%	5.8%	5.0%	7.5%

5 UPCOMING ROAD PROJECTS & IMPACT ASSESSMENT

5.1 Proposed Expressway Projects and their Impact

As presented earlier, the project road is part of a highway (NH 65) connecting in the east-west direction and hence comprises of interstate traffic significantly between Maharashtra/Gujarat and Karnataka/Tamil Nadu and Telangana (Refer Table presented below for the share of traffic/day).

	LCV	2 AT	3AT/MAV
Pune- Karnataka	7.0%	5.5%	8.0%
Pune- Tamil nadu	4.1%	4.1%	4.7%
Pune- Telangana	9.7%	7.4%	8.1%
Mumbai- Karnataka	4.9%	3.0%	3.4%
Mumbai- Tamil nadu	1.7%	2.9%	2.4%
Mumbai- Telangana	7.8%	9.9%	9.6%
Gujarat- Karnataka	2.7%	6.4%	5.9%
Gujarat- Tamil nadu	0.2%	0.8%	1.6%
Gujarat- Telangana	1.0%	1.1%	1.6%
Total	**39.0%**	**41.1%**	**45.3%**

Note: This traffic represents the candidate traffic for the expressway diversion

There are several expressways/economic corridors proposed through Maharashtra and may be beneficial/harmful to the project road traffic after their development. These expressways are under various stages of development and reliable details including alignment, length, route, completion schedule, etc. are not available. A detailed/accurate analysis on their travel cost is not possible due to the limited data source. However, an attempt is made to assess their bearing on the project road traffic using available information in the secondary domain.

Diversion Analysis: Diversion analysis is carried out using relevant IRC Codes as presented below:

- Vehicle Operating Cost (VoC) and Travel Time Cost (VoT) per trip for NH 44 and the Expressway as per the values specified in IRC SP 30: 2019 (Manual for Economic Analysis of Highways in India) for 2023-24
- Toll amount calculation for NHs is based on per km rate of the project stretch and the prevailing toll rate of the operational section of Delhi- Mumbai Expressway is adopted (as no specific details available for other expressways) for expressways
- Diversion % calculated based on the diversion curve equations given in IRC 108-2015: Traffic forecast on Highways

5.1.1 Diversion Analysis due to proposed Pune- Bangalore Expressway

Candidate Traffic: It is expected that the expressway would be advantageous to Mumbai/Pune – Bangalore regional traffic. Additionally, this expressway together with the Bangalore- Chennai expressway (which is in the developmental stage and expected completion in 2025) would be advantageous for Chennai bound traffic from Mumbai/Pune region. Candidate traffic was derived for respective toll plazas. The OD surveys were done on sample basis and on different days at TP1 and TP2 and the average for both TPs is adopted as the through (long distance) traffic plying on the two TPs to be same.

Candidate traffic as % of AADT	TP1			TP2		
	LCV	2 AT	3AT+MAV	LCV	2AT	3AT+ MAV
Pune- Karnataka/TN & Mumbai- Karnataka/TN	20.0%	16.3%	19.4%	15.8%	14.7%	17.2%

Source: OD Survey data analysis

Diversion Analysis: The expressway proposal is in the initial stage of land acquisition. Its route and alignment details are not published yet and hence only a broad impact assessment is possible.

Route comparison between Mumbai and Bangalore

1. Existing route: Mumbai to Pune (via. Existing Mumbai Pune Expressway) and Pune to Bangalore through NH65 (Pune- Solapur) and NH 52 (Solapur- Bangalore)
2. Proposed Route: Mumbai to Pune (via. Existing Mumbai Pune Expressway) and Pune to Bangalore through the proposed expressway.

Route Comparison	Length (Km)
Existing route	Total: 1,000 (Mumbai- Pune: 100 km, Pune- Blore: 900 km)
Proposed Route	Total: 850 (Mumbai- Pune: 100 km, Pune- Blore proposed exp.way:750 km)*

**- Assumption*

Travel Cost Estimation:

- Vehicle Operating Cost (VoC) and Travel Time Cost (VoT) per trip for NH 65 and the Expressways as per the values specified in IRC SP 30: 2019 (Manual for Economic Analysis of Highways in India) is escalated for 2023 by adopting an annual growth of @5% per annum

- Toll amount calculation for existing NH is based on per km rate of existing toll of project road (NH 65) and the prevailing toll rate of the operational section of Delhi- Mumbai

Expressway is adopted *(as no specific details available for the proposed Pune- Bangalore expressway).* The current amount of Mumbai- Pune expressway has used for the stretch.

Travel cost comparison of the two routes is presented in Table 5.1.

Table 5-1: Travel cost/trip comparison of Proposed Pune- Bangalore Expressway

	Existing route (NH) in INR				Proposed Route in INR			
	VOC	VOT	Toll	Total	VOC	VOT	Toll	Total
2 AT	39,668	1,593	5,038	**46,300**	31,946	879	6,711	**39,537**
MAV	57,835	2,508	9,006	**69,350**	46,553	1,384	10,828	**58,765**
LCV	36,547	1,593	2,538	**40,678**	31,118	879	3,131	**35,129**

Diversion Estimation: Diversion % calculated based on the diversion curve equations given in IRC 108-2015: Traffic forecast on Highways and the estimated diversion is presented in Table 5.2.

Table 5-2: Estimated Diversion Percentage to the Proposed Pune- Bangalore Expressway

Veh.	Cost Ratio (Proposed/ existing)	% Diversion
2 AT	0.85	76
MAV	0.85	77
LCV	0.86	75

Note: These diversion % are based on the assumptions discussed above

Based on the above analysis, the expected traffic diversion from the project road due the expressway is given in Table 5.3.

Table 5-3: Estimated Traffic Diversion %

	TP1			TP2		
	LCV	2 AT	3AT+MAV	LCV	2AT	3AT+ MAV
Candidate Traffic %	20.0%	16.3%	19.4%	15.8%	14.7%	17.2%
Diversion %	75%	76%	77%	75%	76%	77%
Traffic Diversion %	**15.0%**	**12.4%**	**15.0%**	**11.9%**	**11.2%**	**13.3%**

Status of LA and award of the various packages of express highway: As per the available secondary sources, the expressway project is making progress in terms of land acquisition. The total land required for the project spans 7,689 hectares, with the Maharashtra and Karnataka governments acquiring 2,233 hectares and 5,456 hectares, respectively.

The Maharashtra State Road Development Corporation (MSRDC) has committed to expediting the land acquisition process and appointed Nodal officers by district collectors to oversee and streamline the land acquisition procedure.

As per the recent update, the two state governments are awaiting for the Centre's approval to begin the land acquisition process, and the clearance is expected by September 2023, and once obtained, NHAI will collaborate with MSRDC to expedite land acquisition. The project does not pass through protected areas. Project packaging information is not available.

As per the latest updation in Oct. '24, land acquisition for the expressway is underway. NHAI's target year for the expressway completion is 2028. Considering the longer development period for expressways in India, especially the land acquisition stage, it may not be appropriate to adopt its operational year as 2028. Hence, two options were analyzed, i.e. (1) Expressway would be operational in the concession period of PSRDCL and (2) Expressway development would be delayed and operational beyond the concession period of PSRDCL (no impact on PSRDCL traffic). In option (1), it is assumed that the Expressway would be operational by 2030-31 and the diversion from the project road will commence from the same year.

5.1.2 Impact assessment of Other Proposed Expressways in the Region

Impact assessment of other proposed expressways is summarized in Table 5.4.

Table 5-4: Impact Assessment of Other Proposed Expressways on Project Road Traffic

No.	Proposed Expressway	Impact Assessment
1.	**Surat – Nashik- Solapur-Chennai Expressway**: It is of 1,220 km length and will be the second longest expressway in India. The Expressway will pass through Gujarat, Maharashtra, Karnataka, Telangana, Andhra Pradesh, and Tamil Nadu, connecting Surat in Gujarat with Chennai in Tamil nadu and is expected to reduce the road distance between Surat and Chennai around 330 km. The Surat – Solapur part (via Nashik – Ahmednagar) will be 564 km long, the Solapur - Chennai part (via Kurnool) is of 707 km length. The project is envisioned as a combination of two partially access-controlled economic corridors i.e Chennai to Solapur and Solapur to Surat. • Surat – Solapur Economic Corridor (513 km): This greenfield section is being developed under Bharatmala Pariyojana Phase-2	The expressway would be a shorter route for the interstate traffic plying Gujarat and Tamil nadu. Since the share of this traffic is very less on the project road (LCV- 0.2%, 2AT-0.8% and 3AT/MAV-1.6%), no major impact is anticipated on the project road due to the expressway.

No.	Proposed Expressway	Impact Assessment
	program with a December 2026 deadline. It forms the northern section of the expressway and consists of two sub sections: Surat – Ahmednagar (288 km) and Ahmednagar – Solapur – Akkalkot – MH/KN Border (225.25 km) Solapur – Chennai Economic Corridor (707 km): It forms the southern section of the expressway and is a mix of brownfield-upgrade & greenfield segments, being developed under Bharatmala Pariyojana Phase-2 program with a December 2025 deadline.	
2.	**Pune – Nashik Industrial Expressway**: It is an expressway proposed by MSRDC with a length of 180 km and with 6 lane access-controlled highway with a route alignment in western Maharashtra. The expressway will connect MSRDC's proposed Pune Ring Road project (near Chimbali) and Shinde (on NH-60). It will be connected to the proposed Samruddhi Mahamarg (Mumbai – Nagpur Expressway). The expressway is expected to reduce travel time between Nashik and Pune to 2 hours from the current 4-5 hour journey. In October 2022, MSRDC invited tenders for the preparation of a Feasibility Study Report, Detailed Project Report (DPR) and assistance in land acquisition. But the report is not finallysed yet.	It will act as a feeder road to the project road from the northern region of Maharashtra and hence a positive impact is expected. Since the project is in preliminary stage, its completion may happen during the end stage of the concession period. Hence not considered in this study.
3.	**Mumbai – Nagpur Expressway:** The 701 km expressway also known as Samruddhi Mahamarg, is being developed by MSRDC is under construction 6 lane access-controlled road connecting Nagpur to Thane District. This greenfield project was first announced in 2015 and land acquisition began in July 2017. The first phase (502 km) connecting Nagpur – Shirdi, was opened and inaugurated on December 11, 2022.	The expressway connects the districts in North Maharashtra and no major impact is expected on the project road traffic.

No.	Proposed Expressway	Impact Assessment
4.	**Delhi–Mumbai Expressway**: The 1,350 km Expressway is an 8 lane access-controlled road with a route connecting DND in Delhi with JNPT in Mumbai. The expressway is partially operational between Sohna and Dausa (246 km) and other sections are under development. The entire expressway is expected to be opened by 2024.	This expressway along with Mumbai- Pune expressway and Pune- Solapur (NH 65) and Solapur- Karnataka (NH 52) would be economic for the North (Delhi and northern states) and Karnataka traffic plying currently through NH 44 (Srinagar- Kanyakumari highway, via; Nagpur). Hence, it is possible that some traffic on NH 44 may use the project road in the future and is advantageous.

Conclusion: There are several expressways proposed/under development through Maharashtra, having positive/negative impact on the project road. The proposed Pune- Bangalore Expressway is expected to have significant negative impact, if it is operational during the concession period of PSRDCL (till 2036-37). NHAI's target year for its completion is 2028. Considering the longer development period for expressways in India, especially the land acquisition stage, it is assumed that the Expressway would be operational only by 2030-31 (estimated diversion percentage is LCV- 15.0% & 11.9%, 2AT- 12.4% &11.2% and 3AT+MAV- 15.0% &13.3% respectively for TP1 and TP2). In case, the expressway development is delayed and is operational beyond the concession period of PSRDCL, no impact is expected in this project.

6 GROWTH RATE ESTIMATION & TRAFFIC PROJECTION

6.1 Background

Projection of traffic along the project stretch for the horizon period requires an understanding of the key drivers to the traffic. These include demographic variables such as population, per-capita income and economic variables such as GDP/NSDP for project influence region. Projection of these drivers needs to be developed within a framework that ensures internal consistency.

Maharashtra is the main influencing state of traffic on the project road. Broad review of the socio-economic characteristics of this state is discussed in Chapter 2. The growth trends for these socio-economic variables and assessment of traffic growth rates and forecasts that is necessary for the revenue estimation is detailed in this Chapter.

6.2 Traffic Growth Trend in the Past

The project road (four lane) is operational from 2014 and the traffic growth trend observed in the past for the two TPs, based on the toll traffic data, is discussed in Chapter 3. The summary of average daily traffic growth on the project road is provided in Table 6.1. Car/Taxi/Mini LGV had the highest growth in all vehicle groups, followed by bus and 2 ATs. The growth potential of MAV is high in the region, but the MAV showed a moderate growth as the group includes 3 axle trucks also, which generally has a moderate growth when compared to MAVs with higher axles. 2 ATs have very high growth when compared to roads with similar nature, may be due the clubbing of LCV-3 Axle (which has high growth potential in the region) in Fast-Tag vehicle categorisation.

Table 6-1: Traffic Growth trend in the Past

	Car/Taxi/ Mini LGV	LCV/Mini Bus	Bus	2 AT	3 AT+ MAV	Total
2014-15	2954	767	402	678	2864	7663
2015-16	3493	835	378	691	3221	8617
2016-17	3686	824	356	764	3391	9018
2017-18	6614	1204	883	902	3797	13399
2018-19	6921	1238	878	862	3882	13780
2019-20	7006	1064	863	1007	3894	13834
2020-21	6308	898	445	1055	3453	12158
2021-22	8052	842	546	1318	3905	14662
2022-23	10134	828	924	1505	4241	17632
CAGR (2014-15 to 2022-23)	**17%**	**1%**	**11%**	**10%**	**5%**	**11%**
CAGR (2018-19 to 2022-23)	**10%**	**-10%**	**1%**	**15%**	**2%**	**6%**

It could be concluded that the project road will perform better in the future also due to its geographical location and regional connectivity.

6.3 Growth Rate Estimation

Traffic growth rates to be used for forecasting toll traffic on the project road is estimated by adopting the Elasticity of Transport Demand method which is the most commonly adopted technique for traffic forecast on highways in India. This method establishes the relationship between traffic growth trend on the corridor / vehicle registration of the influencing states, with the state income (NSDP), population and per capita income (PCI) of the project road influencing states.

The steps involved in growth rate estimation are as follows:

- Identifying the Project influence area (PIA) for the project road from OD data, this has impact on the traffic growth of project road.
- Analyze the past socio-economic performance of the project influence area and assess the economic growth rates of influence area in the future.
- Estimating the base elasticity of traffic growth which provides the relationship between the traffic growth and the socio-economic growth of the influence area
- Projection of future elasticity for various modes from the base elasticity
- Estimating the traffic growth based on the future elasticity values and the respective socio-economic growth perspective of the traffic influencing regions

Single growth rate is recommended for both TPs as they are part of the same corridor and continuous in nature.

6.3.1 Economic Profile of Major Traffic Influencing Areas/States

The two toll plazas are located on a continuous stretch of the highway and with same growth potential. Hence common growth rates are recommended for both TPs.

The major influencing states on the traffic on the project road are Maharashtra, Gujarat, Karnataka, Telangana and Tamil Nadu. The influence is given in Table 6.2.

Table 6-2: Major Traffic Influencing States

	Car/Taxi/ Mini LGV	LCV/Mini Bus	Bus	2 AT	3 AT+ MAV
Maharashtra	96.1%	81.6%	91.3%	71.1%	67.9%
Gujarat	0.2%	1.4%	0.0%	2.6%	3.5%
Karnataka	1.8%	6.3%	5.2%	6.5%	8.0%
Tamil Nadu,	0.2%	1.8%	0.0%	4.9%	5.6%
Telangana	1.4%	7.4%	3.0%	10.5%	11.1%
Total	**99.7%**	**98.5%**	**99.5%**	**95.6%**	**96.1%**

Note: Combined influence of TP1 and TP2

One of the advantages of the project corridor is that its influencing states are the main contributors of India economy. The trend of economic growth of the influencing states are summarised in Table 6.3. The economic performance of these states are stable and comparable with India GDP. The average annual growth of NSDP/GDP for the period 2015-2020 is low due to the COVID impact in the year 2020-21.

Table 6-3: NSDP Growth Trend

	Maharashtra	Gujarat	Karnataka	Tamil Nadu	Telangana	India
2015-16	14,52,513	7,74,775	7,49,952	8,62,437	4,16,892	1,13,69,493
2016-17	15,96,121	8,43,930	8,51,394	9,22,084	4,55,731	1,23,08,193
2017-18	16,61,065	9,46,511	9,15,642	10,00,308	4,98,145	1,31,44,582
2018-19	17,28,578	10,34,399	9,74,815	10,71,602	5,44,441	1,39,92,914
2019-20	17,82,903	11,10,179	10,30,357	10,99,402	5,72,736	1,45,15,958
2020-21	16,53,094	10,99,259	10,26,875	10,94,471	5,37,753	1,35,58,473
CAGR (2015-16 to 2020-21)	**2.6%**	**7.2%**	**6.5%**	**4.9%**	**5.2%**	**3.7%**
CAGR (2015-16 to 2019-20)	**5.3%**	**9.4%**	**8.3%**	**6.3%**	**8.3%**	**6.3%**

Source: NSDP: Directorate of Economics & Statistics of respective State Governments, RBI Unit: Rs. In Crores, At constant price and 2011-12 base

6.3.2 Estimation of Base Elasticity & Projection

Elasticity is derived by developing econometric models through regressing NSDP with past traffic data for the years between 2015-16 and 2020-21 (NSDP available up to 2020-21 for all states). The elasticity values are provided in Table 6.4.

Table 6-4: Estimated Elasticity Values

	Elasticity	R^2
2 AT	1.75	0.82
3 AT+MAV	0.94	0.89
LCV/Mini Bus	1.62	0.68
Car/Taxi/Mini LGV	3.98	0.88
Bus	9.71	0.88

The following time periods, till the end of concession period (up to 2036-37).

- Base period adopted: 2015 -16 to 2020-21
- 2021-22 to 2025-26
- 2026-27 to 2030-31
- Beyond 2030-31

Elasticities are projected based on the above values and their growth perspective with respect to the project road.

Generally, the spread of economic development induces changes in the spatial distribution of activities and corresponding changes in transport demand elasticity. Accordingly, the elasticity, for both freight and passenger traffic would tend to decline over time, despite growth in economic parameters. Future modal shift, new vehicle technologies, etc. also will affect transport demand elasticity in the future. Hence it is necessary to moderate the elasticity and to arrive at the growth rates within realistic limits for the future years, by making reasonable assumptions on the various influencing parameters of growth.

It is assumed that LCV/Mini bus category will have nominal growth in the future and bus traffic growth depend on other factors also (such as political, regional, etc.), lower elasticity is adopted accordingly. The adopted values and the projection are given in Table 6.5.

Table 6-5: Adopted Elasticity & Projections

Vehicle Type	Period (2015-16 to 2020-21)	Period (2021-22 to 2025-26)	Period (2026-27 to 2030-31)	Period Beyond 2030-31
2 AT	1.75	1.49	1.27	1.08
3AT+ MAV	0.94	0.80	0.68	0.58
LCV/Mini Bus	0.50*	0.43	0.36	0.31
Car/Taxi/Mini LGV	1.50*	1.28	1.08	0.92
Bus	0.50*	0.43	0.36	0.31

**- Adopted values*

6.3.3 Projection of Socioeconomic Variable

The socio-economic variable projections (weighted NSDP for all modes) were made based on the past performance of the influencing areas and the recent economic changes post COVID.

Due to the absence of realistic data on the future economy of the influencing states, methodology adopted is to forecast the socioeconomic growth (NSDP) of the influencing states by relating with GDP growth forecast. For this, a factor was derived considering the annual growth of GDP for the base period (2015-16 to 2020-21) and every five-year period in the future (Refer Table 7.7). This factor was multiplied with the base period combined NSDP growth rate for each vehicle type, resulting in the future growth rate of NSDP of the influence region for the subsequent time periods.

Impact of COVID in Indian Economy: The base period of growth rate analysis is 2015-2020. This includes the period of first wave of COVID (year 2020-21), which had a lower growth rate of economy. The GDP growth from 2021-22 onwards will capture the regain of economy post COVID. The published GDP growth for 2021-22 to 2022-23 is adopted and for the year 2022-23 and 2023-24 , the GDP figures are based on the latest update from govt. authorities/multilateral agencies are employed in the analysis. These figures will reflect the economic growth after the COVID period.

The GDP of India had expanded 8.7% in 2021-22 after a decline (-ve growth) of 6.6% in the previous year (due to COVID impact). As per the latest update by World Bank, the overall growth of India's economy during 2022-23 is estimated to be 6.9%. The economic survey, by Ministry of Finance, Govt. of India, projects a GDP growth of 6.5 per cent in 2023-24. It is assumed that India's growth continues to be resilient in the future and growth rates assumed accordingly. Based on the above predictions /assumptions, the GDP forecast is made and is given below in Table 6.6.

Table 6-6: Projected Growth of GDP and the Relating Factor

Period	Average Annual GR %	GDP factor for the future five-year periods w.r.t the base Period of (2015-16 to 2020-21)
2015-16 to 2020-21*	3.7%	-
2021-22*	8.7%	188%
2022-23**	6.9%	
2023-24**	6.5%	
2024-25**	6.5%	
2025-26**	6.5%	
2026-27 to 2030-31**	6.0%	161%
>2030-31**	5.5%	147%

*Note: *-Actual values, Source: RBI, World Bank, ** Predictions/Assumptions*

Based on the above, the socioeconomic variables have been projected for the influencing areas and are presented in Table 6.7.

Table 6-7: Projection of Socio-economic Variable for various Vehicle Types

Vehicle Type	Period (2015-16 to 2020-21)	Period (2021-22 to 2025-26)	Period (2026-27 to 2030-31)	Period (beyond 2030-31)
2 axle Truck	3.1%	5.8%	4.9%	4.5%
3 AT+ MAV	3.2%	5.9%	5.1%	4.7%
LCV/Mini Bus	2.9%	5.5%	4.7%	4.3%
Car/Taxi/Mini LGV	2.7%	5.0%	4.3%	4.0%
Bus	2.8%	5.2%	4.4%	4.1%

Note: First year for traffic projection: 2024-25

6.3.4 Recommended Growth Rates

The projected elasticity and the corresponding socio-economic sector projection has been multiplied to estimate the growth rates for different horizon periods using the relationship given below.

Tgr = (NSDPgr) x E

Where, Tgr – Traffic growth rate for mode

NSDPgr – growth rate of NSDP

E – Elasticity value for mode

The recommended growth-rates for the project road are presented below in Table 6.8.

Table 6-8: Recommended Growth Rates

Vehicle Type	Period (2024-25 to 2025-26)	Period (2026-27 to 2030-31)	Period (beyond 2030-31)
2 AT	8.6%	6.2%	4.9%
3 AT + MAV	4.7%	3.4%	2.7%
LCV/Mini Bus	2.3%	1.7%	1.3%
Car/Taxi/Mini LGV	6.4%	4.7%	3.6%
Bus	2.2%	1.6%	1.3%

6.3.5 Growth rates under Optimistic and Pessimistic Scenarios

Growth rates under Optimistic scenario assumes an additional one percent per annum higher growth of GDP than in Normal scenario, while pessimistic scenario consider a decline of GDP growth @ 1% per annum. The growth rates predicted under these two scenarios are given below in Table 6.9 and in Table 6.10.

Table 6-9: Growth Rates under Optimistic Scenario

Vehicle Type	Period (2024-25 to 2025-26)	Period (2026-27 to 2030-31)	Period (beyond 2030-31)
2 AT	9.3%	7.3%	5.7%
3 AT+ MAV	5.1%	4.0%	3.2%
LCV/Mini Bus	2.5%	2.0%	1.6%
Car/Taxi/Mini LGV	7.0%	5.5%	4.3%
Bus	2.4%	1.9%	1.5%

Table 6-10: Growth Rates under Pessimistic Scenario

Vehicle Type	Period (2024-25 to 2025-26)	Period (2026-27 to 2030-31)	Period (beyond 2030-31)
2 AT	7.8%	5.2%	4.0%
3 AT+ MAV	4.3%	2.9%	2.2%
LCV/Mini Bus	2.1%	1.4%	1.1%
Car/Taxi/Mini LGV	5.9%	3.9%	3.0%
Bus	2.0%	1.3%	1.0%

6.4 Traffic Projection

The base year AADT (including the exempted vehicles) has been projected according to the recommended growth rates for the remaining concession period. The estimated traffic diversion due to the proposed Pune- Bangalore expressway is considered from 2030-31.

	TP1			TP2		
	LCV	2 AT	3AT+MAV	LCV	2AT	3AT+ MAV
Traffic Diversion %	15.0%	12.4%	15.0%	11.9%	11.2%	13.3%

Traffic projection is presented from Table 6.11 to Table 6.16 for the two options of the expressway operational during the concession period and the expressway construction delayed respectively under Normal, Optimistic and Pessimistic Scenarios.

Table 6-11: Projected AADT-Normal Scenario (Pune Bangalore Expressway Operational during the Concession Period)

	Normal Scenario															
Year	TP1								TP2

7 TOLL REVENUE FORECAST

Toll revenue is projected for the remaining years of concession period (upto 2036-37) based on the base year AADT and recommended growth rates. Toll/User fee is projected for the future years as per the provisions of the Concession Agreement.

7.1 Input for Toll Revenue Estimation

7.1.1 Base Year AADT

The AADT of tollable vehicles (toll paying traffic) for the base year (2024-25), estimated from the toll traffic, at the toll plaza locations is shown in Table 7.1. This AADT excludes the share of exempted vehicles as provided in Section 3.1.6.

Table 7-1: Base Year Tollable AADT (2024-25)

	TP1	TP2
Car/Taxi/Mini LGV	7,978	12,337
LCV/Mini bus	708	916
Bus	781	1,314
2 AT	1,733	1,983
3 AT+ MAV	4,672	5,333
OSV	14	15
Total Veh.	**15,887**	**21,899**
Total PCU.	**37,693**	**47,691**

Note: Toll paying traffic, excluding toll exempted vehicles

7.1.2 Toll Policy

As per Schedule R of Concession agreement, the toll rates for computation of toll revenues to be adopted from the National Highways Fee (Determination of rates and collection) Rules, 2008. Various trip categories are described below:

- **Single Entry:** Mechanical vehicle who makes use of the section of National Highway, permanent bridge, bypass or tunnel for one way journey once in 24 hrs.
- **Return trip:** Driver or person who is in charge of a mechanical vehicle who makes use of the section of National Highway, permanent bridge, bypass or tunnel for two one-way journeys within a 24 hrs. (from the time of payment) may opt for the return pass.
- **Monthly Local pass for cars:** Person who owns mechanical vehicle, registered for non-commercial purpose and resides within a distance of 20 Km from the toll plaza location is eligible for the local monthly pass.
- **Monthly pass:** Driver, Owner or person who is in charge of a mechanical vehicle who makes use of the toll section frequently during a month, may opt to purchase a monthly pass. Monthly pass amount is fixed as two-third of the fee for 50 single journeys in a period of one month.

7.1.3 Toll Ticket Categorisation

Trip categorization adopted in the study is presented in Table 7. 2.

Table 7-2: Trip categorization as per NHAI Toll Policy

Veh Type	Single	Return	Local Monthly Pass/Local Concession	Monthly Pass	Total
TP1					
Car/Taxi/Mini LGV	58.32%	40.22%	1.46%	0.00%	100.00%
LCV/Mini Bus	70.14%	29.85%	0.00%	0.01%	100.00%

7.1.4 Toll Fee Rates

The applicable toll rates are:

Base rate of fee for highway with four lane or more lanes: The rate of fee for use of a section of national highway of four or more lanes shall, for the base year 2007-08 be the product of the length of such section multiplied by the following rates namely:

Type of Vehicle	Base Rate of fee per km (in rupees) (2007-08 rate)
Car, Jeep, Van or Light Motor Vehicle	0.65
Light Commercial Vehicle, Light Goods Vehicle or Mini Bus	1.05
Bus or Truck (Two Axles)	2.20
Three Axle Trucks	2.40
Heavy Construction Machinery (HCM) or Earth Moving Equipment (EME) or Multi Axle Vehicle (MAV) (four to six axles)	3.45
Oversized vehicles (seven or more axles)	4.20

These rates are applicable for one way (single) journey.

- **Daily/Return Pass & Monthly Pass Rate:**

Amount Payable	Maximum number of one-way journeys allowed	Period of Validity
One and half times of the fee for one way journey	Two	Twenty-four hours from the time of payment
Two-third of amount of the fee payable for fifty single journeys	Fifty	One month from date of payment

- **Monthly pass for Local Car Traffic:** The monthly fee for local car traffic (residing within 20 km radius of the toll plaza), at the base rate for the year 2007-2008 is of rupees One hundred and Fifty per calendar month.

The toll amount, by multiplying the above rates with the control length/tollable length of the toll plaza shall be rounded to the nearest five rupees.

7.1.5 Toll Plaza Control lengths

The tollable length/control lengths of the toll plazas as per the Schedule R of the project are presented in Table 7.3.

Table 7-3: Toll Plaza Control Length

Length of Tolling (Km)	TP1	TP2
Length of Tolling (4Lane)	50.65	50.65

Source: Schedule R

7.1.6 Toll Fee Forecasts

Annual Revision of rate of fee: The 2007-08 toll rates have been increased without compounding by three per cent each year with effect from the 1st day of April 2008 and such increased rate has been deemed to be the base rate for the subsequent years.

The applicable base rates have been revised annually with effect from April 1st, each year to reflect the increase in wholesale price index between the week ending on January 6, 2007 and the week ending on or immediately after January 1 of the year in which sub revision is undertaken but such revision shall be restricted for forty percent of the increase in wholesale price index. The past WPI values has been adopted from Source: http://eaindustry.nic.in/default.htm/ Ministry of Commerce and Industry, Govt. of India. The formula for determining the applicable rate of fee is as follows:

$$\text{Applicable rate of fee} = \text{Base rate} + \text{base rate X} \left\{ \frac{\text{WPIA - WPIB}}{\text{WPIB}} \right\} \text{X } 0.4$$

The annual fluctuation of WPI in the past (refer Table given below). The average annual growth observed in the past is about 5%. Hence, a similar trend is considered for the future also. However, actual WPI growth observed last three to four years data in some year muted and in some years in

double digits growth. The value recommended for 2025 is 3.5%, for 2026/ 2027/2028 is 6.5% and thereafter 5%.

Applicable Year	WPI Actual Index (2004-05 series)	Annual Inflation %
2007-08	112.2	-
2008-09	116.7	4.0
2009-10	124.5	6.7
2010-11	133.4	7.1
2011-12	146.0	9.4
2012-13	157.3	7.7
2013-14	168.6	7.2
2014-15	179.6	6.5
2015-16	178.7	-0.5
2016-17	176.8	-1.1
2017-18	183.3	3.7
2018-19	189.9	3.6
2019-20	196.4	3.4
2020-21	201.8	2.8
2021-22	205.8	2.0
2022-23	235.2	14.3
2023-24	247.0	5.02
2024-25	249.1	0.86
Average (2007- 2024)		**4.9**

7.1.7 Toll Fee Projection

Based on the above, the toll fee has been projected for various type of toll category till the end of concession period. The toll amount applicable for 2023-24 (with effect from 01.04.2023) at the toll plazas are presented in Table 7.4. The revision in toll rate for the year 2024-25 is implemented after completion of last phase of Lok Sabha election (2024) and the toll rate revision is made effective from 3rd June 2024.

Table 7-4: Toll amount applicable from 01.04.2023 to 21.05.2024 (In INR)

Category of Vehicles	Fee for Single Journey	Fee for Return Journey within a day	Fee for Monthly Pass for 50 single journeys in a month
TP 1			
Car, Jeep, Van or Light Motor Vehicle	70	110	2,415
Light Commercial Vehicle, Light Goods Vehicle or Mini Bus	115	175	3,900
Bus or Truck (Two Axle)	245	370	8,170
Heavy Construction Machinery or Earth Moving Equipment or Multi Axle Vehicle (Three to Six Axle)	385	575	12,815
Oversized Vehicle (Seven or More Axle)	470	700	15,600
TP 2			
Car, Jeep, Van or Light Motor Vehicle	70	110	2,415
Light Commercial Vehicle, Light Goods Vehicle or Mini Bus	115	175	3,900

Category of Vehicles	Fee for Single Journey	Fee for Return Journey within a day	Fee for Monthly Pass for 50 single journeys in a month
Bus or Truck (Two Axle)	245	370	8,170
Heavy Construction Machinery or Earth Moving Equipment or Multi Axle Vehicle (Three to Six Axle)	385	575	12,815
Oversized Vehicle (Seven or More Axle)	470	700	15,600

Note: The rates for monthly local pass applicable for local personal non-commercial vehicle (car) resides with in a distance of 20 Km from the toll plaza shall be Rs.330/-

Table 7.5 provides the applicable toll amount from 22.05 2024 to 31.03.3025.

Table 7-5: Toll Amount applicable for 2024-25 from 22.05 2024 to 31.03.3025 (in INR)

Category of Vehicles	Fee for Single Journey	Fee for Return Journey within a day	Fee for Monthly Pass for 50 single journeys in a month
TP 1			
Car, Jeep, Van or Light Motor Vehicle	75	110	2,475
Light Commercial Vehicle, Light Goods Vehicle or Mini Bus	120	180	4,000
Bus or Truck (Two Axle)	250	375	8,380
Heavy Construction Machinery or Earth Moving Equipment or Multi Axle Vehicle (Three to Six Axle)	395	590	13,140
Oversized Vehicle (Seven or More Axle)	480	720	16,000
TP 2			
Car, Jeep, Van or Light Motor Vehicle	75	110	2,475
Light Commercial Vehicle, Light Goods Vehicle or Mini Bus	120	180	4,000
Bus or Truck (Two Axle)	250	375	8,380
Heavy Construction Machinery or Earth Moving Equipment or Multi Axle Vehicle (Three to Six Axle)	395	590	13,140
Oversized Vehicle (Seven or More Axle)	480	720	16,000

Note: The rates for monthly local pass applicable for local personal non-commercial vehicle (car) resides with in a distance of 20 Km from the toll plaza shall be Rs.340/-

7.1.8 Growth Rates

Summary of recommended growth rates/normal scenario are given in Table 7.6.

Table 7-6: Recommended Growth Rates

Vehicle Type	Period (2024-25 to 2025-26)	Period (2026-27 to 2030-31)	Period (beyond 2030-31)
2 AT	8.6%	6.2%	4.9%
3 AT + MAV	4.7%	3.4%	2.7%
LCV/Mini Bus	2.3%	1.7%	1.3%
Car/Taxi/Mini LGV	6.4%	4.7%	3.6%
Bus	2.2%	1.6%	1.3%

7.2 Projected Toll Revenue

7.2.1 Annual Toll Revenue

The toll revenue is computed for the remaining years of the concession period. Toll collection is assumed for 365 days in a year. The revision in toll rate for the year 2024-25 is applied from 3rd June 2024 due to the Lok Sabha election (2024). The estimated traffic diversion due to the proposed Pune-Bangalore expressway is assumed from 2030-31 and the total revenue summary is presented in the Table 7.7 for the two TPs.

	TP1			TP2		
	LCV	2 AT	3AT+MAV	LCV	2AT	3AT+ MAV
Traffic Diversion %	15.0%	12.4%	15.0%	11.9%	11.2%	13.3%

Table 7.8 present the toll revenue summary in case the expressway development is delayed (expressway completion beyond the concession period).

Table 7-7: Projected Annual Toll Revenue Summary (Pune Bangalore Expressway Operational during the Concession Period)

	Normal Scenario (Rs. In Crores)			Optimistic Scenario (Rs. In Crores)			Pessimistic Scenario (Rs. In Crores)		
Year	TP1	TP2	Total	TP1	TP2	Total	TP1	TP2	Total
2024-25	108.23	131.44	239.67	108.23	131.44	239.67	108.23	131.44	239.67

CHAPTER 1. EXECUTIVE SUMMARY

1.1 PROJECT BACKGROUND

The Barwa-Adda-Panagarah section of NH-2, which includes the Panagarh bypass, was awarded to IL&FS on a Design-Build-Finance-Operate-Transfer (DBFOT) basis. Table 1-1 presents the important milestones achieved during the project.

Table 1.1: Project Milestones

S.No	Particulars	Description
1	Date of Signing of Concession agreement	08/05/2013
2	Concession period start	01/04/2014
3	Concession Period	20 years
4	Concession period End	31/03/2034
5	Scheduled date of transfer of	31/03/2034
6	Extension period	4.3years (4years due to short fall in target traffic + 90days due to Covid19)

The Project is presently undergoing maintenance by Concessionaire Barwa Adda Expressway Limited. The Concessionaire has appointed M/s. HBS Infra Engineers India Pvt Ltd to carry out an independent assessment of traffic forecasting and toll revenue estimation for the project.

National Highway 19 (NH 19) in India was previously known as the Delhi-Kolkata Road and is one of the busiest national highways in the country. Following the renumbering of national highways, the Delhi to Agra route is now designated as National Highway 44, while the Agra to Kolkata route is numbered as National Highway 19 (old NH-2). NH 19 forms a significant portion of the historic Grand Trunk Road.

NH 19 begins in Agra, at its junction with NH-44, and connects Kanpur, Allahabad, and Varanasi in Uttar Pradesh, as well as Mohania, Sasaram, and Aurangabad in Bihar. It also passes through Barhi, Bagodar, and Gobindpur in Jharkhand, and Asansol and Palsit in West Bengal before terminating at its junction with NH-16 near Kolkata.

1.2 PROJECT DESCRIPTION

- Project Start: Starting at Km 398+240 near kisan chowk Barwadda
- Project End: Ending at Km 521+120 near Panagarh
- Project road passes through major towns of Gobindpur, Dhanbad, Asansol, Durgapur and Panagarah
- Project road passes through Jharkhand and West Bengal state.
- NH-Crossings the project road:NH-18, NH-419 near Gobindpur, NH-419 near Kulti, NH-14 near Raniganj.

  Toll plazas: 2 Nos -Beliyad Toll plaza at Km 438+500 and Banskopa Toll plaza at Km 507+000.

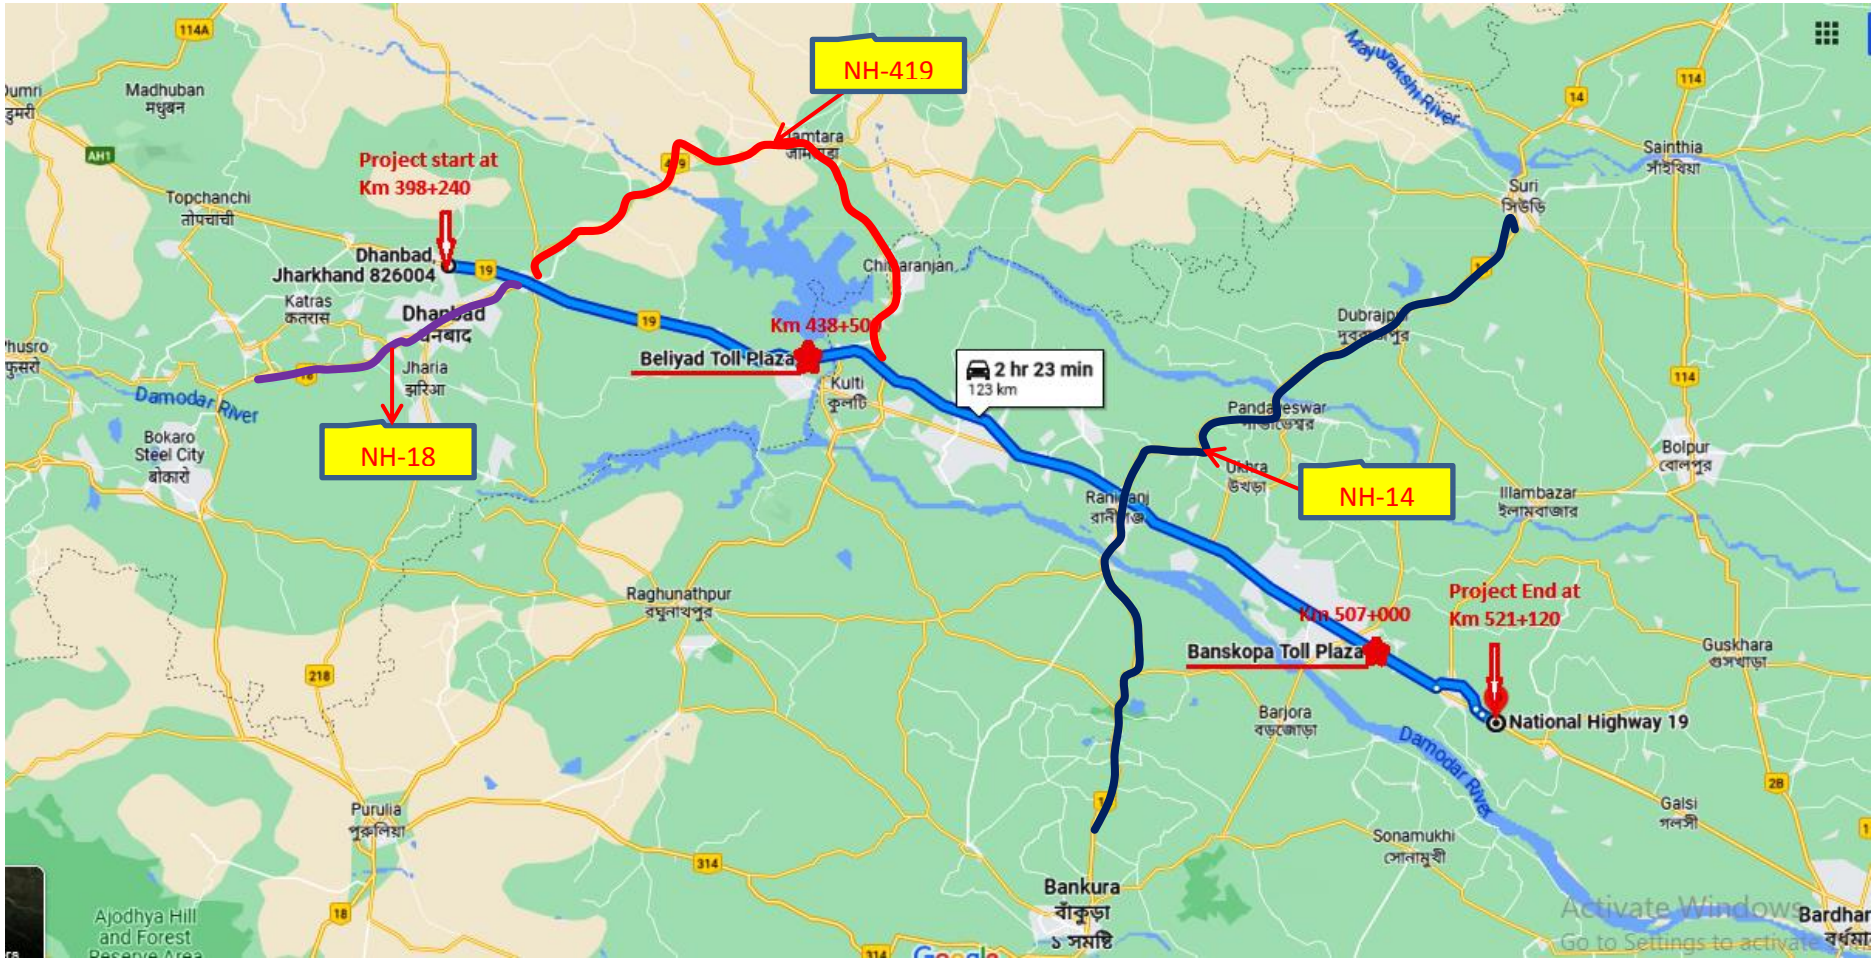

Figure 1.1: Index Map showing Proposed alignment and National Highways crossing along the project

1.3 DATA COLLECTION

1.3.1. Data Collection from the Client

Past data about the project corridor was sourced from the client. This includes historic toll traffic and revenue data for the two toll plazas on the project road to study the past traffic and revenue trends, seasonal variations in traffic, and other observations related to the data. Past traffic trends in year-on-year growth, month-on-month growth, etc., were derived, which will also help understand the travel pattern for passenger and goods vehicles. The given traffic data includes the toll categories like single (through) journey, local pass, monthly pass, and exempted traffic. Exempt category traffic falls under the list of vehicles where these vehicles are exempted from paying the user fee.

1.3.2. Data Collection from the field

Origin – Destination Surveys using Roadside Interviews method was conducted for 48 hrs. (both directions) at two toll plazas locations on random sampling basis covering reasonably adequate sample for each tollable vehicle category. Origin-Destination (OD) surveys studies were carried out to find the

a) Possible traffic diversion on the proposed road
b) To assess the future growth rates of traffic based on traffic influence areas and social economic characteristics.
c) OD Matrices, commodity composition, regional distribution of traffic, lead distribution of vehicles and trip contribution

1.4 TRAFFIC AND REVENUE FORECAST ASSUMPTIONS

1.4.1. Traffic

Traffic forecasting for a project road was conducted by considering the past trend in growth and analyzing the prospects of the project influence area. The elasticity approach for growth rate estimation was used for long-term traffic forecasting. The methodology used for the study included the following steps:

- The influencing factors obtained from OD (origin-destination) surveys were utilized to derive the key socio-economic parameters of the Project Influence Area (PIA) for the historical trend.
- Regression analysis was conducted for various combinations of the dependent and independent parameters to test the significance of their relation.
- Future traffic forecasting was done using elasticity approach, which considers the elasticity of transport demand and probable pattern of future growth of the economy.
- Elasticity values for each mode is estimated using the past vehicle registration data, past traffic trend and AADT-tonnage with the growth of PCI, GSDP and Moderated elasticity values chosen for the analysis based on previous trends in socioeconomic variables.

1.4.2. Revenue

- Toll revenue projections or forecasting will be calculated based on the projected traffic and projected toll rates.
- Toll rates by vehicle and toll category depends on the tollable length and structure cost(length), wholesale price index (WPI) and the base rates which are applicable by vehicle category are according to the NH fee notification for the project.

- Toll fee shall be computed based on the base rate fixed by NHAI and is revised annually as per the formula provided by NHAI in Schedule R of the Concession agreement which is according to the National highway fee rules 2008.
- Fee applicable shall be the rate multiplied by the length of the highway section and structure cost for which toll is to be collected.
- The amount of fee and the revision thereof effective from 1st April every year shall be calculated as follows

$$\text{Applicable rate of fee} = \text{Base Rate} + \text{Base Rate X} \left\{\frac{\text{WPI A} - \text{WPIB}}{\text{WPI A}}\right\} * 0.4$$

where

WPI-A means the Wholesale Price Index of the week ending on or after 1st January immediately Preceding the date of revision under these rules.

WPI-B means the Wholesale Price Index of the week ending on 6th January 2007 i.e., 208.7

The actual fees to be charged shall be rounded off to the nearest Five rupees.

- CSO (Central statistical organization) provided linking factors for both the 2004-05 and 2011-12 series to arrive at the WPI values for the 1993-94 series to reach the year of toll fee.
- Ministry of Statistics and Programme Implementation (MoSPI) reported the linking factor as 1.561, but the recent communication on fee revision mentions the linking factors can be adopted as 1.641.

1.5 Traffic and Toll revenue projections

The Tables 1.2 and 1.3 show the forecasted traffic at both Toll plazas for each base year. These projections consider the impact of any road network improvements and land developments that may take until the end of the Concession period, including any possible extension periods as outlined in the concession agreement.

Toll revenue projections are based on the projected future traffic, toll fees by vehicle and toll category, and trip rates. Traffic numbers are estimated by financial years, such as FY24-25, FY25-26, etc. Toll rates are revised annually **on April 1st**. Toll revenues are projected by the financial year until the end of the concession period, considering any possible extensions that relate to the targeted traffic PCU **until March 2039** (FY38-39). The toll revenue projections are based on the effective case, considering all network improvements and land developments. Table 1.4 summarize the projected toll revenue.

Table 1.2: Traffic forecast (AADT) at Beliyad Toll plaza

CHAPTER 2. TRAFFIC SURVEYS AND ANALYSIS

2.1 PREAMBLE

The traffic volume data was collected through TMS system/Toll records at two toll plazas - Beliyad and Banskopa - and was received from the client for analysis. Additionally, to assess the future growth rates of traffic and possible diversions due to alternative roads, Origin-Destination (OD) surveys were conducted in the month of November, 2023 and same was utilized.

2.2 OD SURVEY LOCATIONS

Origin Destination (OD) surveys were conducted at two plaza locations. The location and schedule of traffic surveys are presented in **Table 2.1.**

Table 2.1: OD Surveys Schedule

S. No.	Type of Survey	Location (Km)	Description	Dates of Survey
1	2 days - Origin-Destination Survey	438+500	Beliyad Toll plaza	15.11.2023 to 16.11.2023
2	2 days - Origin-Destination Survey	507+000	Banskopa Toll plaza	15.11.2023 to 16.11.2023

The Index map of the project road and survey's location is presented in the Figure 2.1 and few photographs OD surveys at survey location is shown in Photo 2.1.

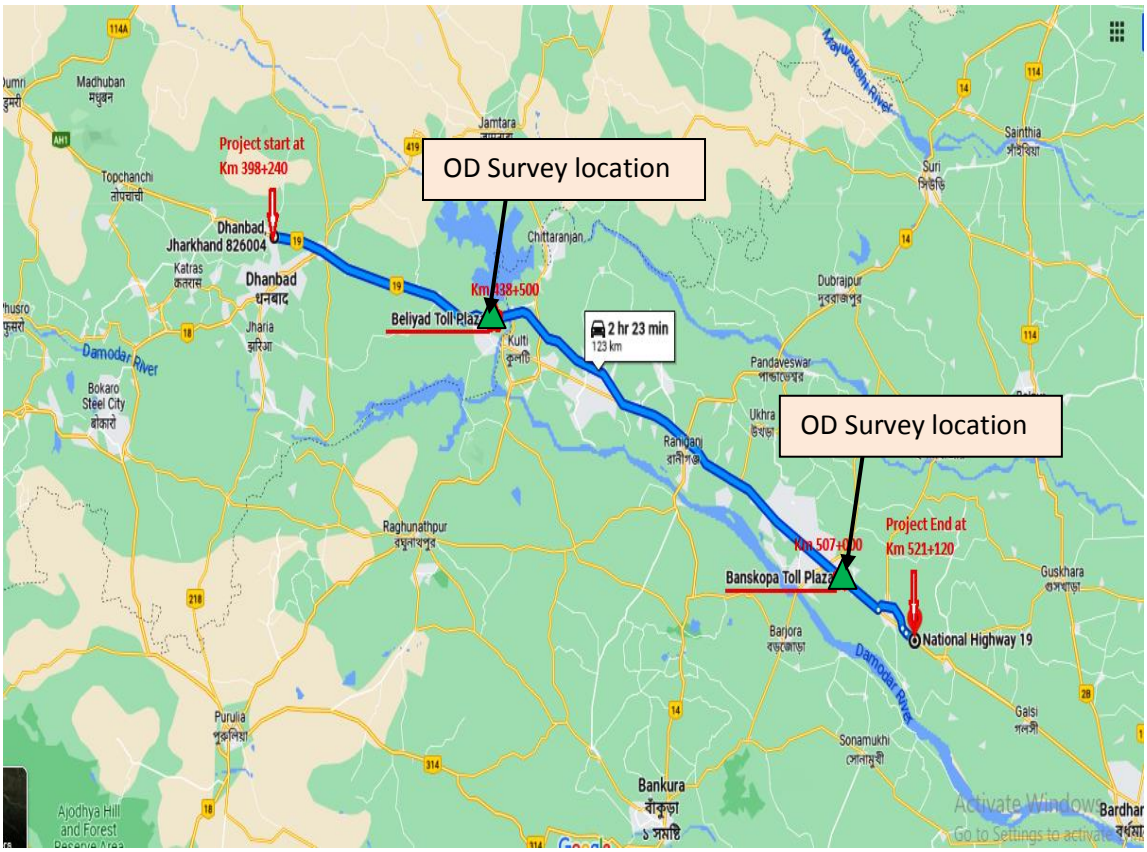

Figure 2.1: Index Map showing Proposed alignment and traffic survey locations

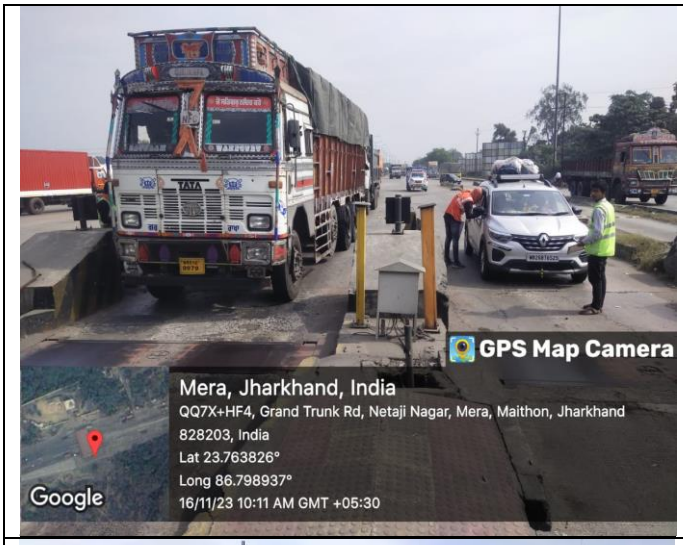
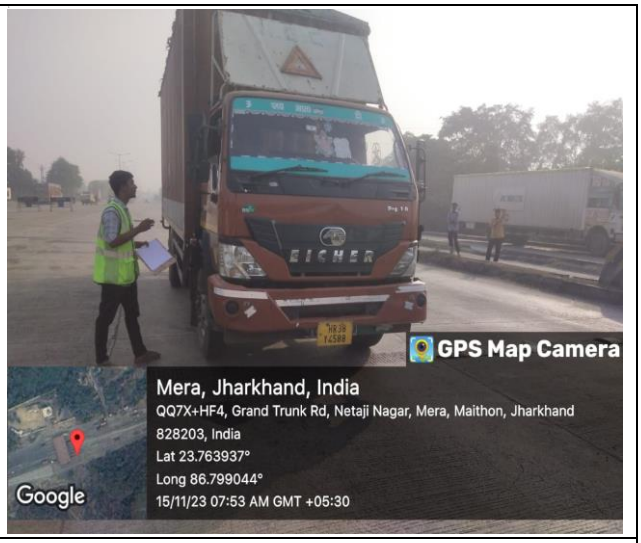
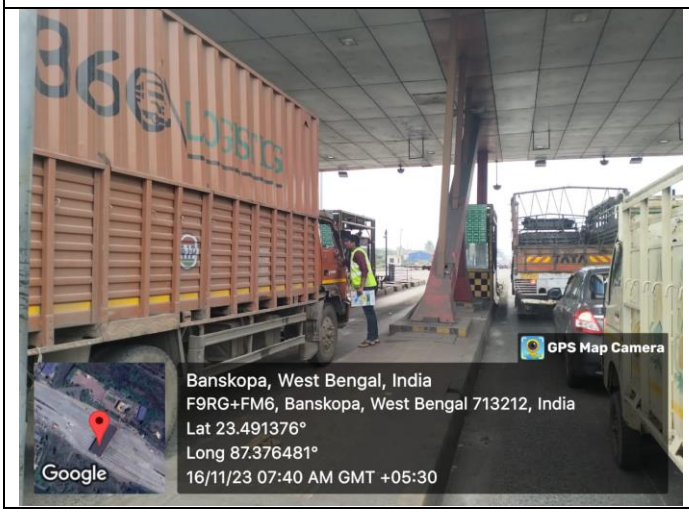
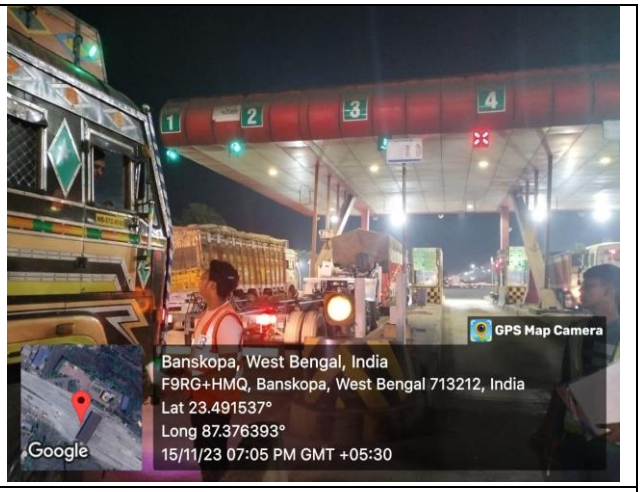




Origin-Destination (OD) survey at Beliyad Toll plaza





Origin-Destination (OD) survey at Banskopa Toll plaza

Photo 2.1: Few Photographs of OD survey at survey locations

2.3 VEHICLE CLASSIFICATION SYSTEM

The vehicle classification used in the survey along with their Passenger Car Units (PCU) values, as suggested in **IRC: 64 -1990**, are presented in **Table 2.2**. The PCU factor given in Table 2.2 is used to convert all tollable vehicles into number of PCU's.

Table 2.2: Vehicle Classification and PCU Factors

Vehicle type	PCU factor
Car/Light Motor Vehicle (LMV)	1
Light Commercial Vehicle (LCV)/Mini bus	1.5
Bus	3
Truck 2 Axle (2-AT)	3
Truck 3 Axle (3-AT)	3
Multi Axle Vehicle (MAV)	4.5
Heavy Construction Machinery (HCM)	4.5
Oversized	4.5

2.3.1. Annual Average Daily Traffic (AADT) for FY 2024-2025 (First 6 months)

Using sourced data, the AADT was calculated for first six months of FY 2024-25, that is from April 2024 to September 2024.The ADT and PCU values at two toll plaza locations is presented in **Table 2.3.**

Table 2.3: Summary of Annual Average Daily Traffic (AADT) for FY 2024-2025 (First 6 months) at two Toll Plaza locations

Vehicle type	Beliyad Toll plaza		Banskopa Toll plaza	
	Vehicles	PCU	Vehicles	PCU
Car/LMV	4309	4309	9926	9926
LCV/Mini bus	308	462	764	1146
Bus	271	814	817	2450
Truck 2 Axle	1139	3416	2202	6606

Vehicle type	Beliyad Toll plaza		Banskopa Toll plaza	
	Vehicles	PCU	Vehicles	PCU
Truck 3 Axle	947	2841	1811	5433
MAV	3513	15808	6554	29493
HCM	0	1	1	5
Oversized	2	8	1	5
Total	**10489**	**27660**	**22075**	**55062**

2.3.2. Annual Average Daily Traffic (AADT) for FY 2024-2025

The traffic on any road usually varies throughout the year, depending on the socio-economic activities in the areas it passes through. Therefore, to obtain a more realistic picture of the traffic on a project road, it is essential to assess the seasonal variations and estimate the Annual Average Daily Traffic (AADT).

Using sourced data, the AADT was calculated for first six months of FY 2024-25, that is from April 2024 to September 2024. The seasonal factor was applied to arrive at the AADT for the next six months in the FY 2024-25. The seasonal correction was obtained by dividing the average traffic of each vehicle mode in the last six months of the FY with the average traffic of each vehicle in the first six months of traffic data in the same FY. This exercise was carried out based on the data availability, and average values were obtained. Table 2.4 and Table 2.5 presents the seasonal correction factors obtained at 2 toll plazas in last two FYs.

Table 2.4: Seasonal Correction factors at Beliyad Toll plaza

FY	Car/LMV	LCV/Mini bus	Bus	Truck 2 Axle	Truck 3 Axle	MAV	HCM	Oversized
2022-2023	1.08	0.91	1.10	0.97	0.97	1.12	1.19	1.15
2023-2024	1.11	1.04	1.10	1.04	0.98	1.09	1.53	0.84
Average	**1.10**	**0.97**	**1.10**	**1.00**	**0.98**	**1.11**	**1.36**	**0.99**

Table 2.5: Seasonal Correction factors at Banskopa Toll plaza

FY	Car/LMV	LCV/Mini bus	Bus	Truck 2 Axle	Truck 3 Axle	MAV	HCM	Oversized
2022-2023	1.03	0.92	1.03	0.95	0.83	1.14	0.95	1.04
2023-2024	1.06	1.02	1.06	1.02	0.94	1.05	1.05	1.19
Average	**1.05**	**0.97**	**1.05**	**0.99**	**0.89**	**1.10**	**1.00**	**1.11**

The average value of 2 toll plazas was considered for calculating the traffic in the last six months of FY 2024-25. Table 2.6 shows the adopted seasonal correction factors. Table 2.7 shows the AADT for the base year (FY 2024-2025) at two toll plaza locations.

Table 2.6: Adopted Seasonal Correction factors at two toll plazas

FY	Car/LMV	LCV/Mini bus	Bus	Truck 2 Axle	Truck 3 Axle	MAV	HCM	Oversized
Beliyad Toll plaza	1.10	0.97	1.10	1.00	0.98	1.11	1.36	0.99
Banskopa Tollplaza	1.05	0.97	1.05	0.99	0.89	1.10	1.00	1.11
Average	**1.07**	**0.97**	**1.07**	**1.00**	**0.93**	**1.10**	**1.18**	**1.05**

Table 2.7: Summary of Annual Average Daily Traffic (AADT) for FY 2024-2025 at two Toll Plaza locations

Vehicle type	Beliyad Toll plaza		Banskopa Toll plaza	
	Vehicles	PCU	Vehicles	PCU
Car/LMV	4474	4474	10305	10305

Traffic composition in terms of vehicles at two toll plaza locations is shown in **Figure 2.2 to Figure 2.3.**

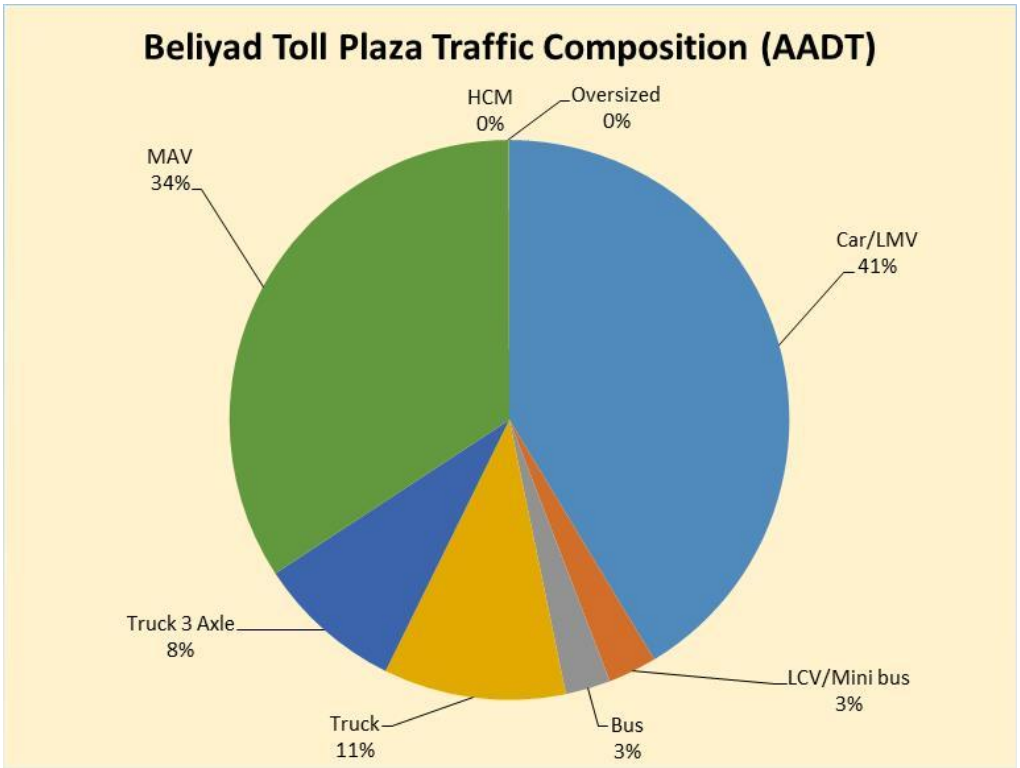

Figure 2.2: Traffic Composition at Beliyad Toll plaza

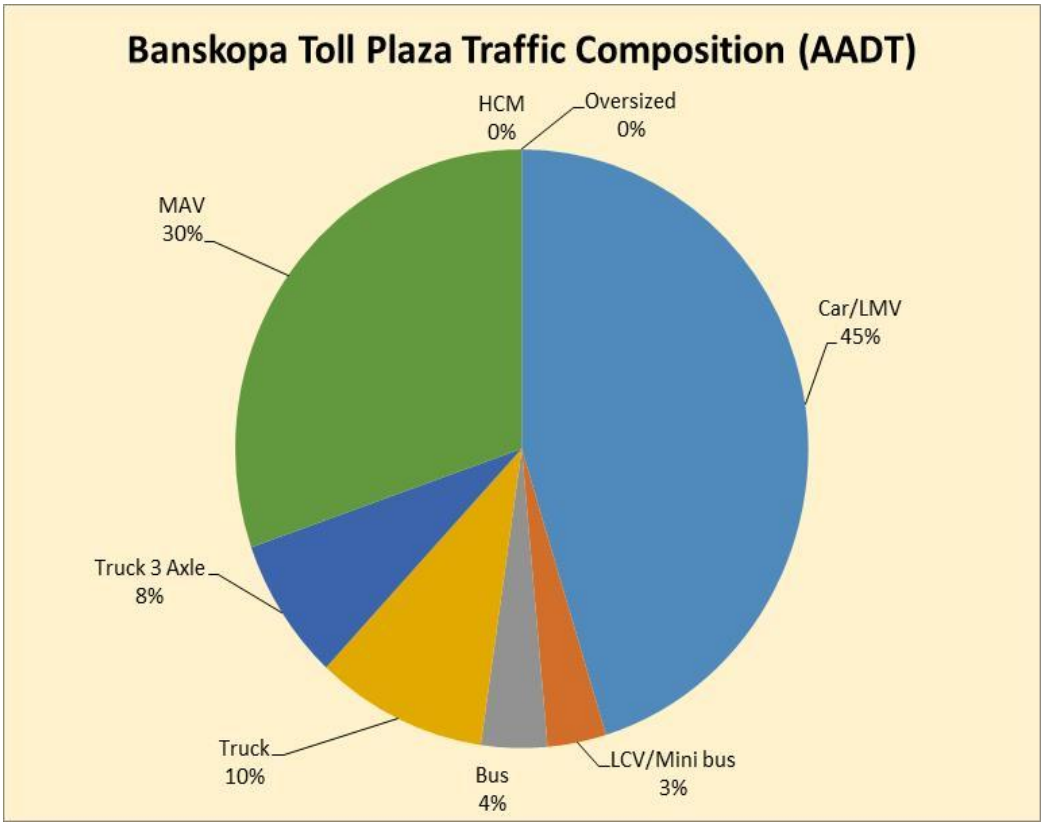

Figure 2.3: Traffic Composition at Banskopa Toll plaza

2.4 TRAFFIC GROWTH RATES

Traffic growth rates were calculated using two different methodologies. The first method was based on past traffic trends data of the toll plaza, while the second method was based on OD surveys, influence factors, socio-economic indicators, and growth elasticity as per IRC:108.

2.5 METHODOLOGY 1 -GROWTH RATES AS PER PAST TRAFFIC TRENDS

The traffic trends were analyzed using data obtained from toll operations for passenger and goods traffic. Toll collection started at Beliyad Toll Plaza in 2014 and Banskopa Toll Plaza in 2017. The available data at each plaza was compiled, and annualized traffic growth rates were calculated for each mode. These growth rates are presented in **Tables 2.8 and 2.9.**

Table 2.8: Compounded Annual Growth Rate (CAGR) growth rates at Beliyad Toll plaza

Year	Car/LMV	LCV/Mini bus	Bus	Truck 2 Axle	Truck 3 Axle	MAV	AADT	Considered Toll operation days for calculation of AADT as per data
2014-2015	1951	656	428	573	2510	957	7075	361
2015-2016	2231	667	219	429	2283	1690	7519	366
2016-2017	2055	499	221	606	1774	1985	7140	342

2024-2025	9926	764	817	2202	1811	6554	22073	183
CAGR (%)	**3.03**	**-7.47**	**5.33**	**-1.57**	**-8.60**	**10.58**	**2.13**	

According to Table 2.9, the growth rates of LCVs, 2A trucks, and 3A trucks at Banskopa Toll Plaza were negative, while cars, buses, and MAVs reported positive growth. However, the AADT showed a positive growth rate of 2.13%.

2.6 METHODOLOGY 2 - GROWTH RATES AS PER OD SURVEYS

2.6.1. Travel Pattern (Origin – Destination Surveys)

In order to understand the travel demand pattern in the region, Origin and Destination (O-D) Surveys were carried out for two days in both Toll Plaza locations as mentioned in Table 2.1. The OD surveys were carried out by roadside interview method as described in IRC: 102-1988. Both passenger and commercial vehicles plying on the project road were stopped on a random sampling basis and interviewed. Trained enumerators under the supervision of senior engineers of M/s. HBS Infra Engineers India Pvt. Ltd., have collected the trip characteristics using the survey forms designed for this purpose. The OD survey elicited characteristics like origin, destination, frequency, purpose and commodity etc. both for passenger and goods vehicles. The information collected during roadside interviews was analysed to obtain the trip distribution based on a zoning system suitably designed in the study.

2.6.2. Sample Size and Expansion Factors

The vehicles during the OD surveys were interviewed on a random sample basis. Based on the sample size of different categories of vehicles interviewed during the OD survey, expansion factors were calculated for the expansion of OD matrices generated from the sample data to make the assessment of the travel patterns of the vehicles plying on the project road. **Table 2.10 and Table 2.11** show the ADT for two days, sample size (both in absolute numbers and in percentage terms) and expansion factors at two toll plaza locations.

Table 2.10: Sample Size and Expansion Factors at Beliyad Toll plaza

Vehicle Type	Sample Size (Nos)	ADT for two days	Sample Size (%)	Expansion Factor
Car/Jeep	1943	8902	21.83	4.58
Bus	74	616	12.01	8.32
LCV	164	618	26.54	3.77
2-AT	337	2336	14.43	6.93
3-AT	391	2028	19.28	5.19
MAV	1703	7446	22.87	4.37

Table 2.11: Sample Size and Expansion Factors at Banskopa Toll plaza

Vehicle Type	Sample Size (Nos)	ADT for two days	Sample Size (%)	Expansion Factor
Car/Jeep	2385	20726	11.51	8.69

3-AT	766	4068	18.83	5.31
MAV	1621	13706	11.83	8.46

2.6.3. Zoning System

The zoning system considered for the present study is given in **Table 2.12.**

Table 2.12: List of Zones for the Project

Zone No	Name of the Zone	
1	Barwadda	Project circle
2	Gobindpur	
3	Ratanpur	
4	Ramchandrapur	
5	Nirsa,Mugma	
6	Mera,Maithan, Beliyad	
7	Borira	
8	Asansol	
9	Raniganj	
10	Kajora	

Zone No	Name of the Zone	
11	Durgapur	
12	Banskopa	
13	Rajbandh	
14	Birudiha	
15	Panagarh	
16	Kolkatta	West Bengal
17	Paschim Bardhaman district	
18	Purba Bardhaman district	
19	Bankura district	
20	Malda, Uttar Dinajpur, Dakshin Dinajpur and Murshidabad- Districts	
21	Birbhum and Hooghly-Districts	
22	Alipurduar, Cooch Behar, Darjeeling, Jalpaiguri and Kalimpong - Districts	
23	Howrah, Kolkata, Nadia, North 24 Parganas (Uttar 24 Parganas) and South 24 Parganas (Dakshin 24 Parganas) - Districts	
24	Jhargram, Purulia, Purba Medinipur and Paschim Medinipur - Districts	
25	Ranchi	Jharkhand
26	Hazaribagh - District	
27	Bokaro - District	
28	Dhanbad - District	
29	Palamu, Garhwa and Latehar - Districts	
30	Chatra, Hazaribagh, Koderma, Giridih and Ramgarh - Districts	
31	Lohardaga, Gumla, Simdega, Ranchi and Khunti - Districts	
32	West Singhbhum, Saraikela-Kharsawan and East Singhbhum - Districts	
33	Jamtara, Deoghar, Dumka, Pakur, Godda and Sahebganj - Districts	
34	Aurangabad	Bihar
35	Bihar	
36	Varanasi	Uttar Pradesh
37	Uttar Pradesh	
38	Uttarakhand	
39	Delhi, Haryana	
40	Odisha	
41	Chhattisgarh	
42	Arunachal Pradesh, Assam, Manipur, Meghalaya, Mizoram, Nagaland, Sikkim and Tripura	North Eastern states
43	Maharashtra, Madhya Pradesh, Gujarat, Rajasthan, Himachal Pradesh and Punjab	North India
44	Andhra Pradesh, Telangana, Karnataka, Tamil Nadu, Kerala and Goa	South India
45	Jammu and Kashmir	
46	Rest of India	

2.6.4. Influence Factors

Different vehicles interact in different degrees with the different zones depending on their purpose, commodity transported, frequency of travel etc. Vehicle category-wise zone-wise influence factors are established for interpretation of OD patterns at the surveyed location by using the following formula:

$$IF = [(P_i + A_i) \times 100] / (\sum (P_i + A_i))$$

Where,

IF = Influence Factor

P_i = Total trips produced in Zone i

A_i = Total trips attracted to Zone i

Mode wise traffic influence at survey location is given in the **Table 2.13 and Table 2.14.**

Table 2.13: Mode wise Traffic Influence areas based on data collected at Beliyad Toll plaza

Regions / Zones	Car (%)	Bus (%)	LCV (%)	2-AT (%)	3-AT (%)	MAV (%)
Project Circle	29.77	27.03	24.70	19.58	19.44	12.65

Detailed O – D analysis to arrive the Mode – wise influence areas at survey location is presented in ***Annexure 2.1.***

2.7 COMMODITY GROUPS AND ANALYSIS

The different commodities recorded during the O - D survey have been classified into 20 categories as presented in **Table 2.15**. Due consideration has been given to include a possible commodity and to categorize them into homogeneous groups.

Table 2.15: Classification of commodities

Code	Commodity type
1	Automobiles/Spare parts
2	Chemical/Medicines

Code	Commodity type
3	Parcels/Couriers
4	Construction materials
5	Fruits/Vegetables
6	Groceries/Perishable products
7	Food grains/Agricultural products
8	Gas
9	Electrical/Electronics
10	Petroleum products
11	Plastic/Plastic products
12	Marbles/Tiles
13	Iron/Iron products
14	Textile/products
15	Aqua products
16	Animals/Birds
17	Animal feeding
18	Wood/Wood products
19	Coal
19	Other
20	Empty

The commodity movement pattern is analyzed and commodity movement pattern have been presented in **Table 2.16** and **Table 2.17** at two toll plaza locations.

Table 2.16: Commodity movement pattern (%) at Beliyad Toll plaza

Commodity type	Commodity code	LCV	2-AT	3-AT	MAV
Automobiles/Spare parts	1	4.3%	9.2%	6.1%	8.3%

50	100	21.4%	17.0%
100	200	30.4%	29.8%
200	500	25.8%	27.3%
500	1000	4.5%	4.5%
1000	3500	4.0%	4.8%
Total		**100.0%**	**100.0%**

Table 2.21: Lead Distribution of Goods Vehicles (%) at Banskopa Toll plaza

Trip Length (Km)		LCV	2-AT	3-AT	MAV
0	50	11.5%	13.3%	15.0%	11.8%
50	100	13.4%	18.2%	17.8%	17.0%
100	200	31.2%	27.5%	27.4%	26.2%
200	500	21.7%	21.4%	23.4%	23.4%
500	1000	14.6%	13.5%	10.3%	13.4%
1000	3500	7.6%	6.1%	6.1%	8.1%
Total		**100%**	**100%**	**100%**	**100%**

2.7.2. Purpose of Passenger Vehicles

The purpose of passenger vehicles at two toll plaza locations is given in **Table 2.22**.

Table 2.22: Purpose of Passenger Vehicles in %

Location	Work	Business	Education	Social	Shopping	Religious	others
At Beliyad Toll plaza	31.3%	27.3%	9.4%	1.1%	0.3%	13.8%	16.8%
At Banskopa Toll Plaza	36.9%	16.9%	13.4%	9.2%	5.9%	6.2%	11.4%

It is observed from the above that work and business trips constitute highest.

2.8 TRAFFIC GROWTH RATES

Traffic growth rates for the study, to be used subsequently for forecasting traffic on the project road, have been estimated by adopting the "Elasticity of Transport Demand" method which is a proven technique worldwide and is the preferred technique in India. The method relies on the correlation between past trends in traffic growth on the project road / vehicle registration in the state & time series data on population, state income (NSDP) and per capita income (PCI) of project influence area. Regression analysis has been done (using past trends on traffic/vehicle registration and socio-economic indicators for the period 2009-2019), to estimate elasticities for each vehicle type. The elasticity values estimated in this study are then compared with those suggested in "Road Development Plan: 2021" (Indian Road Congress, for Ministry of Road Transport and Highways, GoI) and specific elasticities are recommended for deriving traffic growth rates and traffic forecasts. The projected growth rates worked out for major vehicle groups, namely, car, bus and trucks were moderated based on future economic prospects of the project influence area and the likely future shift among the vehicle categories, like, the probable shift of vehicle ownership from 2-axle trucks to 3-axle trucks and MAVs and 2/3-wheeler market to car, etc., have been taken into account while moderating the elasticity values. This is considered necessary because as the purchasing power increases there will be a shift from low-cost vehicles to high speed, more expensive and more comfortable vehicles. Further, with the road improvement and realization of economics of scale, goods operators will tend to transfer from 2-axle trucks to 3-Axle/Multi-axle vehicles. These market driven forces have been realistically considered in the traffic forecast.

2.8.1. Project Influence Area

Outlining the project influence area is essential for the estimation of traffic growth rates; because the socio-economic indicators of the project influence area influence the traffic growth on the project road. The project influence area has been assessed based on the O-D data. From the O-D analysis results, it is seen that mainly the trips by different modes are being generated from Jharkhand and West Bengal. Trip contribution of various vehicles at two toll plaza locations is presented in **Table 2.23 and Table 2.24.**

Table 2.23: Trip Contribution Observed during the O-D Survey based on data collected at Beliyad Toll plaza

State	Car (%)	Bus (%)	LCV (%)	Trucks (%)
Jharkhand and West Bengal	86.93	83.78	76.22	70.68
Bihar and Uttar Pradesh	8.57	11.49	12.50	12.74
North India (Madhya Pradesh, Maharashtra ,Rajasthan, Gujarat, Delhi, Haryana, Himachal Pradesh and Punjab)	4.14	4.73	10.67	14.41
Rest of India	0.36	0.00	0.61	2.17
Total	**100.00**	**100.00**	**100.00**	**100.00**

Table 2.24: Trip Contribution Observed during the O-D Survey based on data collected at Banskopa Toll plaza

State	Car (%)	Bus (%)	LCV (%)	Trucks (%)

Bihar and Uttar Pradesh	3.10	3.11	8.92	9.48
North India (Madhya Pradesh, Maharashtra ,Rajasthan, Gujarat, Delhi, Haryana, Himachal Pradesh and Punjab)	1.61	1.90	2.55	2.15
Rest of India	0.08	0.17	0.00	0.00
Total	**100.00**	**100.00**	**100.00**	**100.00**

2.8.2. Socio-Economic Indicators and Vehicle Registration

The socio-economic indicators (Net State Domestic Product (NSDP), Population, Per Capita Income (PCI) and vehicle registration by vehicle type (**Table 2.25**) for West Bengal, Jharkhand, Uttar Pradesh, Bihar, Madhya Pradesh, Maharashtra , Rajasthan, Gujarat, Delhi, Haryana, Himachal Pradesh, Punjab and Rest of India have been collected from various secondary sources. These variables were further combined and a weighted average of socio-economic indicators and number of vehicles was derived based on the regional influence obtained from O-D surveys.

Table 2.25: Vehicle Registration Data and Socio-Economic Indicators

West Bengal, Jharkhand							
Year	Total No. of Registered Vehicles				NSDP (Rs. Crores)	Population ('000)	Per Capita Income (Rs.)

Source: NSDP & PCI: Data Book for DC; 5th Dec 2012, Vehicle Data: www. Indiastat.com

From the above, it can be seen that the vehicle registration in the state has a steady growth across and this data has been considered for further examination to estimate travel demand elasticities.

2.8.3. Elasticity of Growth

Passenger traffic demand is a function of growth of population, per capita income and growth of the state. Similarly, state income growth and industrial, mining and agriculture production mostly governs the freight traffic growth. In line with this philosophy, the elasticity of traffic demand has been estimated for car, bus and truck with respect to the past traffic growth. The resultant elasticity values are presented in **Table 2.26** to **Table 2.27.**

Table 2.26: Regression Analysis Results - Elasticity Values at Beliyad Toll plaza

Dependent Variable	Independent Variable	Period	Elasticity Value	R^2	T - Stat.
log of Car	log of PCI	2009-2019	0.858	0.793	5.869
log of Bus	log of NSDP	2009-2019	0.511	0.797	4.550
	log of Population	2009-2019	4.683	0.865	7.584
	log of PCI	2009-2019	0.572	0.755	5.262
log of LCV	log of NSDP	2009-2019	0.727	0.901	9.065
log of Trucks	log of NSDP	2009-2019	0.618	0.826	6.538

Table 2.27: Regression Analysis Results - Elasticity Values at Banskopa Toll plaza

Dependent Variable	Independent Variable	Period	Elasticity Value	R^2	T - Stat.
log of Car	log of PCI	2009-2019	0.836	0.741	5.073
log of Bus	log of NSDP	2009-2019	0.471	0.698	3.458
	log of Population	2009-2019	4.455	0.750	5.194
	log of PCI	2009-2019	0.518	0.669	4.268
log of LCV	log of NSDP	2009-2019	0.812	0.892	8.616
log of Trucks	log of NSDP	2009-2019	0.769	0.812	6.244

The elasticity values shown in the above table reflect a substantial co-relation between economic indicators and traffic growth rates as reflected in their R^2, elasticity and t-stat values. Hence, it is appropriate to consider the growth pattern that has emerged out of the economic model which related the economic growth with the growth in registration of vehicles. In the next stage, considering the various factors such as likely future orientation of the economy, modal shift, user preference, developments in vehicle technology, market driven forces and finally the past performance, the elasticity values are projected for the analysis period.

2.8.4. Moderated Transport Demand Elasticity

The above discussion indicates that the estimated 'e' values, as presented in the above table could not be considered to represent the future growth pattern since they are based on state level data. Also, the future traffic growth pattern is likely to be affected by the following factors:

- Recent economic changes taking place in the project influence region.
- Future modal shift among vehicle types, as well as between various modes.
- Development in vehicle technology.
- Elasticity values considered in the recent road projects in the study region or recommended by multilateral funding institutions for Indian Road/Highway Projects.

With this background, it is necessary to moderate the elasticity values to accommodate the above factors discussed as well as to reflect the PIA development initiatives. The moderated elasticity values considered for future projection is given in **Table 2.28.**

Table 2.28: Recommended Elasticity at Beliyad and Banskopa Tollplaza

Vehicle Type	Recommended Elasticity			
	2023-2027	2028-2032	2033-2037	Beyond 2037
Cars	1.250	1.188	1.128	1.072
Bus	0.800	0.760	0.722	0.686
LCV	0.450	0.428	0.406	0.386
2-AT	0.500	0.475	0.451	0.429
3-AT	0.400	0.380	0.361	0.343
MAV	0.900	0.855	0.812	0.772

2.8.5. Future Economy Prospects

On-going economic liberalization measures, introduced in the nineties, were oriented to make the national economy with a strong competitive base, leading to an open economy system. With the strengths and weakness of the present system, equipped with adequate safeguards, Indian economy has performed fairly well during the liberalization period, as well as before, though the targets were mostly never achieved. The final growth rates have been derived by establishing a relation between the time series data available for Gross Domestic Product (GDP) of the country and Net State Domestic Product (NSDP). The GDP growth rate for the future years is based on the growth rates suggested in *"BRICs and Beyond", Goldman Sachs Publication.*

Considering the following factors such as past performance of the economy against their set targets, recent developments in economic liberalization measures, shift in between sectors, opportunities available in local and global markets etc., future economic growth scenario is formulated for the following time periods.

- 2023 – 2027;
- 2028 – 2032;
- 2033 – 2037;
- Beyond 2037

It was felt that any projection beyond 15 years will have little relevance in current context mainly because there are certain policy variables that could change in long run which cannot be predicted based on the past performance. Hence, the entire period beyond 2037 has been kept as one slab. Future NSDP growth rates are provided in **Table 2.29.**

Table 2.29: Future NSDP Growth Rates (Weighted)

Period	NSDP Growth Rate	
	Beliyad Toll plaza	Banskopa Toll plaza
2023 – 2027	6.869%	6.715%
2028 – 2032	6.557%	6.450%
2033 – 2037	6.487%	6.410%
Beyond 2037	6.357%	6.301%

2.8.6. Population Projections

Though, population projections for the future are available from different sources, however, the state wise population projections prepared by Register General of India (RGI), Census Department, GoI are found to be more appropriate as a result of the scientific methodology followed. Population projections prepared by RGI have been adopted for the present study. The resultant future population growth rates are given in **Table 2.30.**

Table 2.30: Future Population Projections (Weighted)

Period	Future Population	
	Beliyad Toll plaza	Banskopa Toll plaza
2023 – 2027	1.062%	1.045%
2028 – 2032	0.963%	0.984%
2033 – 2037	0.858%	0.880%
Beyond 2037	0.661%	0.623%

2.8.7. Future per Capita Income (PCI)

Based on the data from the above two tables the future growth rate of PCI is summarized as given in **Table 2.31.**

Table 2.31: Future per Capita Income (Weighted)

Period	Future Per capita Income	
	Beliyad Toll plaza	Banskopa Toll plaza
2023 – 2027	5.746%	5.612%
2028 – 2032	5.541%	5.413%
2033 – 2037	5.581%	5.482%
Beyond 2037	5.658%	5.643%

2.8.8. Traffic Growth Rates

Based on the moderated elasticity values and the projected economic/demographic indicators, the future average annual compound traffic growth rates by each vehicle type have been estimated for the present project by using the following formulae and presented in the **Table 2.32** to **Table 2.33.**

For Cars : $T_{gr} = (PCI_{gr}) \times E$

For Bus : T_{gr} = Average of $(NSDP_{gr})$, and $(POP_{gr}) \times E$

For Trucks : $T_{gr} = (NSDP_{gr}) \times E$

Where,

T_{gr} - Traffic Growth Rate
POP_{gr} - Population Growth Rate
PCI_{gr} - Per-Capita Income Growth Rate
$NSDP_{gr}$ - Net State Domestic Product Growth Rate
E - Elasticity Value

Table 2.32: Traffic Growth Rates at Beliyad Toll plaza

CHAPTER 3. DIVERSION TRAFFIC IMPACT

3.1 GENERAL

Diversion traffic represents the proportion of traffic attracted to the improved project road or lost to alternative routes when the improvements are completed. After conducting a thorough reconnaissance study of the project road and the surrounding areas, it has been found that no alternate routes are currently available for traffic to divert from the project road. However, it should be noted that the proposed Varanasi – Ranchi – Kolkata expressway could potentially impact the existing road traffic once it becomes operational.

3.2 VARANASI-RANCHI-KOLKATA EXPRESSWAY

The National Highways Authority of India is currently developing a six-lane greenfield access-controlled expressway that will connect Varanasi and Kolkata, providing fast and direct connectivity between the two cities. The expressway will pass through the states of Uttar Pradesh, Bihar, Jharkhand, and West Bengal, totaling 610.0 km. The project has been divided into 13 civil works contract packages up to the state of Jharkhand, while the remaining stretch up to Kolkata is still in the planning stage. The details of the packages given in Table 3.1.

Table 3.1: List of packages in Varanasi-Ranchi-Kolkata Expressway project

State	Packages	Project details	Length
Uttar Pradesh/ Bihar	Package-1	Junction with NH-19 and Varanasi Ring Road near Rewasa village (Chandauli district) to junction with Chandauli-Chainpur road near Khainti village (Kaimur district, Bihar) (0.000 km-27.000 km)	27.0 Km
Bihar	Package-2	Junction with Chandauli-Chainpur Road near Khainti village to junction with Bhabhua-Adhaura road near Palka village, Kaimur district (27.000 km-54.000 km)	27.0 Km
	Package-3	Junction with Bhabhua-Adhaura road in Bhairopur village to Konki village (Rohtas district) (54.000 km-90.000 km)	36.0 Km
	Package-4	Konki village (Rohtas district) to Junction with NH-119 in Malpura village (90.000 Km-105.300 Km)	15.3 Km
	Package-5	Junction with NH-119 in Malpura village to Lerua village (Aurangabad district), including a 4-lane spur to NH-19 from NH-119 (spur length-6.6 km) (105.300 km to 116.000 km)	10.7 Km
	Package-6	Pachmon village to Anarbansalea village, Aurangabad district (116.000 km to 151.200	35.2 Km
	Package-7	Anarbansalea village to Sagrampur village (Gaya district) (151.200 km to 184.700 km)	33.5 Km
Jharkhand	Package-8	Sonepurbigha village to junction with NH-22 near Chatra, Chatra district (184.700 km to 222.000 km)	37.3 Km
	Package-9	Chatra to junction with NH-100 in Deoria village (Hazaribagh district) (222.000 km to 253.000 km)	31.0 Km
	Package-10	Deoria village to Donoreshan village (Ramgarh district) (253.000 km to 288.600 km)	35.6 Km
	Package-11	Donoreshan village to junction with NH-20 in Bongabar village, Ramgarh district (288.600 km to 325.500 km)	36.9 Km
	Package-12	Junction with NH-20 in Bongabar village to Junction with NH-320 in Lepo village (Bokaro district) (325.500 km to 358.500 km)	33.0 Km
	Package-13	Junction with NH-320 in Lepo village to Kamlapur village (Jharkhand-West Bengal border) (358.500 km to 387.200 km)	28.7 Km
WB	DPR preparation under progress		

The map showing the Varanasi-Ranchi-Kolkata (VRK) expressway till Jharkhand and Barwa Adda Expressway Ltd is shown in Figure 3.1 below.

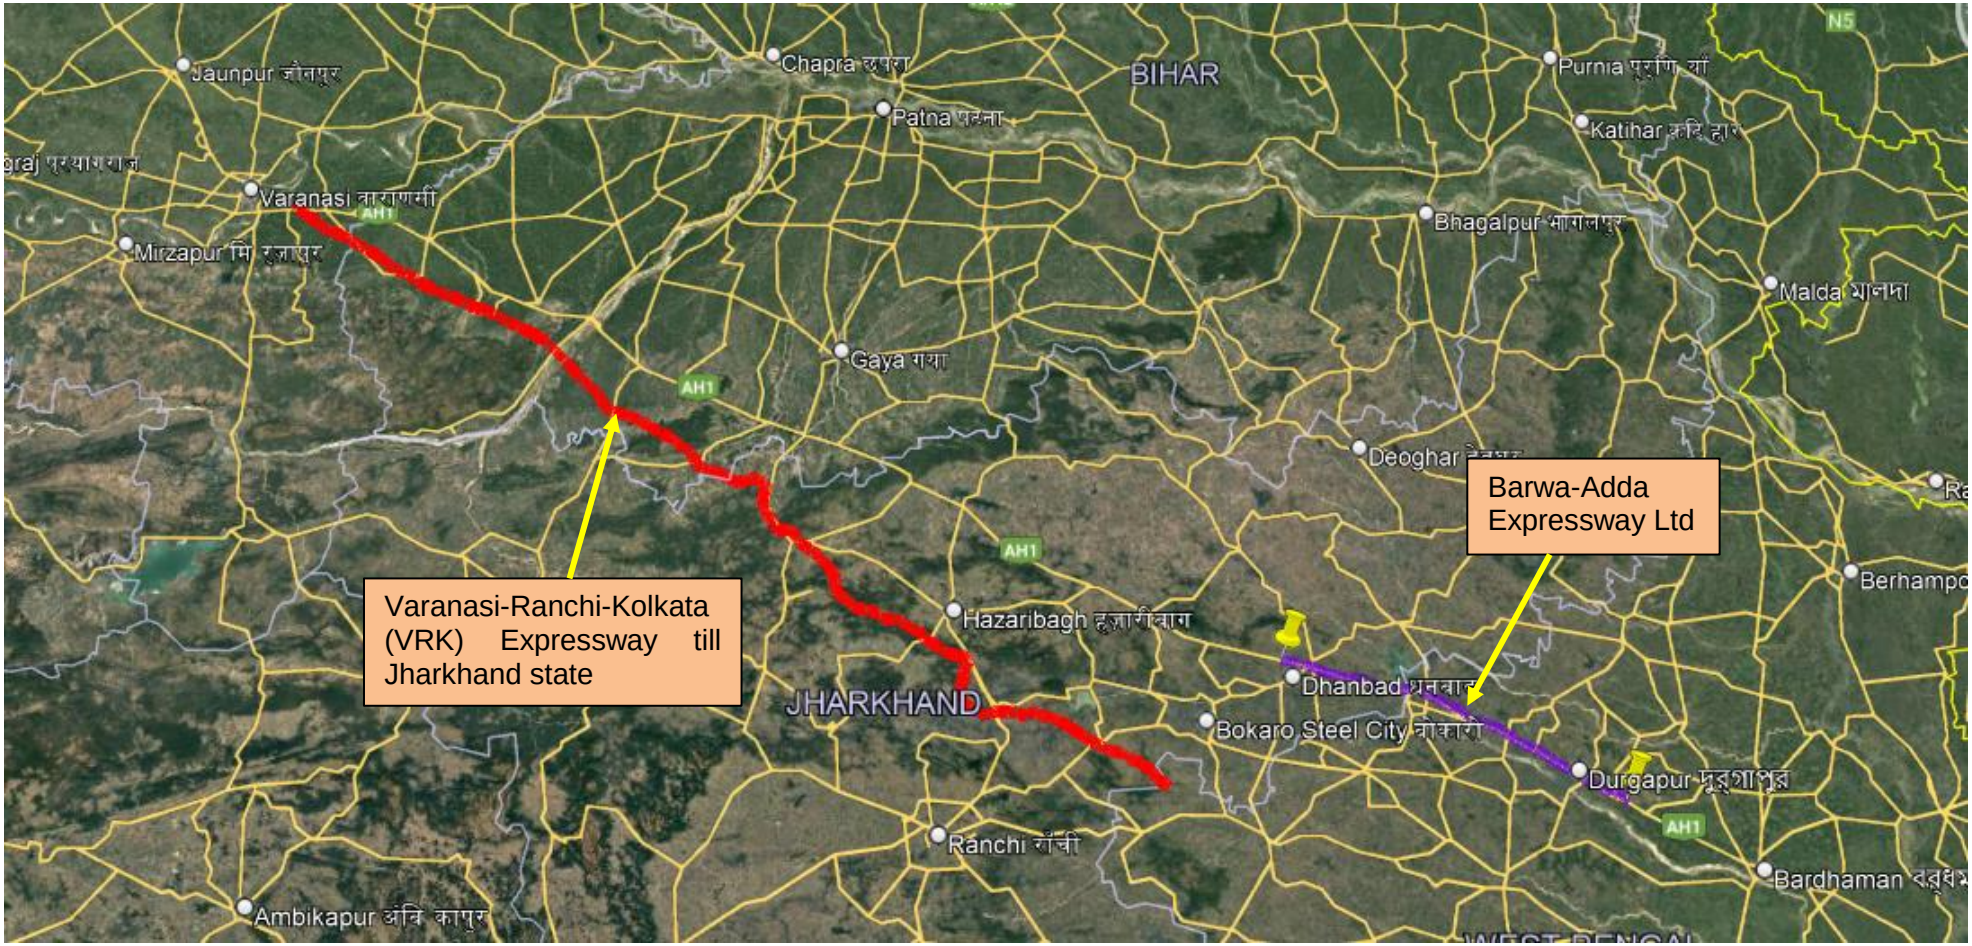

Figure 3.1: Map showing the Varanasi-Ranchi-Kolkata (VRK) expressway till Jharkhand and Barwa Adda Expressway Ltd

3.2.1. DPR Traffic

To conduct traffic surveys on the expressway connecting Varanasi, Ranchi, and Kolkata, the DPR consultant has divided the road into homogeneous sections based on the interchanges provided on National Highways and state highway crossings. These sections are indicated in Table 3.2 and shown in Figure 3.2.

Table 3.2: Homogenous sections for Traffic surveys

Homogeneous Section	Section Name	From (Km)	To (Km)	Length (Km)
Section-1	Varanasi-Mohania	0+000	53+000	53
Section-2	Mohania - Sasaram	53+000	92+000	39
Section-3	Sasaram - Aurangabad	92+000	136+000	44
Section-4	Aurangabad - Sherghati	136+000	172+000	36
Section-5	Sherghati - Chatra	172+000	214+000	42
Section-6	Chatra - Hazaribagh	214+000	253+000	39
Section-7	Hazarribagh – Mandu/Ranchi (NH-	253+000	294+000	41
Section-8	Mandu/Ranchi (NH-20) -	294+000	334+000	40
Section-9	Gola - Bokaro	334+000	380+000	46
Section-10	Bokaro - Purulia	380+000	403+000	23
Section-11	Purulia - Bankura	403+000	450+000	47
Section-12	Bankura – Medinipur	450+000	513+000	63
Section-13	Medinipur (NH-14) - Burdhman Rd	513+000	536+000	23
Section-14	Burdhman Rd - Bagnan	536+000	593+167	57

Sections 11 and 12 running close to the project highway Barwa Adda Expressway Limited.

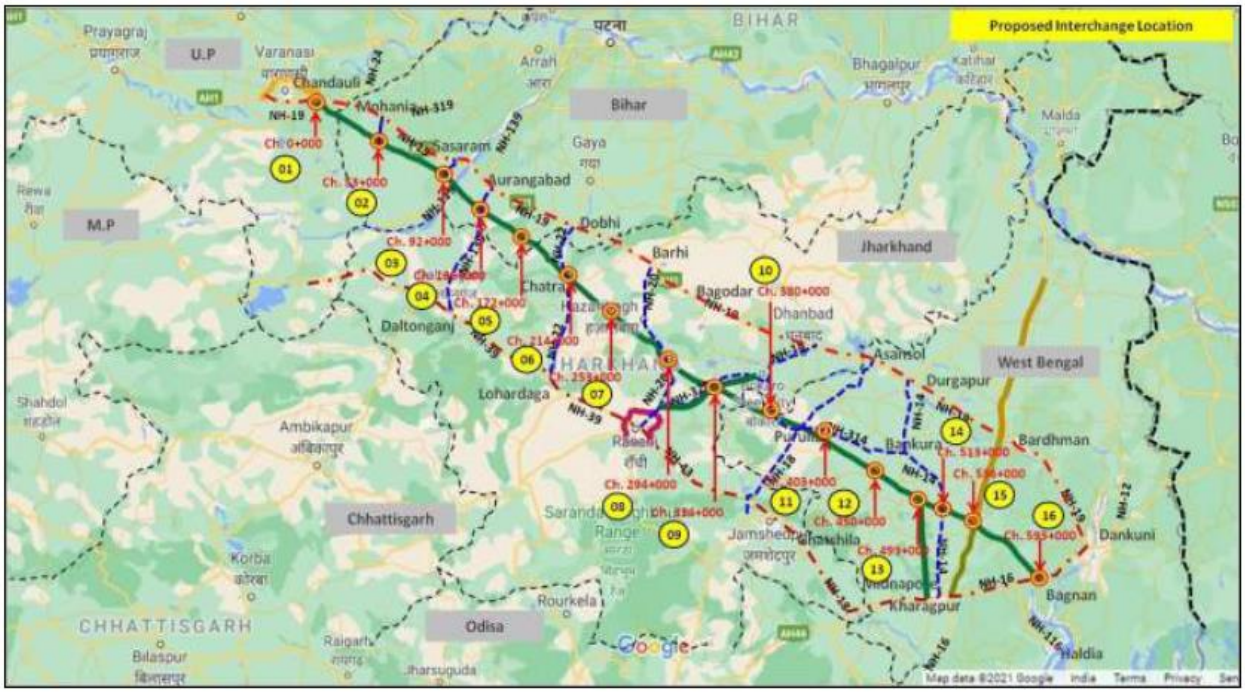

Figure 3.2: Homogeneous sections considered in the DPR

3.2.2. Beliyad Toll plaza traffic

In January 2021, traffic surveys were conducted by DPR consultants at the Beliyad Toll Plaza location to determine the ADT and AADT, which are presented in Table 3.3. Following this, the consultants conducted a network analysis using the total length of the expressway as a unit to forecast future traffic.

Table 3.3: DPR traffic ADT and AADT of Beliyad toll plaza in 2021

Location	Beliyad(NH- 19)	
	ADT	AADT
2 Axle SCV	1357	1411
2Axle LMV	7644	7491
2-Axle LCV	1001	1041
2-Axle Truck or Bus	3283	3415
3-Axle Truck or Bus	2927	3044
MAV	2416	2512
Oversized Vehicle (OSV)	0	0
Cycle Rickshaw	10	10
Earth Moving Equipment	13	13
Bicycle	482	482
2 Wheeler	6200	6076
3 Wheeler	448	466

Tractor with Trailer	55	57
Vehicles	**25840**	**26023**
PCU	**44126**	**45234**

3.2.3. Beliyad Toll plaza diverted traffic

According to the executive summary of the Feasibility Report of VRK Expressway, the DPR consultants have made projections for the expected traffic on each expressway section, considering diverted, developed, and induced traffic. The report provides the final diverted traffic for all homogenous sections, including sections 11 and 12, which pass close to the current project road. Table 3.4 gives the diverted traffic estimated by DPR consultants on sections 11 and 12 based at the Beliyad Toll Plaza for 2021.

Table 3.4: Diverted traffic of section-11 and section-12

Diverted Traffic (Year 2021)									
Year	Cars	Bus	Mini Bus	LCV	2 Axle Trucks	3 Axle Trucks	MAV	Total Vehicles	Total PCUs
Section-11	1891	118	15	813	806	1076	980	5699	13544
Section-12	2087	178	19	895	823	1188	1031	6220	14664

3.2.4. Percentage of traffic diversion at section-11 and section-12 based on Beliyad toll plaza.

The percentage of traffic diversion to the section-11 and section-12 based on traffic collected at Beliyad toll plaza is presented in the Tables 3.5 and 3.6.

Table 3.5: Percentage of Traffic diversion at Section-11 based on Beliyad Toll plaza

Vehicle type	AADT	Diverted Traffic	% of Diversion
Cars/LMV	8902	1891	21.2%
2-Axle LCV	1041	813	78.1%
2-Axle Truck or Bus	3415	924	27.1%
3-Axle Truck or Bus	3044	1076	35.3%
MAV	2512	980	39.0%
Average % of Diversion			**40.2%**

Table 3.6: Percentage of Traffic diversion at Section-12 based on Beliyad Toll plaza

Vehicle type	AADT	Diverted Traffic	% of Diversion
Cars/LMV	8902	2087	23.4%
2-Axle LCV	1041	895	86.0%
2-Axle Truck or Bus	3415	1001	29.3%
3-Axle Truck or Bus	3044	1188	39.0%
MAV	2512	1031	41.0%
Average % of Diversion			**43.8%**

Based on the data presented in Tables 3.5 and 3.6, it can be observed that the average percentage of traffic diversions in two sections is 40.2% and 43.8%, respectively.

3.3 DIVERSION ANALYSIS AS PER OD SURVEYS

3.3.1. Diverted Traffic

Cost ratio diversion curves (Figure 3.3) were used to estimate the diverted traffic from/to the project road. In this approach, traffic likely to be diverted from the project road to the alternate route is estimated using diversion curves, which compute the ratio of perceived costs on the competitive/alternative facilities. The vehicle will shift, if the perceived cost on the alternative road is lower than the project road. The diversion rate is also calculated using the equations, which are presented in the Table 3.7. The proposed and the current project roads are shown in the Figure 3.4.

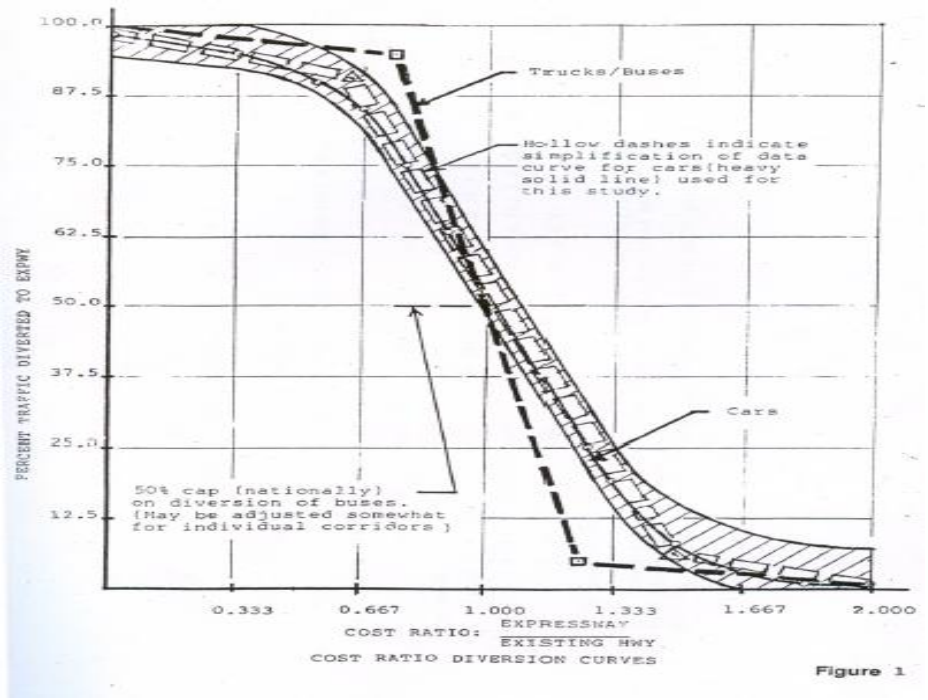

Figure 3.3:Tolling Strategy and Toll Revenue Diversion Curves

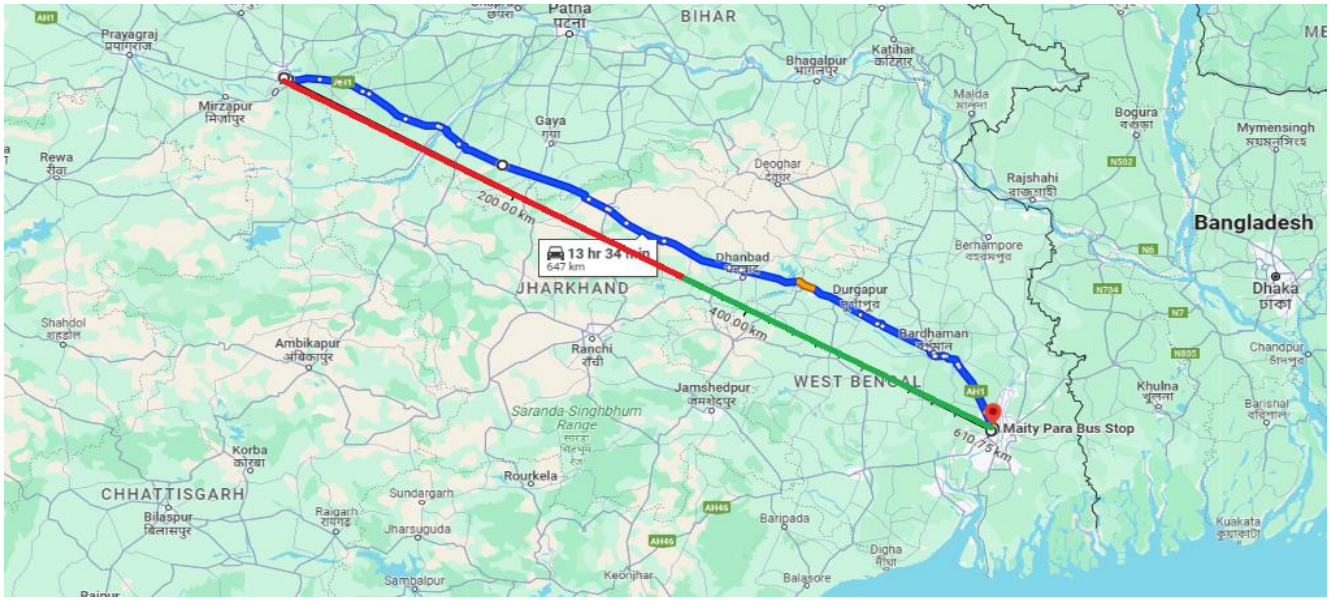

Figure 3.4: Map showing the VRK express way in west Bengal (green line) extended Varanasi (redline) –647 km Vs Existing Road Barwa Adda Expressway extended to Varnanasi and Kolkata (Blue line) – 647 km

Table 3.7: Tolling Strategy and Toll Revenue Diversion Curve Equation

Vehicle	Cost Ratio Interval	Relationship
Car	<0.634 0.64 = CR <1.465 1.465 <=CR <= 2.00	% Div = 98.75 – ((CR/0.634)* 8.125) % Div= 90.625-((CR-0.634)/0.831)*84.375 %Div = 6.25-((CR-1.465)/0.535))*5.25
Truck & Buses	<= 0.75 0.75 <= CR <=1.25	% Div=100-(CR/0.75)*5 % Div= 95-((CR-0.75)/.5)*90

Vehicle	Cost Ratio Interval	Relationship
	1.25<=CR <=2.00	% Div= ((2-CR)/0.75)*5

For calculating the cost ratio, the generalized cost is considered on the project road and alternative road. The generalized cost consists of three components vehicle operating cost (VOC), value of time (VOT) and toll cost. VOC was calculated based on the observed speed, traffic, road characteristics as per IRC-SP-30-2019. From the observed speed travel times are calculated and VOT thereby.

- **Toll Fee on Proposed Project Road**

Clause 30.4 of the concession agreement outlines that if a new road is proposed adjacent to the current highway and an anticipated diversion of traffic from the existing route, a supplementary tollway fee is required. This additional tollway fee must be at least 25% higher than the toll levied on the existing highway to discourage traffic diversion from the established route. In line with this provision, an assumption was made that the toll on the proposed road would be increased by 25%. Subsequently, a diversion analysis was conducted based on this assumption.

3.3.2. Diverted traffic as per VOC, VOT and Toll

It is obvious that the possible usage of proposed road depends on the condition of the road, travel cost and Value for time. Considering these parameters, detailed diversion analysis has been carried out and Presented in the **Annexure 3.1.** Summary of the Diverted traffic to proposed road (VRK expressway) is provided in the **Table 3.8.**

Table 3.8: Diverted Traffic (%) as per VOC, VOT and Toll

Vehicle type	% Diversion
Car	**52**
Bus	**44**
LCV	**46**
2Axle	**44**
3Axle	**43**
MAV	**43**

3.3.3. Potential Diverted Traffic based on the OD data

In addition to diverted traffic worked out as the procedure described in the above sections, it was also calculated based on the OD zonings and the data obtained through OD surveys conducted for a period of 48 hrs at two toll plaza locations as discussed in Chapter 2.

The OD Zoning codes are given in Table 2.9 of Chapter 2. In the OD zones, Zones 16,19,21,23 are towards Kolkatta. The Zones 25,26,27,30,31,32,34-39,42,43 and 45 towards Varanasi and 8,9,17,18 zones are considered based on trip length on both sides. An OD Pair is said to be a potential OD pair when the traffic from OD zones of Kolkatta direction travels to the OD zones in Varanasi direction and vice versa. These OD pairs from OD Zoning are carefully chosen for all the vehicle classes to obtain the potential diverted traffic.

Potential Diverted traffic

In the present case, as it is a green field alignment which is a new facility being created to with access controlled to reduce the congestions on existing road network and to facilitate the speed movement of goods and people, there is no any existing traffic. However, from the OD analysis, it is found that

there is a potential traffic which would be diverted onto the new expressway. This assigned traffic is known as the potential diverted traffic and the same is presented in the Table 3.9.

Table 3.9: Potential Diverted Traffic (%)

Vehicle type	TP -1 Beliyad Toll plaza			TP-2 Banskopa Toll plaza		
	Diverted traffic	Surveyed vehicles	% of diversion	Diverted traffic	Surveyed vehicles	% of diversion
Car	828	1943	43%	219	2385	9%
Bus	42	74	57%	28	289	10%
LCV	104	164	63%	49	157	31%
2-AT	188	337	56%	159	510	31%
3-AT	231	391	59%	211	766	28%
MAV	1018	1703	60%	550	1621	34%
Total Vehicles	**2411**	**4612**	**52%**	**1216**	**5728**	**21%**
Total PCUs	**7041**	**12394**	**57%**	**3993**	**14412**	**28%**

3.3.4. Actual Diverted traffic

The actual diverted traffic was calculated by multiplying the percentage of diverted traffic derived from the origin-destination survey with the percentage of potential diverted traffic obtained from the zoning. Actual Diverted traffic % at two locations is given in Table 3.10.

Table 3.10: Actual Diverted Traffic (%)

Vehicle type	TP -1 Beliyad Toll plaza	TP-2 Banskopa Toll plaza
Car/LMV	17%	7%
LCV/Mini bus	34%	12%
Bus	20%	7%
Truck	26%	13%
Truck 3 Axle	25%	12%
MAV	25%	14%

The Varanasi-Ranchi-Kolkata (VRK) expressway is anticipated to be inaugurated in the West Bengal region starting from 2031 onwards. A gradual traffic diversion ranging from 15% to 100% has been assumed, with specific percentages allocated for each year from 2031-2032 to 2035-2036. These percentages are as follows: 15% for 2031-32, 30% for 2032-33, 60% for 2033-34, 90% for 2034-35, and 100% for 2035-36. These percentages were applied for all the vehicles individually. It is important to emphasize that these figures are preliminary estimations, and close monitoring of the traffic situation will be essential once the expressway becomes operational to obtain a more accurate assessment of traffic flow.

3.3.5. Traffic Forecasting

The traffic forecast of vehicles and PCUs in 3 scenarios (Normal, Optimistic and Pessimistic) at two toll plaza locations in AADT is given in **Table 3.11** to **Table 3.16.**

Table 3.11: Traffic Forecast at Beliyad Toll plaza based on Normal Growth rates

FY	Car/Light Motor Vehicle (LMV)	Bus	Light Commercial Vehicle (LCV)/Mini bus	Truck 2 Axle (2-AT)	Truck 3 Axle (3-AT)	Multi Axle Vehicle (MAV)	Total Vehicles	Total PCUs

CHAPTER 4. TOLL REVENUE FORECAST

4.1 GENERAL

This chapter discusses the estimated toll revenues of two toll plaza locations - Beliyad and Banskopa. The toll fee rates are calculated based on the entire corridor length between Barwa Adda and Panagarh, including the Panagarh Bypass. It's worth noting that fee rates differ at each toll plaza location, corresponding to the varying Tollable lengths and Bypass sections. The Toll revenue estimates were based on the traffic projections discussed in the previous chapter, covering the entire concession period.

4.2 TOLL REVENUE FORECASTING

As outlined in the previous sections, toll revenue projections were estimated using a combination of projected traffic and toll rates. In terms of toll rates, the rates for each vehicle category and tolling length were determined based on the wholesale price index (WPI) and the base rates set by the NH fee notification for the project.

4.2.1. Length of the Project Road

According to the toll fee notification, the length of the Project Road is 122.88 kms. The applicable length of the project road under the toll plazas is mentioned in **Table 4.1.**

Table 4.1: Length of the road under Toll Plazas Jurisdiction

Toll Plaza	Control length (Km.)	Bypass Length (Km.)	Total length (Km.)
Beliyad	66.76	-	66.76
Banskopa	48.0	8.12	56.12

4.2.2. Toll revenue estimation

4.2.2.1 Toll Fee Revision Methodology

Toll fee calculation is based on the NHAI's fixed base rate, which is subject to annual revision in accordance with the formula prescribed by NHAI under the toll rules of 2008.

a) **Base Rate**: As per the NHAI toll fee Rules, 2008, the fee rate for using a section of Barwa Adda–Panagarh is determined by considering the expenditure involved in building, maintenance, management, and operation of the said stretch for the base year applicable. The applicable rates are given in **Table 4.2.**

Table 4.2: Base Rate for Vehicle Category for Payable Length

Type of Vehicle	Base Rate fee per Km. length
Car, Van, Jeep	0.65
LCV	1.05
Bus or Truck	2.20
3-AT	2.40
MAV/HCM/EME	3.45
OSV	4.2

b) **Annual revision of rate of fee as NHAI Toll Rule 2008:** Under rule 4, the specified rates shall be subject to an annual increase of three percent, effective April 1, 2008. The increased rate will be

considered as the base rate for subsequent years. The applicable base rates will also be revised annually **on April 1** to reflect the wholesale price index increase. However, the revision will be limited to 40% of the rise in the wholesale price index. The formula used to determine the applicable fee rate shall be as follows.

$$\text{Applicable rate of fee} = \text{Base Rate} + \text{Base Rate X} \left\{\frac{\text{WPI A} - \text{WPIB}}{\text{WPI A}}\right\} * 0.4$$

Where, Applicable rate of fee shall be the rate payable by the user;

Base rate shall be the rate specified in the previous financial year;

WPI A means the wholesale price index of the week ending-on or subsequent to 1st January immediately preceding the date of revision under these rules; and

WPI B means the wholesale price index of the week ending on 6" January, 2007 i.e. 208.7.

4.2.2.2 WPI Forecasts

a) Wholesale Price Index

The Wholesale Price Index (WPI) is a measure that tracks the price movement of critical commodities of national relevance, which are grouped under three main categories: Primary Articles, Fuel and power, and Manufactured Products. The WPI is determined through the averaging principle based on the movement of individual commodities within these categories.

Until 2010, the WPI was computed with a base year of 1993-94 for about 435 commodities grouped as mentioned above. The Office of Economic Advisor, Prime Minister's Office, published the weekly index. In recent years, the base series of WPI has been changed from 1993-94 to 2004-05 and from 2004-05 to 2011-12. To ensure continuity in the wholesale price index, the Central Statistical Organization (CSO) provided linking factors for the 2004-05 and 2011-12 series to arrive at the WPI values for the 1993-94 series. According to the NHAI policy number 18.30 dated March 20th, 2018, the linking factor for 2004-05, considering the base of 1993-94, is 1.873, and that of 2011-12, regarding the base of 2004-05, is 1.641.

b) Past trends of the Wholesale Price Index

The trends of WPI for the calendar year 2012 and financial year 2011-12 were collected and analyzed to identify any patterns. Table 4.3 displays the WPI trends for all commodities categories over a decade.

Table 4.3: Past trends of the WPI

Calendar Year			Financial Year		
Year	WPI	Inflation Rate	Year	WPI	Inflation Rate
2012	100		2011-12	100	
2013	111.1	11.10	2012-13	106.9	6.90
2014	114.8	3.33	2013-14	112.5	5.24
2015	110.3	-3.92	2014-15	113.9	1.24
2016	110.3	0.00	2015-16	109.7	-3.69

Calendar Year			Financial Year		
Year	WPI	Inflation Rate	Year	WPI	Inflation Rate
2017	114.1	3.45	2016-17	111.6	1.73
2018	118.9	4.21	2017-18	114.9	2.96
2019	121.2	1.93	2018-19	119.8	4.26
2020	121.8	0.50	2019-20	121.8	1.67
2021	135	10.84	2020-21	123.4	1.31
2022	151.3	12.07	2021-22	139.4	12.97
2023	151.8	0.33	2022-23	152.5	9.40
			2023-24	153.0	0.32
		4.35			**3.69**

Based on the data from the table, it can be seen that the average inflation rate has grown by 4.35% when calculated based on the calendar year since 2012, while it has grown by 3.69% when calculated based on the financial year. Over the last eleven years, the inflation rate has fluctuated upwards and downward. Therefore, considering this, an inflation factor of 3.5% is considered for FY 2025-2026, 5% for FY2026-2028 and 4.5% has been chosen for the remaining concession period for estimation of WPI, which is close to the average of the last eleven years.

4.2.3. Toll fee Projections

The toll rates released by NHAI for FY 2024-2025 for two plaza locations presented in Table 4.4 and Table 4.5.Based on the NHAI approved rates, the estimated toll fee for FY 2025-26 has been calculated and is presented in Tables 4.6 and 4.7 for Toll Plazas 1 and 2, respectively. The toll fee projected for the entire concession period submitted in separate excel file.

Table 4.4: Projected Toll Rates (Rs.) for the FY 2024-25 for Toll Plaza 1

Vehicle	Single Journey	Return Journey	Monthly pass	Local Registered	Local Monthly pass
Car	100	145	3,265	50	340

2-AT	310	465	10,370	155	
3-AT	340	510	11,310	170	
MAV	490	730	16,260	245	

4.2.4. Vehicle wise trip categories

The toll revenue calculation is based on the concessions provided to road users, which differ based on the type of vehicle and the number of eligible trips allowed for each toll category. The number of eligible trips varies based on the toll fee category, like Single (Full fare), Return, Local passenger, and Monthly Pass, for both passenger and commercial vehicles. Tables 4.8 and 4.9 showcase the number of eligible trips for each toll category. The estimation of individual toll vehicles by the type of toll ticket category is based on the recent toll traffic data from April 2024 to September 2024.

Table 4.8: Vehicle wise Trip Categories at TP 1

Vehicle Type	Single	Return	Monthly Pass	Local Registered	Local Monthly Pass	Exempt and Others	Total
Car	34.1%	47.7%	0.0%	1.5%	10.1%	6.6%	100.0%

OS	92.8%	0.0%	0.0%	7.2%	0.0%	0.0%	100.0%

4.2.5. Effect of Variation in Growth Rates and Extension of concession period

For determination of the effect of variation of traffic growth on the concession period, clause 29.1.1 of the Concession Agreement reads as: "The Authority and the Concessionaire acknowledge that the traffic as of 1st October 2023 (the "Target Date") is estimated to be 71,077 PCUs per day (the "Target Traffic"), and hereby agree that for determining the modifications to the Concession Period under this Article 29, the actual traffic on the Target Date shall be derived by computing the average of the traffic as determined by traffic sampling to be undertaken, by Clause 22.3, on the date that falls one year before the Target Date, on the Target Date and the first anniversary of the Target Date (the "Actual Average Traffic"). To avoid doubt, it is agreed that traffic sampling shall be undertaken for a continuous period of 7 (seven) days at any time within 15 (fifteen) days before the date specified herein, and the average thereof shall be deemed the actual traffic. It is further agreed that if the Project Highway shall have two or more Toll Plazas in the same direction of travel, the average traffic shall be computed to determine the Actual Average Traffic hereunder".

If the Actual Average Traffic has fallen short of the Target Traffic by more than 2.5% or exceeded the Target Traffic by more than 2.5%, the concession period shall be deemed to be modified by Clause 29.2.

According to clause 29.2.1, In the event Actual Average Traffic shall have fallen short of the Target Traffic, then for every 1% (one percent) shortfall as compared to the Target Traffic, the remaining Concession Period shall, subject to payment of Concession Fee and Additional Concession Fee by this Agreement, be increased by 1.5% (one point five per cent) thereof; provided that such increase in Concession Period shall not in any case exceed 20% (twenty per cent) of the Concession Period. For the avoidance of doubt, and by way of illustration, it is agreed that in the event of a shortfall of 10.6% in Target Traffic, the concession period shall be increased by 15% there off.

According to clause 29.2.2, In the event Actual Average Traffic shall have exceeded the Target Traffic, then for every 1% (one percent) excess as compared to the Target Traffic, the Concession Period shall be reduced by 0.75% (zero point seven five) thereof; provided that such increase in Concession

Period shall not, in any case, exceed 10% (twenty percent) of the Concession Period. To avoid doubt, and by way of illustration, it is agreed that in the event of an excess of 8.7% in Target Traffic, the concession period shall be reduced by 6% there off.

The client concluded traffic on target date as follows
The highest average daily traffic (7 days continuous period) observed from 21st Sept to 27th Sept hence same period was considered for all three while arriving the actual traffic on target date. The actual average traffic (Average of continuous 7 days from 21st Sept to 27th Sep) across all three years is.

- 2022: 42,645 PCUs (Traffic on one year before the Target Date)
- 2023: 40,159 PCUs (Traffic on Target Date)
- 2024: 43,534 PCUs (Traffic on First Anniversary of Target Date)

The findings revealed that the average for the three years works out to be 42,113 PCU, 40.75% lower than the targeted traffic of 71,077 PCU. Consequently, as Article 29.2 of the concession agreement specifies, the client is eligible for a concession period extension of 61.13%.

However, as stipulated in Article 29.1, the maximum permissible extension is 20% of the concession period of 20 years, equivalent to 4 years. Additionally, due to the impact of the COVID-19 pandemic, India underwent nationwide lockdowns during April and May 2020, as well as April and May 2021. Severe restrictions, including intra-state and inter-state movements, were imposed throughout both lockdown periods. Toll operations were halted for a total of 90 days during these lockdowns. As a result, it is assumed that the concession period may be further extended to compensate for the operational downtime caused by these lockdowns. Therefore, toll revenues were estimated to be an additional 5 years above the concession period assuming future extensions.

4.2.6. Effect of Revenue as per notification of Election Commission of India (ECI)

In light of the General Elections 2024, the Ministry of Road Transport and Highways (MoRTH) issued a letter, No. NHAI/13013/547/CO/Rate Revision (E-236507) dated 30.03.2024, requesting clarification on whether the revision of fee rates is permissible with effect from 01.04.2024 or if it should await the completion of the election process.

In response to that, the Election Commission of India (ECI) clarified via letter no: 437/6/CG-HP/ECI/LET/FUNCT/MCC/2024 dated 1.04.2024 that the collection of revised fees, effective from 01.04.2024, shall only be implemented upon the completion of polling in the relevant State, i.e., after the polling date/dates in that State.

The project "Barwa Adda Expressway Limited" traverses through the states of Jharkhand and West Bengal. The elections in both states, spanning all phases, will conclude on 01.06.2024, with toll collection based on revised toll fees expected to commence on 03.06.2024. Consequently, the Concessionaire will experience reduced toll revenue for 63 days (from 01.04.2024 to 02.06.2024). The

comparison of the toll revenue impact, based on the rates of 2023-2024 and 2024-2025, for a 63-day period at two toll plazas, is presented in **Table 4.10.**

Table 4.10: Comparison of Toll Revenue Impact based on Revised and old rates

Toll Plaza	Toll Revenue as per 2024-2025 rates	Toll Revenue as per 2023-2024 rates	Reduced Revenue
Beliyad Toll plaza	17.871 Cr	17.432 Cr	0.439 Cr
Banskopa Toll plaza	29.518 Cr	28.703 Cr	0.815 Cr
Total	**47.389 Cr**	**46.135 Cr**	**1.254 Cr**

The NHAI needs to compensate **1.254 crores** to Concessionaire.

4.2.7. Toll revenue projections

To estimate toll revenue, projections are made based on future traffic, toll fees, and trip rates. Traffic numbers are projected by financial year, with toll rates revised annually on April 1st. Toll revenue projections are made for each financial year until the end of the concession period. Toll will be collected every day of the year, and from FY 2024-25 to FY 2038-39. **Table 4.11 to 4.13** summarizes the projected annual toll revenue of Toll Plazas 1 and 2 in Normal, Optimistic and Pessimistic growth rates.

There is no significant difference in toll revenue when comparing the previous projection based on data until March 2024 with the current projection based on data until September 2024, for FY 2024-2025.The difference is only 1%. However, revenue was slightly reduced due to toll collection at previous rates for a 63-day period (1st April 2024 to 2nd June 2024), following an Election Commission of India (ECI) notification due to general elections in Jharkhand and West Bengal.

Table 4.11: Estimated Toll revenue for 2 Toll plazas-Normal Growth rates

Financial year	Beliyad Tollplaza	Banskopa Toll plaza	Total Revenue in Crores	Remarks
2024-2025	106.4	171.8	278.2	134.7 Cr-(Actual Revenue till Apr-Sep 2024)

CHAPTER 1. INTRODUCTION

1.1 GENERAL

Hazaribagh Ranchi Expressway Limited (HREL) was engaged to design, construct, finance, develop, operate, and maintain four laning of Hazaribagh Ranchi section of NH-33 from Km 40.500 to Km 114.000 in the State of Jharkhand on a BOT Annuity basis. Important Milestones for the Project are presented in Table 1-1.

Table 1-1:Project Milestones

S.No	Particulars	Description
1	Date of Signing of Concession agreement	08/10/2009
2	Provisional Completion Issued	15/09/2012
3	Final Completion Issued	01/04/2015
4	Concession Period	18 Years including Construction Period
5	Scheduled date of transfer of Project to NHAI	31/07/2028

The Project is presently under maintenance by Concessionaire Hazaribagh Ranchi Expressway Ltd. Concessionaire has engaged M/s. HBS Infra Engineers India Pvt Ltd to undertake a technical due diligence study for the said project. This report presents the work methodology for the study and initial observation of the Project.

1.2 SCOPE OF WORK

The study's main objective is to critically review the current status of the Project corridor, including details pertaining to its construction and maintenance and to provide requisite technical information. The objective of the study can be broadly defined as follow:

1.2.1. Operations Phase

- Undertake detailed reconnaissance to appreciate the Project corridor characteristics.
- Collection of relevant records and documents and critical review of same.
- Undertake field investigations visual as well as test mentioned under asset condition assessment and to collect first-hand information on the present condition of Project Road and establish the requirements for rehabilitation and up-gradation
- Review of Safety Aspects.
- Undertake preliminary designs for immediate rehabilitation requirements based on condition assessment and concession agreement specifications
- Prepare a maintenance schedule for the entire duration of the concession period based on technical analysis.
- Review and Preparation major maintenance cost schedule for the concession period.

- Study and highlight other relevant details like penalties, claims, petition, deviations, etc. which may have an impact on future maintenance and cost of the project.

1.2.2. Asset Condition Assessment

- Assessment of road assets in conformance with specifications, standards, and codes stipulated in the Concession Agreement and O&M manual, etc.
- A detailed inventory survey of road assets including main carriageway, structures, service roads, lightings, drains, road furniture including signage, MBCB, guard rails, etc. other safety measures, toll collection infrastructure, buildings, plantation, vehicles, and other objects. Comparison between requirement and actual availability at the site on sampling basis on the insurance of assets.
- Assessment of the condition of the structures including but not limited to visual inspections of bearings, expansion joints, superstructures, foundations, associated components, pre-stress anchorages (if any)
- Conducting the following tests
    - Trial pits for crust verification at every 15 kms
    - Falling Weight Deflectometer (FWD) test of the stretch to ascertain the existing strength of the pavement. The frequency of the FWD will be as specified in the IRC 115 guidelines
- Assessment of the condition of the road pavement including but not limited to visual inspection of the pavement, review as as-built design and assess design assumptions and provide a detailed report thereon
- Reviewing of test certificates & outcomes of the past few years along with visual road condition
- Assessment of the physical dimensions condition of the infrastructure to determine useful lives of the materials and equipment requiring rehabilitation and/or replacement.
- Critical review of the Pavement Condition Survey to suggest the pavement condition and probable rehabilitation treatment.
- Preparation of detailed Pavement inspection report and analysis with chainages wise pavement condition and rectification strategies.
- Pavement inspection report & rectification strategies to be provided in 100mtr interval for both MCW & SR (LHS & RHS side).
- In continuation to the above point the existing Pavement need to be categorized as Good, Average, and Poor based on their estimated life span. For 5 years or more (Good), 2-5 years (Average), and less than 2 years (Poor).
- Recommendations for any major repair, rehabilitation, and strengthening based on the condition survey and design reports.
- To provide a detailed photographic report of the infrastructure assets and their condition to withstand till the end of the concession period. Suggestion and cost evaluation for any additional repair/rectification /modification required.

- Determine the appropriate level and frequency of routine and major maintenance activities required to keep the road assets in good condition and to meet the performance and O&M standards, specifications, and requirements.
- Review the major maintenance work undertaken if any, and prepare projections for the future.
- Major maintenance expenses (incl. any hand-back requirements), so as to ensure compliance with the terms of the Concession Agreement
    - Review of condition of SPV assets including ails equipment and vehicles etc.
    - Review of past accident reports, identification of black spots, deficiency of safety requirements if any, and preparation of a proposal to curb accidents and safety hazards to road users.
    - Detailed major maintenance cost forecast along with estimation of costs towards handover requirements.
    - Review the availability of labour, material and machinery at the project site and provide an assessment of operational challenges involved, if any as well as estimated costs for these.

1.3 APPROACH

The Consultant with its wide experience has categorised the scope of work in following activities:

- General Review
- Assessment of Asset Condition
- Investigations
- O & M Assessment

The Consultant with its wide experience has categorised the approach of work in number of activities as presented in Table 1-2.

Table 1-2: Approach of Work

S No	Task	Sub-Task	Remarks
1	General Review	• Agreements • Project Clearances • Change of Scope • Land Acquisition • Project Completion • O&M Manual & Maintenance Issues • DPR/As-built Drawings • Possibility of Widening • Hydrological Condition of Adjoining Water Bodies • SPV Assets • Past Accident Records	A detailed list of issues that can impact the investment to be provided including (a) any operational challenges that can be faced by the Project; and (b) any costs to be incurred to address those issues

2	Assessment of Road Condition	• Road Assets ▪ Road Pavement ▪ Traffic Signage ▪ Bus Bays with Bus Shelters ▪ Truck Lay Bye ▪ Median/CW Edge Kerb Stone ▪ Km Stones ▪ Drain ▪ Toll Plaza ▪ Crash Barriers • Structure Condition • Assessment of Pavement	A detailed list of assets that can impact the investment to be provided will be assessed and monetized
3	Investigations	• Road Inventories • Visual Pavement Condition • Visual Condition of Structures • FWD Survey for Project Length • Test Pits @ 15 Km Intervals	Traffic details shall be provided by the Concessionaire. Each detail to be utilized for assessment of road condition so as to estimate the pending O & M issues.
4	O & M Assessment	• Review, comment and propose optimization strategy • Review accident data and suggest safety requirements • Review of existing O&M Contractor's contract • Review historical O&M costs • Develop details O&M cost forecast ▪ Routine Maintenance Cost ▪ Periodic Maintenance Cost ▪ Immediate repair Cost ▪ Balance Punch List • Review Availability of Labour, Material and Machinery at the Project Site	Estimate of overall O & M Costing

CHAPTER 2. PROJECT DESCRIPTION

2.1 GENERAL

This project stretch in the state of Jharkhand starts from Km 40.500 and ends at Km 114.000 having a four-lane configuration and mode of construction is BOT Annuity. Hazaribagh Ranchi Expressway Limited (HREL), a special purpose vehicle (SPV) created for design, construct, finance, develop, operate and maintain the project stretch. The Location Map of the Project is shown in **Fig 2.1.**

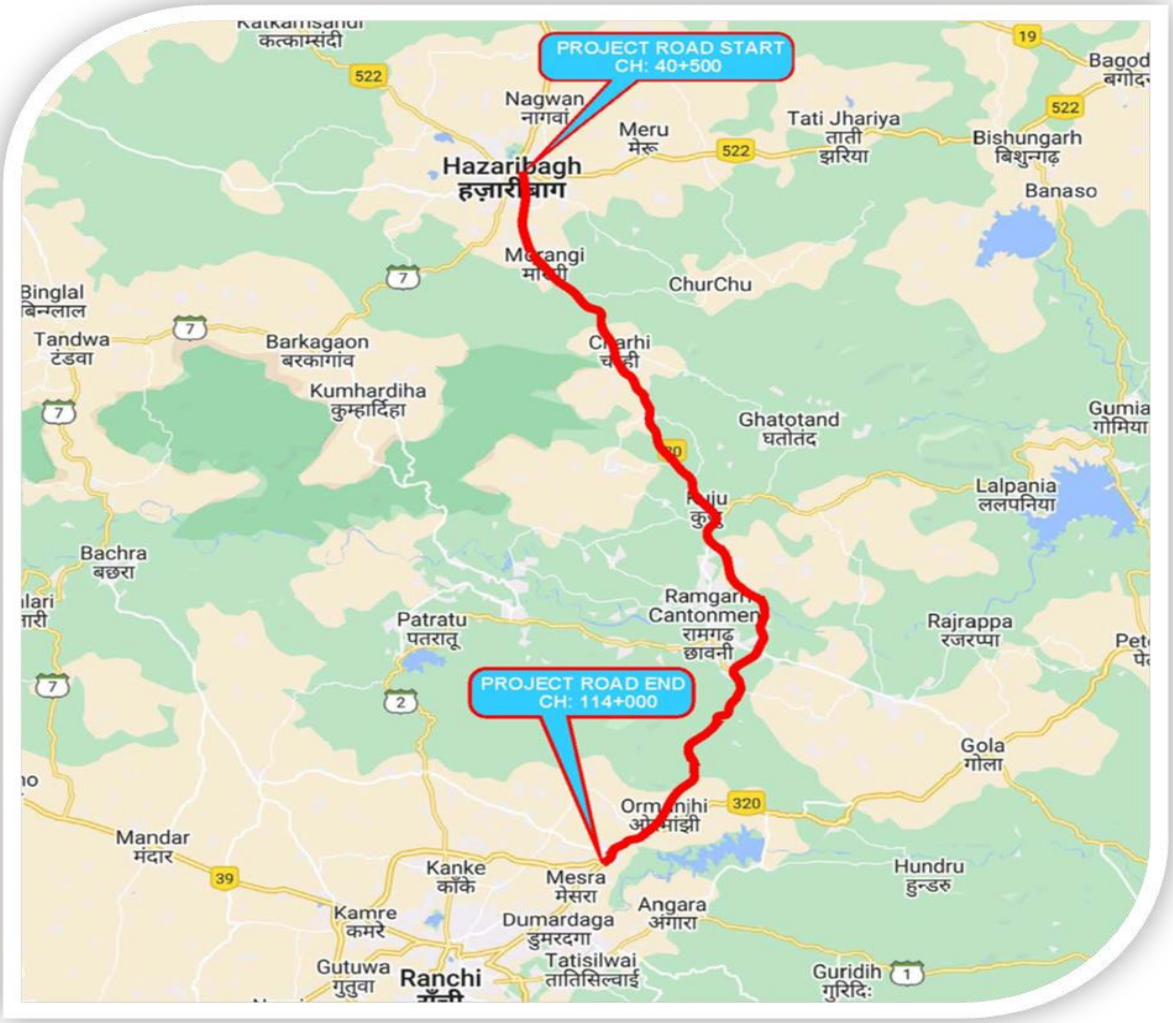

Figure 2-1: Project Location Map

2.2 PROJECT SALIENT FEATURES

Project milestones are summarised and presented in the Table 2-1.

Table 2-1: Project Milestones

S.No	Particulars	Description
1	Name of the Project	4 Laning of Hazaribagh Ranchi Expressway Limited
2	Name of Concessionaire	M/s Hazaribagh Ranchi Expressway
3	Date of Signing of Concession	08/09/2009
4	Scheduled Project Completion	27/01/2013
5	Scheduled end of Concession	31/07/2028

Salient Features of the Project in line with Technical Schedules are presented in Table 2-2.

Table 2-2: Salient features of the project

S.No	Project Features	Description	Remarks
1	Start of the Project Road	Km 40.500	
2	End of the Project Road	Km 114.000	
3	Total Length of The Project Road	73.5 Km	
4	Design Speed	80 KMPH	
5	Right of Way	60/45 m	
6	Lane Configuration	4-Lane	
7	Paved Carriageway Width	17.5 m	
8	Width of Median	1.5 to 4.5 m	
9	Length of Service Road	Total length Km 15.21 on Both sides of MCW	
10	Type of Pavement	Flexible Pavement	
11	Design MSA	100 MSA for MCW and 20 MSA for SR	
12	No of Toll Plazas	01	
13	No of Interchanges	00	
14	No of Vehicular Underpasses	05	
15	No of ROBS	02	
16	No of PUP's	02	
17	No Interchange Structures	00	
18	No of Major Bridges	01	
19	No of Minor Bridges	09	
20	No of Box Culverts	44	
21	No of Pipe Culverts	106	
22	No of Bus bays	23	
23	No of Bus Shelter	23	

2.3 RECONNAISSANCE SURVEY PHOTOGRAPHS

Some representative photos taken during the Reconnaissance Survey are presented in Photo 2-1.

START OF THE PROJECT

MEDIAN PLANTATION

CHAPTER 3. GENERAL REVIEW

3.1 AGREEMENTS

An agreement between NHAI and Hazaribagh Ranchi Expressway Limited (HREL) was signed on 08th October 2009 for a Concession Period of 18 years from the start of the Commencement Date. Project milestones are summarised and given in the Table 3-1.

Table 3-1: Project Milestones

S.No	Particulars	Description
1	Date of Signing of Concession agreement	08/10/2009
2	Provisional Completion Issued	15/09/2012
3	Final Completion Issued	01/04/2015
4	Concession Period	18 Years including Construction Period
5	Scheduled date of transfer of Project to NHAI	31/07/2028

A provisional Completion Certificate (COD) was issued on 01st April 2013. There are no pending Punch List Items to be completed.

3.2 LAND ACQUISITION / ENCROACHMENTS / UTILITIES

There are no land acquisition / encroachment issues in the Project. There are no pending works on account of land acquisition / encroachments. There is no major utility within ROW. Utilities are restricted within the space provided for the utilities.

3.3 CHANGE OF SCOPE

There has been some change of scope during the stage of Construction:

3.3.1. Cost of Negative COS

There has been certain descoping from project scope. Table 3.2 provides detail of the negative Chage of Scope as recommended by IE. However, Concessionaire has disputed the same on the method of arriving at the revised value of scope.

Table 3-2: Negative Change of Scope

SI.NO	Item	Qty.	Revised Value (Rs.) as per SOR 2012	Remarks
1	VUP at 114.620(112.300, lrba)	1 NO.	-96443314	Ref: 1. NHAI/PIU/PD/RNC/NH-33/HEL/COS/99, Dated 19th April 2017, M/s Feedback infra IE letter no. FIPL/17-18/Ranchi/IE/O&M-341, Dt. 10-10-2017
2	VUP at 57.00	1 No.	-96443314	
3	PUP at 106.158	1 No.	-3973754.577	
4	PUP at 64.993	1 NO.	3973754.577	
5	PUP at Km 68.250	1 NO.	3973754.577	

SI.NO	Item	Qty.	Revised Value (Rs.) as per SOR 2012	Remarks
6	Kujju Fire Zone	1.2 Km	-52162123	Ref: 2-August 2019 -ve +ve COS NHAI Letter 574
7	Service Road in VUP/PUP (Slip Ramps)	0	0	
8	Median Width		-7795700	
9	Bus Bays & Lay Byes	2 Nos.	-3000000	
10	Ramgarh Bypass	1 No.	0	
11	Service Road	1494 Mtr	-19779593	
12	Covered Drain	3868 Mtr	-18567687	
13	Lined Drain	90473 Mtr	-163919434	
14	Highway 303 Mtr Lesser Constructed	303 Mtr	-12373149	
Total			**-46.65**	**Cr**

3.3.1. Cost of Positive COS

Some scope has been added at the project stage. Some of these Change of Scope (COS) are still in the approval stage. A summary of such positive change of scope, including those waiting for final approval, are given in Table 3-3.

Table 3-3: Positive Change of Scope

Sl. No.	Summary of work	Proposal submitted by SPV (INR) Cr	Amount recommended by IE (INR) Cr	Amount approved by NHAI (INR) Cr
1	Curves widening in Ghat	21.8	21.37 / 7.63	7.63
2	Construction of Toilet Block	0.401	0.401	0.401
3	Mini Nest	0.123	0.123	0.123

3.4 DPR / TECHNICAL SCHEDULE / AS-BUILT DRAWINGS

A review of as-built drawings is carried out and generally they are found in order.

3.5 O & M MANUAL AND MAINTENANCE ISSUES

O & M Manual has been prepared as per the requirements of the Concession Agreement.

3.6 PROGRESS REPORTS

Progress Reports of IE has been studied for insight into projects regarding quality, scope, variations, and conflicts type concerns. For project road Hazaribagh - Ranchi construction is complete, and the project is in the operation phase hence no critical balance items are pending. IE reports do not mention and major concern. Some of the concerns and observation in IE's latest report is given in the Table 3.4.

Table 3-4: Progress Report Review

Sr. No	Description	Impact / Concern	Reference
1	Weigh in Motion & Static Bridge.	Calibration and Stamping is in Progress.	Site Visit & IE Report Feb 2023
2	External Electrification e.g. Street Light, VMS and High Mast.	Repair work needs to be done at some locations.	Site Visit & IE Report Feb 2023
3	Road Furniture: Solar Blinker, Delineator, OHM, PGR, Road Marking etc.	Installation/Maintenance of road furniture work in progress.	Site Visit & IE Report Feb 2023
4	One Jeep or similar Vehicle for patrolling.	One Jeep or similar vehicle in good working condition along with chauffeurs shall be provided to the State Police Department or a substitute thereof for round the-clock patrolling.	Site Visit & IE Report Feb 2023

3.7 PAST ACCIDENT RECORDS

Past accident records shared by Concessionaire for a period of 2021-2023 were reviewed and the following inferences are drawn. Accident data are submitted in **Annexure 3.1**.

- Most of the accidents on the project road took place between Km 94.000 to Km 95.000.
- Accidents happened 81% in straight portions, 10% in slight curves, and 9% in sharp curve locations.
- Almost 13% of the total accidents are fatal in nature.
- Almost 83% of accidents are on account of over speeding and fault of the driver.

3.8 ROAD SAFETY OBSERVATIONS

It was observed during the operation phase of the project that at Ch. 51+800 to Ch. 52+300 (Photo 3.1) there is a sharp curve of Radius around 100m due to which several accidents have been observed. Realignment at this location is required as a safety improvement measure and decision regarding the same is to be taken by authority. Another location from Ch. 95+050 to Ch. 95+550 (Photo 3.2) has accidents history which can be rectified by short term measures such as Signage (Speed limit) and TBM Marking.

Photo 3-1: Road view at Ch. 51+800 to Ch. 52+300

Photo 3-2: Road view at Ch. 95+050 to Ch. 95+550

3.9 SPV ASSETS

The list of Men and Machinery employed by O & M Contractor is annexed in **Annexure 3.2**. Some of the Machinery are owned by the O & M Contractor. However, in the routine maintenance cost, the hire charges for this equipment are being considered.

3.10 NON- CONFORMANCE

The project is complete, and COD is achieved. Hence there is no pending NCR for the construction period.

CHAPTER 4. ASSESSMENT OF ASSETS

4.1 OVERVIEW OF ROAD ASSETS

On receipt of the letter of engagement from Road star Infra Investment trust, the consultant mobilized their team of experts comprising of Senior Highway Engineer, Bridge Engineer & Pavement experts at the site, along with support staff.

The consultant mobilized its team for a review of road assets. A team of engineers along with the lead visited the site for the preparation of inventories and to assess the condition of road assets.

Following surveys and investigations have been done on the project stretch to capture the condition of project assets and for the purpose of preliminary designs to assess maintenance and major maintenance requirements.

- Road Inventory and Asset inventory by NSV (Network Survey Vehicle)
- Roughness Index Test by NSV
    - Pavement Condition Assessment – by NSV
    - Structural soundness of pavement – FWD (Falling Weight Deflectometer)
    - Trial Pits
    - Structural Condition – Visual Inventory
    - Incremental Pavement condition - Visual Inventory.

All surveys and investigations were done as per standard guidelines and scope of the assignment. Table 4-1 provides schedule of survey and investigations.

Table 4-1 : Schedule of Investigations

Sr. No	Type of Survey	Specification	Date
1	Network surveying vehicle survey	Entire Length all lanes	26-04-2023
2	Falling Weight Deflectometer (FWD) Test	Entire Length	29-04-2023
3	Trial Pit	At each 15 Km	27-04-2023
4	Structure Inventory	Entire Length	25-04-2023 to 27-04-2023
5	Incremental Structure Inventory	Entire Length	03-11-2023 to 05-11-2023
6	Incremental Pavement Condition visual survey.	Entire Length	03-11-2023 to 05-11-2023

4.2 NETWORK SURVEYING VEHICLE

The Network Survey Vehicle is based on the latest survey techniques utilizing Laser, Global Positioning System and Video image processing tools etc. The Survey Vehicle is used for automatic collection of road inventory and pavement condition related data required for Road Asset Management, Pavement Maintenance Management System and Road Safety Audit Related Studies. In this system, all outputs are linked via a highly accurate distance measuring instrument and DGPS system. It allows all the data to be collected in a single pass consequently minimizing both the cost and the time needed to complete the data collection. Photo 4.1

Photo 4.1: NSV Survey in progress on the project road

The minimum parameter which has to be recorded using a survey with NSV in each lane, is not limited to the following:

(i) Inventory of Road; GPS coordinates, Pavement Type, Pavement Width, Terrain, Land use, Shoulder type and width, Drain Type and Width, Median Type, and Width, Wayside Amenities, Crash barrier, Signage, etc. (Note-All inventory items shall be recorded both sides of the road and Geo-tagged with images)

(ii) Condition of Road; Roughness, Rutting, Distresses (Cracking, Potholes, Bleeding, Surface failure etc.); (Note –All inventory items shall be recorded for each lane and Geo-tagged)

In addition, separate team comprising two engineers for visual inspection of pavement condition has been mobilized under the guidance and supervision of a pavement expert. Comprehensive studies and analysis were carried out to ascertain conformance of project road to standards laid down in Concession Agreement.

An Incremental study was carried out from 3rd November 2023 to 6th November 2023 through out the project length by our team to assess the condition of road assets, pavement condition and condition of structures.

Inventory and condition of Road Assets with Photographs are given in the subsequent sections.

4.3 OBSERVATIONS PERTAINING ROAD ASSETS

4.3.1. Carriage way Details:

The Main Carriage way width of total Project length is 4-Lane while the Service Road is from 3.5m to 7.5 m. The summary of Main Carriage way widths is given below in Table 4.2, Table 4.3 and service road widths is provided in Table 4.4. Detailed Inventory is given in **Annexure 4.1**.A few photographs of MCW and service road captured during the site visit are presented in the Photo 4.2.

Table 4.2 Summary of LHS Main Carriage way width

S.No.	Chainage (Km)		Length (Km)	Paved Width (m)
	From	To		
1	41.600	46.400	4.900	8.7
2	46.400	54.350	7.950	8.2

4.3.3. Median/CW Edge Kerb Stones

The Median width of the total Project stretch of Main Carriageway is 5.0m. The Summary of Median width, Median Kerb, median plantation and median openings are given in the Tables 4.7 to 4.9. Detailed Inventory is given in **Annexure 4.3**. Photographs showing the median opening is Photo 4.3.

Table 4.7 Summary of Median Kerb details

S.No.	Side	Total Length (Km)	Condition
1	LHS	9.707	Good
2	LHS	2.260	Bad
3	RHS	9.489	Good
4	RHS	0.420	Fair
5	RHS	3.915	Bad

Table 4.8 Summary of Median plantation

S.No.	Total Length (Km)	Condition
1	45.564	Good
2	20.501	Fair
3	3.360	Bad

Table 4.9 Summary of Median openings

S.No.	Location	No of Median Openings	Presence of Storage Lane
1	Main Carriageway	24	Yes
2	Main Carriageway	22	No

Median opening at Ch.65+330

Median opening at Ch.57+085

Photo 4.3 Photographs of Median openings

4.3.4. Kilometer stone

The RCC type Kilometer stones are there on the project road. The Summary of Kilometer Stones and condition are given in Table 4.10 and a detailed Inventory is given in **Annexure 4.4**.

Table 4.10 Summary of Kilometer stone (Nos)

S.No.	Location	Type	Good	Fair	Poor	Condition
1	Main Carriageway (LHS)	RCC Pillar	58	1	0	Good
2	Main Carriageway (RHS)	RCC Pillar	59	0	1	Good

4.3.5. Traffic Signage

The Traffic Signage along the Project Stretch is found to be in good condition. The Summary of Various Sign Boards is given in Table 4.11. Detailed Inventory is given in **Annexure 4.5**.

Table 4.11 Summary of Traffic Signage (Nos)

Location	Mandatory /Regulatory Signs	Cautionary /Warning Signs	Informatory /Guide Signs	Chevrons	Delineators	Total
Main Carriageway (LHS)	12	37	69	90	2	**210**
Main Carriageway (RHS)	18	42	76	118	0	**254**
Median	7	42	1	178	62	**290**

4.3.6. Crash Barrier

The Crash Barriers along the Project Highway are found to be W-Beam Metal Crash Barriers and Concrete Crash Barriers in Structure locations. The Summary of Crash Barrier length and condition is given in Table 4.12. Detailed Inventory is given in **Annexure 4.6**.

Table 4.12 Summary of Crash Barrier Condition on Main Carriage way

S.No.	Location	Type	Condition		
			Good (Km)	Fair (Km)	Damaged (Km)
1	LHS Carriageway	W Beam Crash Barrier	9.504	-	0.140
2	RHS Carriageway	W Beam Crash Barrier	9.956	-	0.152
3	LHS Carriageway	Concrete Crash Barrier	2.595	-	-
4	RHS Carriageway	Concrete Crash Barrier	2.419	-	-

Concrete crash barrier at Ch.57+950

Concrete crash barrier at Ch.68+290

W-beam crash barrier at Ch.112+500

W-beam crash barrier at Ch.53+470

Photo 4.4 Photographs of Crash Barrier

4.3.7. Highway Lighting

The Light poles of the Highway Lighting of Project Road consist of Single arm and Double arm poles on the Main carriageway and Service Road are summarized and provided in Table 4.13. Detailed Inventory is given in **Annexure 4.7**.

Table 4.13 Summary of Highway Lighting (Nos)

S.No.	Location	Single Arm	Double Arm	High mast Light
1	MCW	77	572	8

4.3.8. Drainage

Open lined drain is observed in a major portion of the project length. A summary of Drainage is given below in Table 4.14. Detailed Inventory is given in **Annexure 4.8**.

Table 4.14 Summary of Drains

S.No.	Type of Drain	Side	Length (Km)
1	Median Drain		2.445
2	Shoulder drain	LHS	9.769
3	Shoulder drain	RHS	15.729

4.3.9. Foot path condition

A cement concrete type of footpath is present on the project road. The summary of foot path condition is given below in Table 4.15. Detailed Inventory is given in **Annexure 4.9**.

Table 4.15 Summary of Foot path condition

S.No.	Location	Type of Footpath	Condition		
			Good (Km)	Fair (Km)	Poor (Km)
1	LHS Carriageway	Cement Concrete	0.095	0.355	0.040
2	RHS Carriageway	Cement Concrete	-	0.145	-

4.3.10. Guard posts

The Summary of Guard posts numbers with the condition is given in Table 4.16 and a detailed inventory is given in **Annexure 4.10**.

Table 4.16 Summary of condition of Guard posts

S.No.	Location	Type of Guard Post	Condition			Total (No's)
			Good	Fair	Poor	
1	LHS Carriageway	Cement Concrete	145	-	8	153
2	RHS Carriageway	Cement Concrete	394	-	7	401

4.3.1. Pedestrian crossing and Pedestrian railings

The summary of pedestrian crossing and pedestrian railings details are given in Table 4.17 and Table 4.18 and a detailed inventory is given in **Annexure 4.11.**

Table 4.17 summary of Pedestrian crossings

S.No.	Location	Total (No's)
1	LHS Carriageway	13
2	RHS Carriageway	13

Table 4.18 summary of Pedestrian railings

S.No.	Location	Condition		Total Length
		Good	Damaged	
1	LHS Carriageway	4.316	0.062	4.378
2	RHS Carriageway	5.1	0.021	5.121

4.3.2. Solar LED blinkers

The summary of solar LED blinkers is given in Table 4.19 and a detailed inventory is given in **Annexure 4.12.**

Table 4.19 summary of Solar LED blinkers

S.No.	Location	Condition			Total (No's)
		Good	Fair	Poor	
1	LHS Carriageway	64	-	-	64
2	RHS Carriageway	55	-	1	56

4.3.3. Major and Minor Junctions

The summary of Major and Minor junctions in the project road is given in Table 4.20. The details are given in **Annexure 4.13**. Photographs showing junctions are given in Photo 4.5.

Table 4.20 Summary of Junctions

S.No.	Junction type	Nos
1	Major junctions	**4**
2	Minor junctions	**43**

Junction at Ch.51+150 on LHS

Junction at Ch. 93+600 on LHS

Photo 4.5 Photographs of Junctions

4.3.4. Bus bays/Bus Shelters

List of the bus bays / bus shelters is given in Table 4.21 and their sample photographs are provided in Photo 4.6.

Table 4.21 Bus bays/Bus shelters Details

S.no	Chainage (Km)	Side	Type
1	47+550	LHS	Bus bay with shelter
2	51+210	LHS	Bus bay with shelter
3	59+270	RHS	Bus bay with shelter
4	63+270	LHS	Bus shelter
5	70+670	RHS	Bus bay with shelter
6	74+510	LHS	Bus shelter
7	82+065	LHS	Bus bay with shelter
8	87+560	LHS	Bus bay with shelter
9	93+050	RHS	Bus shelter

4.4 STRUCTURE INVENTORY AND CONDITION

Detailed inventory and visual condition surveys have been done for all the Land structures, Bridges. The details of existing structures are as follows.

4.4.1. Cross Drainage Structures

There are one number of major bridge and 9 minor bridges on project road besides the culverts. Construction of all the bridges completed and they are in sound condition. Photographs shown in Photo 4.8 gives the typical condition of these bridges.

Minor Bridge at Ch. 61+720

Minor Bridge at Ch. 71+020

Major Bridge at Ch. 85+817

Major Bridge at Ch. 109+200

Photo 4.8 Photographs of Bridges on the project road

4.4.2. Grade Separators

At built up sections and locations of important cross traffic roads VUPs are provided. There are 6 VUPs and 2 PUPs to facilitate cross traffic and safety. Additionally, there are 3 ROBs on the project road over railway line crossings.

ROB at km Ch. 67+570

ROB at km Ch. 80+892

CHAPTER 5. SOIL AND MATERIAL INVESTIGATIONS

5.1 GENERAL

As part of soil and materials investigations report preparation, the consultants have conducted subgrade soil investigations along the project corridor.

5.2 FIELD INVESTIGATION – SAMPLING AND TESTING

Field tests were conducted on the subgrade soils and required pavement materials were collected for needful testing. Table 5.1 presents the sampling criteria, tests, and testing procedures adopted for various field and laboratory tests.

Table 5.1 Site Sampling and Testing Criteria

S.No..	Type of Soil Sample	Sampling Criteria	Testing Criteria	
			Description of Test	Standard Code Applicable
Existing Subgrade and Pavement Materials				
i)	Subgrade Strength Test Pits	Minimum of one subgrade soil sample is obtained at an interval directed by the client & Material Engineer based on site condition	In-situ Density	IS 2720 (Part- 29)
			In-situ Moisture Content	IS 2720 (Part- 2)
			Soil Classification	IS 1498
			Sieve Analysis	IS 2720 (Part – 4)
			Atterberg Limits	IS 2720 (Part – 5)
			Laboratory Compaction Test	IS 2720 (Part – 8)
			4-day soaked CBR	IS 2720(Part – 16)
			Free swell Index	IS 2720 (Part-40)

5.3 INVESTIGATIONS ON SUBGRADE SOILS

The Subgrade investigations were carried out to know the strength properties of the existing soil. Visual inspection of the existing pavement condition was carried out prior to commencement of sub-grade investigation work. It was ensured to dig the test pits at an interval of 15km as per ToR. Various in-situ and laboratory tests were conducted on subgrade soils as per the project requirements as summarised in Table 5.1. The pavement composition details (pavement course, material type, and thickness) are also recorded at every test pit.

Discussion on the tests conducted and results obtained are carried out in the following sections.

Field tests were conducted as per the project requirement to determine the subgrade characteristics and strength. The field testing for subgrade soil includes:

- In-situ density determination at each test pit
- Field moisture content determination at each test pit

In-situ density (field density) and moisture content were determined as per the standards enlisted in Table 5.1. Field density is used to evaluate the degree of compaction and existing subgrade CBR at field density state. 40kg of samples were collected in damp proof bags for determining physical properties through laboratory testing. Required laboratory testing as specified in Table 5.1 were conducted the details of field dry density and field moisture content test results are furnished. Table 5.2 presents a summary of the test results for the entire project section. The field investigation Photographs are shown in Photo 5.1.

Photo 5.1: Photographs showing Field Investigations

Observations and Conclusions

(i) Soil Classification and Distribution

Table 5.2 shows the summary of subgrade test results. It is evident that the sub-grade soils are Clayey sand. Because of this soil type, Liquid Limit (LL) is ranging between 28-33%, and these values are within the limit as per MoRTH specifications (<50%). It is observed that the soils are non-plastic in nature and the maximum degree of free swell is observed as 20.0%. All the measured PI and FSI values are within the acceptable limits as per MoRTH guidelines, of 25% and 50% respectively.

(ii) Strength Parameters

Variance between MDD and FDD is converted in-terms of degree of compaction. The degree of compaction along the project corridor is ranging between 85.2%-91.0%. The 4-day soaked CBR is obtained along the project corridor is ranging from 10.5% to 12.4% with an average value of 11.3%.

Table 5.2 Summary of Subgrade Test Results

S:No	Location (Km.)	Side (LHS/ RHS)	Soil Classification as per IS: 1498	Gradation: Percent by weight passing through the Sieve (IS:2720-IV)			Atterberg Limits [IS :2720-Pt-V]			Modified Proctor Test (IS:2720-Pt-VIII)		In-situ Density		4-Days Soaked CBR (%)	Free Swell Index (%)	Degree of Compaction (%)
				Gravel (%)	Sand (%)	Clay & silt content %	Liquid Limit (LL) %	Plastic Limit (PL) %	Plasticity Index (PI)	Max. dry density gm/cc.	OMC (%)	FDD (gm/cc)	FMC (%)			
1	114.800	RHS	SC	7.4	58.5	34.1	33	25	8	2.01	10.2	1.76	9	12.4	10.0	95.0
2	100.020	LHS	SC	7.2	58.9	33.9	28	15	13	1.98	9.5	1.85	10	11.6	20.0	96.2

5.4 EXISTING PAVEMENT COMPOSITION AND ANALYSIS

Existing pavement composition (pavement course, material type, and thickness) was recorded at each subgrade test pit.

The summary of existing pavement crust thickness is presented in Table 5.3.

Table 5.3 Summary Pavement Crust Details along the project corridor

S.No.	Chainage (km)	Side (RHS/LHS)	Bituminous Thickness (mm)	Granular Thickness (mm)	Total thickness (mm)
1	54+960	RHS	180	430	610
2	70+030	LHS	200	450	650
3	85+000	RHS	200	400	600
4	100+020	LHS	200	450	650
5	114+800	RHS	200	420	620

Observations and Conclusions:

- The existing pavement along the project corridor is flexible in nature. The pavement composition comprises of bituminous layer, granular base/sub-base on the subgrade.
- Throughout the project road it possesses consistent bituminous/ granular layer thickness with an average of 200mm bituminous layer over 430 mm of granular layer.

CHAPTER 6. PAVEMENT EVALUATION STUDIES

6.1 PAVEMENT CONDITION SURVEY

6.1.1. Pavement Condition Survey using Network Survey Vehicle (NSV)

Network Survey Vehicle (NSV) was carried out by the Company for the assessment of detailed condition survey of existing pavement. Both extent and severity of different pavement distresses such as cracks, rutting, potholes, ravelling, edge break, delamination, patching, shoving, bleeding, etc. were recorded at 10m intervals for each lane by the NSV. The pavement distresses were categorized into three levels of severity: Low, Medium, and High. The following types of pavement distress and details were captured using NSV.

6.1.1.1. Roughness

Roughness is one of the important parameters for determining the functional characteristics of pavements. According to the American Society for Testing and Materials (ASTM), roughness is defined as "the deviations of a pavement surface from a true planar surface with characteristic dimensions that affect vehicle dynamics, ride quality, dynamic loads, and drainage, for example, longitudinal profile, transverse profile, and cross slope".

The roughness of road surfaces is measured using different equipment/techniques such as rod and level survey, dipstick profiler, profile graphs, response type road roughness meters, and profiling devices. Table 6-1gives details of surface riding quality evaluation criteria as per standard codal provisions.

Table 6-1 : Roughness Index Criteria

Condition	Roughness Range BI (in mm/km) for Bituminous Concrete Surface
Good	<2000
Average	2000-2400
Poor	More than 2400

However, as per schedule K of contract stretches reporting roughness value of more than 2500 mm/km are to be improved for riding quality with suitable overlay. The same criteria is used for developing improvement proposal for stretch.

A summary of length falling under various categories of roughness as per standard code is given in Table 6-2. As per the Table, 70.5Km on LHS and 73.5 on RHS, the roughness is less than 1800 mm/km, which shows mostly the pavement is functionally in good condition. Over 5Kms length the roughness is in between 1800 to 2400mm/km, that is in average condition. On the whole, the functional condition of the pavement is good and it does not require immediate overlay. A detailed roughness survey results is given in **Annexure 6.1.**

Table 6-2 :Direction-wise Roughness Distribution

Condition	Roughness	LHS (km)	RHS (km)
Good	<1800	70.5	73.5
Average	1800-2400	4	1
Poor	More than 2400	0	0

6.1.1.2. Rutting

Rutting is one of the important factors which determine the functional performance of the pavement. Rutting is characterized by permanent deformation of the pavement in the wheel path either due to failure of asphalt concrete mix or any of the pavement layer. Rutting is expressed in mm. Criteria for rutting is given in the Table 6.3.

Table 6-3 : Rut Depth Criteria

Condition	Rut Depth (mm)
Good	<5
Average	5 to 10
Poor	>10

The rut depths observed on LHS and RHS are presented in Table 6-4 As per Table, the rutting is less than 5mm on most of the length on both LHS and RHS (Total 129 Kms) and rutting is average on 5Kms length. Over entire length of the pavement, rutting is less than 10mm, which comes under low severity. The rectification consists of filling of ruts with premix (open-graded or dense-graded) patching materials and compacting to the desired levels.

Table 6-4 :Direction-wise Rutting Distribution

Condition	Rut Depth (mm)	LHS (km)	RHS (km)
Good	<5	68.5	68.5
Average	5 to 10	5	5
Poor	>10	0	0

6.1.1.3. Cracking

Cracking of bituminous surfacing is a common distress seen on majority of roads with the passage of time. Cracks in bituminous surface are classified into various types depending upon severity. Immediate attention must be given for sealing of cracks, and prevention of their further widening as ingress of water through cracks is detrimental to pavement structure and performance of bituminous surfacing. The cracking is represented in terms percentage of area and its trigger values are given in the Table 6-5.

Table 6-5 : Cracking Criteria

Condition	cracking
Good	<5%
Average	5% to 10%
Poor	>10%

The area of cracking observed on LHS and RHS are presented in the Table 6-6. As per the Table, pavement classified as good in terms of cracking. It was observed low severity hairline cracking on the pavement surface at isolated locations which need to be rectified by crack sealing.

Table 6-6 :Direction-wise Cracking Distribution

Condition	cracking	LHS (km)	RHS (km)
Good	<5%	74.5	74.5
Average	5% to 10%	0	0
Poor	>10%	0	0

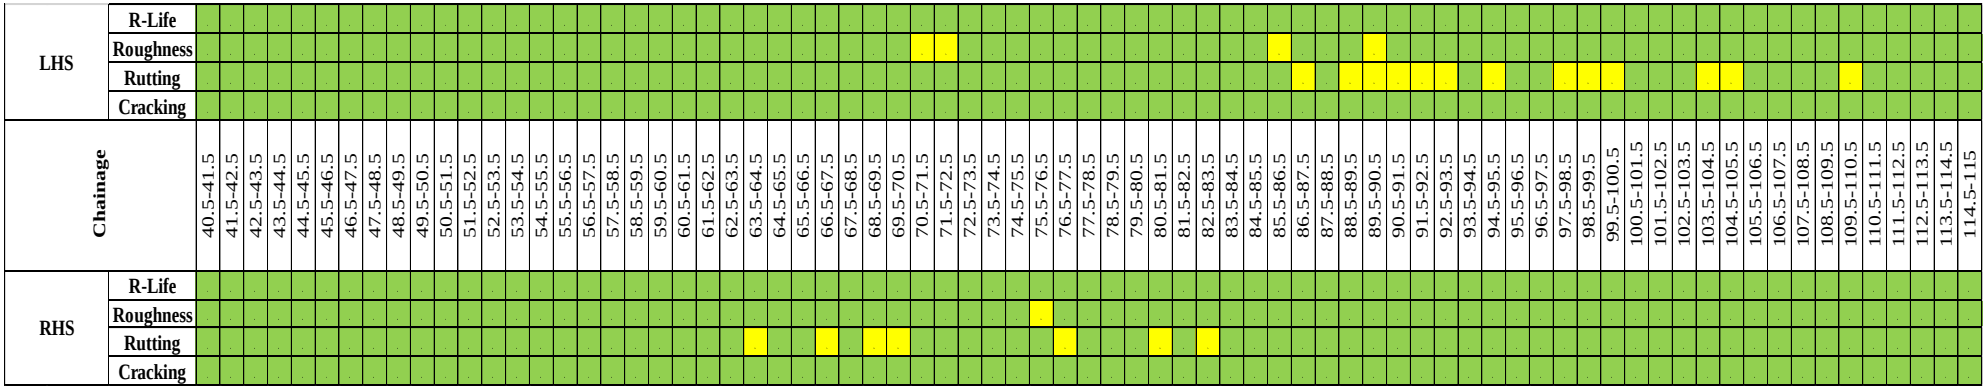
6.2 PAVEMENT CONDITION VISUAL SURVEY

Our team have visited the site in the month of November for incremental study and done a visual survey of pavement condition and found the pavement to be in Good condition for most of the project length as the overlay has been completed recently, except for 3-4 kms of length where the pavement is Fair with some cracking and rutting. No immediate repairs are required for the pavement.

6.3 PAVEMENT CONDITION MAPPING

Based on the pavement investigation survey results (NSV Survey and FWD Survey and Visual Survey), the section along the Project Stretch were classified as Good, Fair and Poor with appropriate colour as below:



Condition	Colour Adopted
Good	
Fair	
Poor	

6.3.1. Distress Identification for Immediate Repair

The main carriageway is recently overlaid, and no major distresses were observed on the project stretch on both LHS and RHS. However, at a few locations minor distresses, which are discussed above are identified and they require treatment to avoid further progress. The detailed inventory of Pavement distresses by NSV is given in **Annexure 6.2.** Photographs of surface pavement condition were shown in Photo 6.1.

Good pavement at Ch. 61+600 on LHS	Good Pavement at Ch.84+000 on RHS
Good pavement at Ch.101+000 on LHS	Good pavement at Ch.108+500 on LHS

Photo 6.1: Representative Photos of Pavement Condition and Surface Distress

6.3.2. Estimated Design Traffic

The design traffic is considered in terms of the cumulative number of standard axles in both directions of the carriageway during the design life of the road. This can be computed using the following equation:

$$N = \frac{365 \times [(1+r)^n - 1]}{r} \times A \times D \times F$$

where N is the cumulative number of standard axles to be catered for the design in terms of Million Standards Axle (MSA), A is the initial traffic in terms of the number of commercial vehicles per day, D is the lane distribution factors, F is the vehicle damage factor, n is the design life in years, and r is the annual growth rate of commercial vehicles. The traffic in the year of completion is estimated using the following formula:

$$A = P (1 + r) x$$

Where P is the number of commercial vehicles as per the last count, and x is the number of years between the last count and the year of completion between the last count and the year of completion of the project.

Consultant enquired about the VDF values for the projection of Design Traffic. However, in the absence of data, we have assumed VDF based on the axle load spectrum.

Table 6-7 : Adopted VDF at Km 100.600

Particulars	Adopted VDF
Bus	1.00
LCV	0.5
2Axle	2.25
3Axle	3.50
MAV	6.50

Base traffic for MSA calculation has been adopted from traffic report of independent engineer. The projected traffic is furnished in the Table 6-8. As per table, design traffic at the end of the concession period is 12 MSA and after 10 years, that is the overlay period is 24 MSA.

Table 6-8 : MSA at Km 100.600

Year	LCV	Bus	2-Axle	3-Axle	>3-Axle	VDF x ADT	MSA	Cumulative MSA

6.4 STRUCTURAL EVALUATION OF PAVEMENT BY USING FWD

The structural evaluation and analysis of remaining life of project was carried out in conformity with IRC: 115-2014, "Guidelines for Structural Evaluation and Strengthening of Flexible Road Pavements Using **Falling Weight Deflectometer (FWD)** Technique".

6.4.1. Principle of Pavement Evaluation Using FWD

Performance of flexible pavements can be evaluated by applying loads on the pavements that simulate the traffic loading, recording the response to such loading by measuring the elastic deflection under such loads, and analysing these data duly considering the factors influencing the performance such as subgrade strength, thickness and quality of each of the pavement layers, drainage conditions, pavement surface temperature etc.

Among the equipment available for structural evaluation of pavements, the Falling Weight Deflectometer (FWD) is extensively used world-wide because it simulates, to a large extent, the actual loading conditions of the pavement. When a moving wheel load passes over the pavement it produces load pulses. Normal stresses (vertical as well as horizontal) at a location in the pavement will increase in magnitude from zero to a peak value as the moving wheel load approaches the location. The time taken for the stress pulse to vary from zero to peak value is termed as 'rise time of the pulse'. As the wheel moves away from the location, magnitude of stress reduces from peak value to zero. The time period during which the magnitude of stress pulse varies from 'zero-to-peak-to-zero' is the pulse duration. Peak load and the corresponding pavement responses are of interest for pavement evaluation.

The resulting load-deflection data can be interpreted through appropriate analytical techniques, such as back calculation technique, to estimate the elastic moduli of the pavement layers. The computed moduli are, in turn, used for (i) the strength evaluation of different layers of in-service pavements (ii) the estimation of the remaining life of in-service pavement (iii) determination of strengthening requirement, if any and (iv) evaluation of different rehabilitation alternatives (overlay, recycling, partial reconstruction, etc).

6.4.2. Methodology of Falling Weight Deflectometer

Falling Weight Deflectometer is a non-destructive pavement testing device which provides relatively accurate data on the response of the pavement (specifically the surface deflection bowl) to dynamic loads by simulating actual wheel loads in both response and duration. This allows more accurate and rapid measurement of pavement deflection under load than traditional methods like BBD.

A dynamic load is generated by the dropping of a mass from a pre-set height onto a 300 mm diameter plate. The magnitude of the load and the pavement response are measured by a load cell and nine geophones. One geophone is located immediately under the load, whilst the others are located at variable offsets from the centre of the load. The test load is varied between 7 and 150 KN to meet the requirements of the particular task and the pavement response for up to four different magnitudes of load are measured during any test sequence. The offsets of the geophones can be set to any distance up to 1800 mm from the centre of the load and a typical sequence is completed in approximately one minute. Highly accurate deflection bowl measurements are therefore obtained; therefore, it is very useful for carrying out large-scale pavement surveys.

The FWD is integrally mounted on a Trailer which is towed by a dedicated vehicle. All testing is controlled by a personal computer which is located in the vehicle towing the FWD. As a result, only one operator is required to conduct a survey on most occasions making it less labour/ equipment intensive than traditional methods. Following is the typical process of FWD survey and investigation.

Photo 6.2: Photographs showing FWD test under progress

Also, during survey, pavement temperature of bituminous layer has been recorded as per the procedure specified in section 5.4.7 of IRC: 115-2014.FWD data collected and analysis is presented in **Annexure 6.3**. Photographs of FWD test under progress at some locations were shown in Photo 6.2

6.4.3. Working Principle

- A set of weights is dropped onto a platform with springs (rubber buffers) and the impact load is transferred to the pavement through a loading plate.
- The load simulates the dynamic load from a truck.

- Normally, the load applied on road pavements is 40 kN.
- When subjected to a load, the pavement will bend, and a deflection bowl is created. The deflections at various distances from the loading centre are recorded by the sensors (geophones) and stored in a data file.

6.4.4. Survey & Data Collection

Survey and data collection using FWD includes typically the following.

- Preparing the FWD unit for deflection testing
- Bringing the FWD to a stopped position at the beginning of the test section, centered on the outside wheel path (or specific position), and take a measurement by applying load using following sequence:
- One settling drop to ensure proper contact.
- Three drops with an applied load of 40 KN ± 10% (or Specified Load).
- Deflections are recorded from the sensors located at the center of the loading plate for each drop except the settling drop.
- Along with these deflection data, the parameter like Chainage, Temperature, Date and Time and position of Sensors will also be recorded.
- After each measurement, drive the FWD forward to next measurement point.

Analysis Stages:

Analysis including back calculation of layer moduli and remaining life analysis is done on the basis of standard procedure and guidelines as give in IRC - 115 and KGPBACK and presented below.

6.4.5. Determination of Structural Strength of Pavement using FWD and Remaining Life Analysis

Pavement structure is typically composed of several layers of different material, each of which receives the loads from the above layer, spreads the load, and then passes the load to the layer below. Material layers are usually arranged with in a pavement structure in order of descending load bearing capacity with the highest load bearing capacity material on the top and the lowest load bearing capacity material on the bottom. In general pavements should be designed to perform satisfactorily without developing unacceptable levels of distresses during the design life period. The structural adequacy of the existing pavement is demonstrated based on the study of structural performance of the pavement. If a pavement shows load associated distress like fracture, permanent deformation etc., then it is considered to have failed structurally. To ensure that unacceptable levels of distresses do not occur during design period, the critical strains developed under the load should be less than the limiting strain values corresponding to the design traffic selected. Structural evaluation of pavements involves application of a standard load to the pavement

and measuring its response in terms of stress, strain or deflection. Among the equipment available for structural evaluation of pavements, the Falling Weight Deflectometer (FWD) is extensively used world-wide because it stimulates, to a large extent, the actual loading conditions of the pavement. The resulting load-deflection data can be interpreted through appropriate analytical techniques, such as back calculation technique, to estimate the elastic module of the pavement layers. The computed module is, in turn, used for

i. The strength evaluation of different layers of in-service pavements
ii. the estimation of the remaining life of in-service pavement
iii. determination of strengthening requirement, if any and
iv. Evaluation of different rehabilitation alternatives (overlay, recycling, partial reconstruction, etc.).

The guidelines for the test and evaluation of structural condition of in-service pavements are detailed in IRC- 115:2014. The test was carried out using 300mm diameter plate and standard load of 40KN (+/-4KN). The deflections were measured at 7 points, each at a radial distance of 0, 300, 600, 900, 1200, 1500, and 1800 (all mm). The pavement layer thicknesses of Bituminous and Granular layers were obtained from the test pits as given above.

6.4.6. Analysis Methodology

This section provides detailed procedure for the evaluation of structural condition of in-service pavements using deflection data from Falling Weight Deflectometer as well as other pavement data as inputs to a back-calculation model for determining the elastic module of pavement layers, and, thereafter, using these modules as inputs to a pavement design model for estimating the overlay requirement.

Accordingly, the sequence of analysis steps as per the IRC: 115-2014 is as follows

1.The recorded data will be normalized to a standard load of 40 KN.

2.The normalized deflections will be then processed and back calculated using KGPBACK to obtain Elastic Modulus values of Bituminous, Granular layer and Sub-grade.

3.The corrections factors for temperature correction sand seasonal variations will be applied to all layers as suggested in IRC: 115-2014.

4.Preparation of Homogenous sections and selecting 15^{th} percentile Module values for the purpose of design.

5.Checking the in-service ability of the Pavement layers through Performance criteria-analysing the Remaining life. Sequence of FWD data analysis and snapshot of applications used for analysis are presented in figures below.

Sequence of FWD data analysis and snapshot of applications used for analysis are presented in figures below.

6.4.7. Procedure

The FWD measurements have been carried out at slow lane and fast lane respectively in the provided stretches.

Deflections measured by the FWD equipment are influenced by pavement temperature. Measurements made when the pavement temperature is different than standard temperature has be corrected. The deflection measurements, pavement temperature, subgrade soil & deflection, and other information collected during the deflection study have been recorded.

Following procedure has been followed for measurement of FWD:

- The test location is marked on the field.
- The loading plate along with the deflection sensors have been lowered at the test location

- The target load has been applied and the deflections have been measured for 3 times.
- The first load is considered as a seating load and the values are not considered for analysis.

Temperature Measurement & Correction

The standard temperature for doing the experiment is 350C. Since it is always not possible to conduct the test at the standard temperature, a correction factor has to be applied for the deflection. The correction factor is determined by knowing the temperature at the time of the survey. The pavement temperature during the survey has been measured at every one-hour interval by drilling a hole of 40mm in the pavement and filling it with glycerol and measuring the temperature using digital thermometer. The temperature correction factor applied on bituminous back calculated moduli is calculated as

$$ET1 = \prod ET2$$

Where,

$\prod$, temperature correction factor, is given as

$$\prod = 1\text{-}0.238 \ln T1 / 1\text{-}0.238 \ln T2$$

Where,

ET1 = back calculated modulus (MPa) at temperature T1 (°C)

ET2 = back calculated modulus (MPa) at temperature T2 (°C)

Correction for Seasonal Variation

Moisture content affects the strength of subgrade and granular subbase/base layers. The extent to which the strength is affected will depend on the nature of subgrade soil, gradation and nature of fines in the granular layers, etc. For the purpose of applying these guidelines, it is intended that the pavement layer moduli values should pertain to the period when the subgrade is at its weakest condition. In India, this period occurs during the recession of monsoon. It is, therefore, desirable to conduct deflection measurements during this period. Where the same is not feasible, a correction procedure should be adopted. The correction factor for subgrade and base is as

- **Correction factor for subgrade**

  E sub_mon = 3.351* (E sub_win) ^ (0-7688)-28.9

  E sub_mon = 0.8554*(E sub_sum) - 8.461

  where,

  E sub_mon = subgrade modulus in monsoon (MPa)

  E sub_win = subgrade modulus in winter (MPa)

  E sub_sum = subgrade modulus in summer (MPa)

- **Correction factor for granular layers**

  E gran_mon = - 0.0003 *(E gran_sum) ^ 2 + 0.9584* (E gran_sum) - 32.989

  E gran_mon = 10.5523 *(E gran_win) ^ 0.624 – 113.857

  where, E gran_mon = granular layer modulus in monsoon (MPa)

E gran_win = granular layer modulus in winter (MPa)

E gran_sum = granular layer modulus in summer (MPa)

6.4.8. Back Calculation to Obtain Resilient Modulus of Existing Layers

Software used:

KGPBACK – Genetic Algorithm based software for back calculating the layer moduli. Works on three-layer system (Bituminous, Granular & Subgrade).

Data required:

- Deflections at various radial distances.
- Existing layer thickness – the existing layer thicknesses of various stretches have been obtained from the test pit.
- Layer moduli range – the layer moduli adopted for the analysis is shown in next section
- Poisson's ratio: BT-0.35, Granular-0.35, Subgrade-0.35 (For Back calculation).

Table 6-9 : Range of module (MPa)

Type of Layer	Lower and Upper Limit (Mpa)
Subgrade	75 to 100
Granular	250 to 500
Bituminous	1250 to 2500

6.4.9. Data Analysis

Resilient Moduli of each layer are calculated using KGPBACK for each test point. The summary of back calculated and corrected modulus of the all the three layers are presented in the following table for LHS (Hazaribagh to Ranchi) pavement.

Table 6-10 : L.H.S 15th percentile corrected Back Calculated Module (MPa)

6.4.10. REMAINING LIFE AND OVERLAY ESTIMATION

The in-service three-layer pavement system has been analysed with the 15th percentile back-calculated corrected layer moduli and layer thicknesses. The critical strains have been calculated using IITPAVE program. From the performance criteria equations, the residual/remaining rutting and fatigue life has been estimated.

6.4.11. PERFORMANCE CRITERIA

The layer moduli of in-service pavement back calculated from FWD deflection data are used to analyse the pavement for critical strains which are indicators of pavement performance in terms of rutting and fatigue cracking. The remaining life of pavement can be obtained using the Fatigue and Rutting criteria mentioned in IRC – 115:2014 and in IRC-37:2018, the same approach can be used for design of bituminous overlays for existing flexible pavements. The performance models are as follows.

Fatigue in Bituminous layer:

As specified in IRC-115, the fatigue model for 90 percent reliability is given below

$$Nf = 0.711 * 10^{-04} \times [1/\varepsilon t]^{3.89} * [1/MR]^{0.854}$$

Where, Nf = fatigue life in number of standard axles,

εt = Maximum Tensile strain at the bottom of the bituminous layer

MR= resilient modulus of the bituminous layer.

Rutting in Subgrade:

Rutting model for 90 percent reliability level as specified in IRC: 115-2014 was used as below;

$$N = 1.41 \times 10\text{-}08 \, [1/\varepsilon v] \, 4.5337$$

Where, N= Number of cumulative standard axles,

εv= Vertical strain in the subgrade.

Table 6-12 : Remaining Life of Existing Pavement-LHS

The calculated remaining life presented in the Tables 6-13 and 6-14 vary over the length of the project road in spite of the same traffic and pavement composition. It differs from 28.4 to 253.6 MSA and 28 to 236.8 MSA along LHS and RHS respectively. It is due to higher deflection value at isolated locations over one Km length, which gives lower modulus values. Since the IRC 115 guidelines suggest considering the 15th percentile modulus value for estimating the remaining life, generally lower modulus value shall be used, which gives less remaining life. The design traffic estimated at the end of the concessionaire period 2028 is 12MSA and after 10 years (period considered for an overlay) of life is 24 MSA and this value is compared with the remaining life of the pavement. As the remaining life is more than design MSA, the pavement is structurally adequate and does not require immediate overlay.

CHAPTER 7. PAVEMENT DESIGN AND O&M STRATEGY

7.1 PAVEMENT DESIGN

Flexible pavement is adopted in entire stretch of road except locations where existing pavement was concrete pavement. Pavement design of project is done in accordance with provision of IRC-37 (Flexible Pavement). Details of pavement design are discussed in separate chapter dedicated to subject.

Pavement design is basically interplay between ground strata strength and traffic loading on pavement. Pavement design has been reviewed in light of above.

A. Soil Strata

Various tests were conducted to determine the physical and strength properties of the subgrade soils and based on that the soils are classified as clayey sand, which is good material for the subgrade. The CBR value of subgrade soil was found more than 10%.

B. Traffic Loading

As per the manual of Four Laning (IRC: SP-84- "IRC-SP-84-2009_Manual of Specification and Standards for Four Laning of Highways", flexible pavement is to be designed for the minimum design period of 15 years or an operation period whichever is more.

The date of Signing of the Concession Agreement is 08th October 2009 and the concession period is 18 years. Hence project operation would continue up to 2028-2029.
It is reported that the following pavement (widening and reconstruction) has been adopted for the project stretch.

- GSB-250 mm
- WMM- 250 mm
- DBM-120 mm
- BC-50 mm

From above it can be observed that pavement provisions are for about 110 MSA on 10% CBR for entire design life as per IRC:37 2001. Hence can be taken as adequate.

Structure Design –

The ground strata of area are good and good bearing capacity is available at variable depth. There are 1 Major bridge, 3 ROBs and 9 Minor bridges. Design of all structure were approved by IE before awarding COD.

7.2 PAVEMENT REPAIR AND REHABILITATION

The work of pavement overlay is almost near completion and milling has also been considered at various locations and the details of BC and DBM overlay are as under:

Table 7-1 : BC Overlay Locations

Sr. No.	Side	Type of Road	Chainage		Length (Mtr)	Width (Mtr)	Thickness (Mtr)

Table 7-2 : DBM Overlay Locations

Sr. No.	Side	Type of Road	Chainage		Length (Mtr)	Width (Mtr)	Thickness (Mtr)
			From	To			
1	LHS	MCW	084+464	084+683	219	3.5	0.06
2	LHS	MCW	087+160	087+304	144	4	0.06
3	LHS	MCW	113+630	113+658	28	4.0	0.06

Road Marking is also considered for the above-mentioned locations.

7.3 IMMEDIATE REPAIR/ REHABILITATION WORK

As it's specified in chapter6, the present condition of the pavement is good and no distresses were observed. Hence, no immediate repair/ rehabilitation work is required for Main carriage way.

Since there is no overlay laid on the service road, the structural overlay of 30mm thick BC has been proposed in the year 2024.

7.4 MAJOR MAINTENANCE SCHEDULES

7.4.1. Major Maintenance (Structural Overlay)

As it is explained in the earlier sections, the pavement is designed for the full concession period. The remaining life of pavement was evaluated by using FWD technique in April 2023 and the same is presented in Table 6.12 & Table 6.13 of Chapter-6 for both the carriageways.

Table 7.3 The remaining life of pavement as per April 2023 is summarized below

Direction	Remaining Life (MSA)		
	Minimum	Maximum	
LHS direction	**28.4**	**253.6**	
RHS direction	**28.0**	**236.8**	

Future periodic intervention is planned on the basis of projected MSA and remaining life of pavement taking original crust design and major repair into consideration. Following table summarize location wise periodic interventions during concession period of project.

Table 7.4 Major Maintenance requirement

Overlay	Year		Remarks
Periodic overlay	**2024**	Service Road (SR)	Bituminous Concrete (BC) -30mm thick
Periodic overlay	**50% of work in financial year 2027-2028** **50% of work in financial year 2028-2029**	Main Carriageway and intersections, truck lay bye, bus bays -	Bituminous Concrete (BC) -30mm thick. Bituminous Concrete (BC) -40mm thick.*****
		Service Road (SR)	Bituminous Concrete (BC) -30mm thick.

* 40mm thick BC proposed at the locations where the remaining life of existing pavement (MSA) less than 40 MSA. As per the Table 6.14 and Table 6.15 of chapter -6 the no of locations where existing pavement (MSA) less than 40 MSA were given below.

Direction	Length	Length considered
LHS	Around 25 Km	Overlay work is in the progress and after completion of that the length will be less. However, length considered 15 Km same as like RHS.
RHS	Around 15 Km	15 Km

CHAPTER 8. COST OF MAJOR REPAIR AND BALANCE WORK

8.1 GENERAL

The project road, Hazaribagh to Ranchi section of NH-33 from km 40.500 to Km 114.000 is under traffic operation and four laning had been completed. Road pavement and other elements have deteriorated in some parts of the stretch and repair of the same is in progress. There are a few minor items that are still to be completed. The cost of such balance works and the cost of major repairs required to bring the project to specification is given in this chapter. The cost has been worked out / verified in the following heads.

8.2 COST OF MAJOR REPAIR WORKS

Design of major repair works has been presented in chapter 4 of this report. As per the analysis major repair of pavement is required on account of following.

- Structural deficiency in pavement (FWD analysis)
- Surface distresses (Visual Inventory)
- Riding Quality (Roughness Index by NSV)

The project stretch is in Good Condition and there is no requirement of major repair for pavement on the project stretch as overlay is already in progress.
Cost of improvement of structures is nominal. Same is given in table as under.

Table 8-1 : Summary of cost for Structure Routine Maintenance

Item	Amount (Rs.)
ROB	4,64,298
Major Bridges	9,54,159
Minor Bridges	13,94,459
Vehicular Underpass	14,400
Pedestrian Underpass	2,343
Structures O&M	**28,29,659**

CHAPTER 9. OPERATION & MAINTENANCE REQUIREMENT

9.1 GENERAL

Operation & Maintenance requirement of project stretch is assessed in the following heads

A. Routine Operation and Maintenance

B. Periodic Operation and Maintenance

Regular maintenance consists of primarily highway maintenance, which covers correcting pavement surface distresses, shoulders, traffic amenities and systems, structures, median, plantation, maintenance Highway patrolling and surveillance, accident management etc. Toll operation is not in Concessionaire scope this being an Annuity based contract.

At certain periods, elements like pavement, structures, etc require major maintenance in the form of overlays, replacement, etc. These come under periodic maintenance.

The cost of such regular and periodic maintenance is worked out and has been given in subsequent sections of this chapter.

9.2 ROUTINE OPERATION & MAINTENANCE

Cost of Operation and Maintenance of project is worked out based on information gathered from site visits, document study and good industry practice in area. Details of same is given as under

9.2.1. Toll Operation

Project road has one toll plazas at km 100+600 at Pundag.

The project is on a hybrid annuity basis hence Toll Plaza operation is not in the concessioner's scope. However other operations and maintenance related to highways are in the concessionaire's scope and same is given in subsequent sections.

9.2.2. Route Maintenance

Route maintenance covers maintenance items like cleaning, watering of plans, repair of shoulders, cutting of grass/shrubs, and patrolling the project for any untoward accidents/issues. Resources for this would consist of basically manpower, vehicles, and tools. It does not include any major damage repair. The estimated cost of annual route maintenance is given as under separately for machine and manpower. Repair& maintenance covers repairs of markings, signage, safety items, potholes, damages, structure maintenance, etc. The items and quantum of work can vary on a year-to-year basis depending on the nature of damage and repair required. Besides regular maintenance of roads, there will be periodic repairs in the form of major overlays and strengthening of pavement.

9.2.3. Projected Routine Operation and Maintenance

Routine Maintenance will consist of primarily following cost

- Road Property Management
- Highway Maintenance

- Routine maintenance
- Incident management
- Miscellaneous
- Structure Routine Maintenance
- IE Fee

Summary cost of routine maintenance is shown in table below.

Table 9-1 : Routine Maintenance cost summary

DESCRIPTION	AMOUNT IN RS.
Highway Maintenance	2,19,08,464
Road Property Management	82,27,537
Routine Maintenance	55,45,015
Incident Management	2,34,96,000
Miscellaneous	94,76,400
Structure Routine Maintenance	28,29,659
Total Cost of Project routine maintenance for the year 2023- 2024 in Rs	**7,14,83,075**

While working above costs, expenses have been taken judiciously to optimize the cost. Break up of above cost is provided in excel sheet provided along with the report in soft copy.

9.3 PERIODIC OPERATION AND MAINTENANCE

Periodic operation and maintenance cost mainly consist of structural overlays on pavements, major repairs and replacements of expansion joints and bearing of structures and some other minor costs like replacements of toll plaza tools and equipment's.

While assessing the major repair cost of pavement with the help of FWD data analysis repair intervention was designed on the basis of remaining life of pavement.

Future periodic intervention is planned on the basis of projected MSA and remaining life of pavement taking original crust design and major repair into consideration. Following table summarises location wise periodic interventions during concession period of project.

Cost of Periodic Maintenance is given as below.

Table 9-2 : Cost of Periodic Maintenance at price escalation

Year	Periodic Maintenance Cost (Rs.)
Oct 2023 - March 2024	1,86,04,539
2024-2025	3,71,15,783
2025-2026	Nil
2026-2027	Nil
2027-2028	41,98,93,627
April 2028 - July 2028	43,39,11,228

9.4 TOTAL COST OF OPERATION AND MAINTENANCE

Total cost of operation and maintenance consist of both regular and periodic maintenance. Combined Operation and Maintenance Expense with escalations and GST is given in Table 9-3.

Table 9-3 : Summary of Project Operation and Maintenance cost [inclusive of GST 18%]

Year	Routine Maintenance	Insurance	LIE fee	Electricity cost	Periodic Maintenance	IE Fee	Total O&M Cost
Oct 2023- Mar 2024	4.22	0.31	0.28	0.60	1.86	0.46	7.73
2024-2025	8.86	0.64	0.59	1.26	3.71	0.97	16.03
2025-2026	9.30	0.67	0.20	1.32		1.01	12.50
2026-2027	9.76	0.71	0.20	1.39		1.06	13.13
2027-2028	10.25	0.74	0.69	1.46	41.99	1.12	56.25
Apr 2028-2028 July	3.59	0.26	0.24	0.51	43.39	0.39	48.38
						O&M Cost =	**154.02 Cr**

Note: The client will pay 2% of Major/Periodic maintenance cost for supervision or PMC fee.

3.1 STATUS OF KEY PERSONAL AND PLANT & MACHINERY AT SITE

(A) Details of Key Personal available at Project Site

Sr. No.	Key Personal	Nos.	Remarks
1.	O&M Engineer	2	
2	HTMS Engineer	1	
3	Officer (Documentation)	1	
4.	Route Patrolling Officers	5	
5.	O&M Supervisors	3	
6.	Paramedical Officers	7	
7.	Drivers/Operators	28	

B) Details of Equipments available during the month of January 2023.

Sl No.	Machinery/Equipment	Registration No.	Nos. Mobilized	Remarks
1	Route Patrolling Vehicle	JH-10AG-4097, WB-37C-8897	2	Hired
2	Crane	WB-39-5089 NL 02G 6517	2	Hired
3	Ambulance	JH09L-4615, JH-10R-6500, JH10-W-4372	3	Hired
4	Tractor Trolley	JH 01AQ 6997, JH-01AR-1864	2	Hired
5	Utility Vehicle	JH-01EM-0586	1	Hired
6	Grass Cutter		5	Owned
7	Hydra	JH-01CJ-4817	1	Hired
8	Tractor Mounted Broomer Machine	JH-20C-9020 JH-24E-6271	2	Hired
9	Water Tanker	JH-01AN-6085 JH-01AF-9047	2	Hired
